Internationale Deutsche Schule Sarajevo

PU Internationale Deutsche Schule Sarajevo -
International German School Sarajevo

ANNUAL TEACHING PLAN AND PROGRAM

2025/2026

Sarajevo, July 2025.

Introduction

In today's educational environment , the goal of teaching is far more than the mere transfer of knowledge. Teaching should be aimed at the comprehensive development of students, including intellectual, emotional and social growth. This Annual Curriculum has been carefully created to ensure a high quality of education, and at the same time it is aligned with the educational standards and methodologies applied in primary and secondary schools in Baden-Württemberg and Thuringia , Germany .

Through this document, an overview of the educational goals and basic principles of teaching, which are aligned with the German educational framework, is provided. Our teaching is not only aimed at mastering school material, but also at developing critical thinking, creativity and problem-solving skills. The introduction of these standards enables our students to prepare for global challenges and achieve high educational results.

The document includes a detailed overview of the structure of the school program, including subject lesson plans, semester plans, electives and technical work and provides clearly defined educational goals, basic teaching principles, educational framework and work methodology . Emphasis is placed on harmonization with the educational standards of Baden-Württemberg and Thuringia , which ensures that the educational standards in our school are aligned with international norms and practices.

Planning and organization of teaching through semester plans, as well as continuous evaluation of student progress, are key components of this document. We pay special attention to special activities and additional supports, including workshops and individual instruction, to ensure that all students have the opportunity to reach their full potential.

Administrative aspects, including the organization of classes and the development of procedures, enable effective management of the educational process, which further contributes to the quality of education. This document is more than plans and goals - it is an inspiration to create an educational environment that allows each student to develop into an educated, self-reliant and responsible being.

Our aim is to provide fundamental resources and support, ensuring that our students are prepared for the successful challenges of the future, in accordance with the highest educational standards.

The annual teaching plan and program was created with the aim of facilitating preparations, establishing clear communication, assigning roles and responsibilities , as well as efficient management of resources throughout the school year.

This document is aligned with the ISO 9001:2015 standard, which we are the holders of, and provides clearly defined educational goals, basic principles of teaching, educational framework and work methodology.

HALLO WIR SIND IDSS

About us

The International German School Sarajevo (IDSS) is a licensed private educational institution that offers preschool and elementary education programs (from I to IX grades), based on the German curriculum and modern educational methodologies. Classes are held in German, but also in English and B/H/S languages. During schooling, students acquire knowledge in different areas and subjects: linguistic-literary-artistic, mathematical-scientific-technical, social sciences and sports. Students who graduate from our school can continue their education in Bosnia and Herzegovina, Germany and around the world. Our curriculum is aligned with the official curriculum in use in Sarajevo Canton.
The average class size is 12 students, and the student-to-teacher ratio is 3:1. We currently have 90 students.
Our story begins in 2011 with the establishment of a Montessori kindergarten, with the vision of providing a stimulating and innovative learning environment for young children. Our commitment to holistic education and child-centered teaching methods quickly caught the attention of the community. As Montessori kindergarten progressed, parents and educators recognized the need for an elementary school that would continue to prioritize individualized learning and foster a love of education.
In 2015, inspired by the success of the Montessori kindergarten, the founder took a bold step and expanded his educational offerings by establishing a German elementary school alongside the existing kindergarten. The German primary school not only aimed to build on the principles of Montessori education, but also to introduce students to the rich language and culture of Germany. With a focus on academic excellence, creativity and global citizenship, the newly established elementary school attracted families seeking a unique and comprehensive educational experience for their children.
Our mission is to provide an exceptional educational experience that nurtures the whole child, cultivates intellectual curiosity, fosters a love of learning, and prepares students for success in a diverse and changing world. Some of our primary goals are:
Providing safe, supportive and inclusive environments where students feel valued, respected and empowered to learn and grow.
Delivering a rigorous and challenging academic curriculum that promotes critical thinking, creativity and problem-solving skills across all subject areas.
Fostering a deep understanding of the German language, culture and history through language immersion and exposure to authentic cultural experiences.
Our vision is to provide exceptional education that equips students to become critical thinkers, lifelong learners, resilient and responsible members of society. Our primary goal is to create a safe, nurturing an environment where students are encouraged to explore their interests , develop their skills and talents, and succeed academically.
Deutsch als Fremdsprache (DaF)
Our DaF program follows a communicative approach aimed at comprehensively developing our students' language skills in listening, speaking, reading and writing. We use a variety of teaching methods and materials to create a dynamic and interactive learning environment that motivates students and builds their confidence.
ISO 9001:2015 and HACCP
By integrating ISO 9001:2015 and HACCP into our daily routine, IDSS demonstrates a strong commitment to maintaining a safe, healthy and high-quality learning environment . These standards reflect our commitment to excellence and proactive approach to ensuring the well-being and satisfaction of the entire school community.

HALLO WIR SIND IDSS

1. Introduction and general objectives

1.1. Legal framework

The scope of work of primary schools in Sarajevo Canton is defined by the Law on Education in Primary and Secondary Schools in Sarajevo Canton (*Official Gazette of Sarajevo Canton No. 27/24*). This law, however, provides limited guidelines for the planning and development of a comprehensive teaching process and basically does not consider the specifics of private institutions dealing with basic education (P 85.20).

That is why our work is based on the Elaboration of the elementary school, which was approved by the Ministry of Education of the Canton of Sarajevo, with the consent of the Government of the Canton of Sarajevo. This study allows us to harmonize our curriculum and process with contemporary global practices and principles, especially those applied in primary and secondary schools in German-speaking countries.

We harmonize our educational program primarily with the one in force in primary and secondary schools in the German federal states of Baden-Württemberg and Thüringen .

In these federal provinces, education in primary and secondary schools is regulated by a series of laws, curricula , guidelines and administrative documents. The key resources that regulate education in these federal countries, and according to which we also organize the work of our elementary school, are:

Baden-Württemberg

1. **Schulgesetz for Baden-Württemberg (Schulgesetz BW)**
   This law defines the general guidelines of the education system, including the organization of schools, the rights and obligations of students, teachers and parents, and the basic principles of education

2. **Bildungsplan for die Grundschule (Bildungsplan Grundschule BW)**
   primary school curriculum that sets standards and objectives for teaching, including subjects and subject areas.

3. **Bildungsplan for die Sekundarstufe I (Bildungsplan Sekundarstufe I BW)**
   Curriculum for the lower grades of secondary schools (Sekundarstufe I), with guidelines for subjects and educational goals for students aged 10 to 16.

4. **Bildungsplan for die Sekundarstufe II (Bildungsplan Sekundarstufe II BW)**
   Curriculum for upper secondary school classes (Sekundarstufe II), which includes preparation for final exams and post-secondary education, for students aged 16 to 19.

5. **Rahmenlehrplan (Rahmenlehrplan BW)**
   A framework curriculum that provides detailed guidelines and standards for teaching in all subjects and levels of education in Baden-Württemberg .

6. **Schulordnung for die Schulen in Baden-Württemberg (Schulordnung BW)**

HALLO WIR SIND IDSS

Rulebook on the organization and management of schools, including rules of conduct , teaching organization and administrative procedures.

Thuringia

1. **Thüringer Gesetz über das Schulwesen (ThürSchulG)**
   The law on education in Thuringia , which regulates the organization of the educational system, rights and obligations in the educational process, and the basic principles of education.

2. **Lehrplan Grundschule Thüringen (Lehrplan Grundschule Thuringia)**
   The curriculum for primary schools in Thuringia , which defines the educational standards and objectives for teaching in primary schools.

3. **Lehrplan Sekundarstufe I Thüringen (Lehrplan Sekundarstufe I Thüringen)**
   Curriculum for the lower grades of secondary schools (Sekundarstufe I), with teaching guidelines and educational objectives for students aged 10 to 16.

4. **Lehrplan Sekundarstufe II Thüringen (Lehrplan Sekundarstufe II Thüringen)**
   Curriculum for upper secondary school classes (Sekundarstufe II), which includes preparation for final exams and further education, for students aged 16 to 19.

5. **Rahmenlehrplan Thüringen (Rahmanlehrplan Thuringia)**
   Framework curriculum for all subjects and levels of education in Thuringia , providing detailed guidelines and standards for the educational process.

6. **Schulordnung Thüringen (Schulordnung Thuringia)**
   Rulebook on the organization and management of schools in Thuringia , including rules of conduct , teaching organization and administrative procedures.

General resources

1. **Kultusministerium Baden-Württemberg (Ministerium for Culture , Jugend und Sport)**
   The official website of the Ministry of Education, Youth and Sports of Baden-Württemberg , which contains additional information and updates on educational standards and guidelines.

2. **Kultusministerium Thüringen (Thüringer Ministry for Bildung , Jugend und Sport)**
   The official website of the Ministry of Education, Youth and Sports of Thuringia , which provides information on educational standards, curricula and recommendations.

3. **Vorgaben und Recommendations (Guidelines and Recommendations)**
   Periodic documents and recommendations from the Ministries of Education that provide additional guidance for educational institutions.

4. **Verwaltungsvorschriften (Administrative Regulations)**
   Instructions and administrative regulations that ensure the consistency and quality of the educational process in schools.

HALLO WIR SIND IDSS

These documents and resources provide a comprehensive framework for education in primary and secondary schools in Baden-Württemberg and Thuringia and it is important to know them in order to ensure that the teaching process in our school is in line with these legislative and curricular standards that we follow.

1.2. Introduction to teaching

Overview of educational goals and basic principles of teaching

Introduction to classes is a fundamental part of our annual plan and program. The purpose of this section is to provide a clear understanding of the educational goals and basic teaching principles that guide the learning process in our school. Our approach is based on the integration of modern educational methods and tools so that students develop the key competencies needed to face the challenges of the 21st century.
Educational goals and teaching principles are defined to support the comprehensive development of students, including intellectual, emotional, social and physical progress. Our school strives to provide an education that is not only informative, but also transformative, enabling students to become active, responsible and creative members of society.

Educational objectives

Developing basic educational competencies

Developing basic educational competencies is a key goal of our program. These competencies include:

1. **Literacy and language skills:**
   - **Aim:** To ensure that students develop strong language skills, including reading, writing, listening and speaking.
   - **Methods:** Using different texts and media, debates, essay writing, creative writing, and language games.
   - **Expected outcomes:** Students will be able to express their thoughts clearly, understand complex texts and communicate effectively in multiple languages.
2. **Mathematical competences:**
   - **Objective:** To develop the ability to understand and apply mathematical concepts and methods.
   - **Methods:** Problem- solving tasks, math games, projects involving calculations, and practical applications of mathematics.
   - **Expected outcomes:** Students will be able to solve complex mathematical problems, apply mathematical skills in everyday situations and develop logical thinking.
3. **Scientific competences:**
   - **Goal:** To encourage scientific literacy and critical thinking through research projects and experiments.
   - **Methods:** Laboratory work, research projects, field research , and use of technological tools.
   - **Expected outcomes:** Students will understand basic scientific principles, be able to conduct research and analyze results, and draw conclusions based on evidence.
4. **Technological competences:**

- **Goal:** To train students for effective use of technology in learning and everyday life.
- **Methods:** Introduction of digital tools in teaching, online research , and projects involving programming.
- **Expected outcomes:** Students will be skilled in the use of information technologies, understand the basic principles of programming and be able to use digital tools to solve problems.

5. **Social and civic competences:**
   - **Goal:** To develop awareness of social and civic issues and encourage active participation in the community.
   - **Methods:** Discussions, debates, social responsibility projects, and volunteering.
   - **Expected outcomes:** Students will understand their rights and responsibilities, be able to critically assess social problems and actively participate in the community.
6. **Culture of consciousness and expression:**
   - **Goal:** To encourage understanding and respect for different cultures and artistic expressions.
   - **Methods:** Introducing cultural studies, art projects, and international exchanges.
   - **Expected outcomes:** Students will develop an awareness of cultural diversity, respect different art forms and express their creativity in different ways.

Developing these basic educational competencies enables students to become self-reliant, responsible and creative individuals who are ready to face the challenges of the future. These goals are the foundation of our educational program and guide all aspects of our teaching process.

Achieving competence in basic subjects
Teaching at our school is aimed at acquiring key knowledge and skills that are the basis for further educational and professional development of students. This goal includes achieving competence in core subjects such as mathematics, languages, natural and social sciences.

Mathematik
Focus on developing skills in basic mathematical operations, problem solving, and understanding mathematical concepts. The subject Mathematik (Mathematics) from grades 5 to 9 is adapted according to the IBMYP curriculum, which includes an interdisciplinary approach, a focus on investigative learning, and the development of critical thinking through mathematical concepts.

1. **Basic math operations:**
   - **Objective:** Students will master basic arithmetic operations such as addition, subtraction, multiplication and division.
   - **Methods:** Using manipulative materials, interactive games, and digital tools for hands-on learning.
   - **Expected outcomes:** Students will be able to accurately perform basic operations and apply them in different contexts.
2. **Troubleshooting:**
   - **Objective:** To develop the ability to analyze problems, create a solution plan and implement solutions.
   - **Methods:** Using real problems, group work, and project-based learning.

- **Expected outcomes:** Students will be able to identify problems, develop strategies to solve them and evaluate the effectiveness of their solutions.

3. **Understanding math concepts:**
   - **Goal:** Increase understanding of abstract mathematical concepts, such as geometry, algebra, and statistics.
   - **Methods:** Visualization, simulations, and use of technological aids.
   - **Expected outcomes:** Students will be able to apply mathematical concepts in different situations, and develop logical and critical thinking.

Sprachfächer (Language subjects)
Increasing reading, writing, speaking and listening skills, as well as developing language expression and communication skills.

1. **Reading:**
   - **Objective:** To develop the ability to analyze and interpret different types of texts.
   - **Methods:** Reading books, articles, and poetry, and discussion about what was read.
   - **Expected outcomes:** Students will be able to understand and critically analyze texts of different genres.
2. **Writing:**
   - **Objective:** To improve writing skills through a variety of forms, including essays, reports, and creative writing.
   - **Methods:** Regular writing, feedback from teacher, and peer review .
   - **Expected outcomes:** Students will be able to clearly and accurately express their thoughts in writing.
3. **Speaking and listening:**
   - **Objective:** To increase the abilities of verbal communication and active listening.
   - **Methods:** Debate clubs, presentations, and listening to audio material.
   - **Expected outcomes:** Students will be able to effectively communicate and interpret verbal information.
4. **Learning grammar and vocabulary:**
   - **Goal:** Master grammatical structures and expand vocabulary.
   - **Methods:** Grammar exercises, learning new words through context, and using digital tools for language learning.
   - **Expected outcomes:** Students will be able to use correct grammar and rich vocabulary in writing and speaking.

Naturwissenschaften (Natural Sciences)
Understanding of basic scientific principles, experimental research and application of scientific knowledge.

1. **Basic scientific principles:**
   - **Objective:** Students will understand the basic principles of physics, chemistry and biology.
   - **Methods:** Lectures, laboratory exercises, and practical experiments.
   - **Expected outcomes:** Students will be able to explain basic scientific concepts and apply them in different situations.
2. **Experimental research:**
   - **Objective:** To develop the skills of planning and conducting experiments and analyzing the results.

- **Methods:** Using laboratory equipment, conducting experiments, and writing laboratory reports.
- **Expected outcomes:** Students will be able to independently conduct research and interpret the results.

3. **Application of scientific knowledge:**
   - **Goal:** To encourage students to apply scientific knowledge in everyday life.
   - **Methods:** Projects that connect science with real problems, field research , and an interdisciplinary approach.
   - **Expected outcomes:** Students will be able to recognize and use scientific principles to solve practical problems.

Gesellschaftswissenschaften (Social Sciences)
Developing an understanding of social structures, historical events and cultural phenomena.

1. **Social structures:**
   - **Objective:** Students will understand different social structures and their functions.
   - **Methods:** Case studies, simulations and group discussions.
   - **Expected outcomes:** Students will be able to analyze social structures and their effects on individuals and communities.
2. **Historical events:**
   - **Objective:** To develop the ability to analyze historical events and their consequences.
   - **Methods:** Analysis of primary and secondary sources, historical simulations, and projects.
   - **Expected outcomes:** Students will be able to critically consider historical events and understand their long-term consequences.
3. **Cultural phenomena:**
   - **Goal:** To increase awareness of cultural phenomena and their impact on society.
   - **Methods:** Learning through the arts, cultural studies, and international exchanges.
   - **Expected outcomes:** Students will develop an understanding and respect for cultural diversity.
4. **Analysis and interpretation of social and historical contexts:**
   - **Objective:** To encourage students to analyze and interpret social and historical contexts.
   - **Methods:** Critical reading, discussions, and writing research papers.
   - **Expected outcomes:** Students will be able to analytically approach social and historical issues, and create informed and reasoned interpretations.

This comprehensive approach enables our students to gain a deep understanding of core subjects, develop key competencies and prepare for successful continued education and professional development.

Achieving competencies for each subject
Our school strives to provide a comprehensive education that enables students to acquire key competencies in various areas. Each course has specific goals and methods that encourage the development of competencies necessary for further educational and

professional development. Below is a detailed presentation of the achievement of competencies and educational goals for each of the subjects.

Mathematik

1. **Basic math skills:**
   - **Objective:** Students will develop fundamental skills in basic mathematical operations.
   - **Methods:** Interactive exercises, digital tools, and manipulative materials.
   - **Expected outcomes:** Students will be able to accurately perform basic mathematical operations and use them in everyday situations.
2. **Advanced math concepts:**
   - **Objective:** To develop an understanding of geometry, algebra, and statistics.
   - **Methods:** Concept visualization, simulations, and practical examples.
   - **Expected outcomes:** Students will be able to apply advanced mathematical concepts in a variety of contexts.

The aim of teaching mathematics is to develop logical thinking, analytical abilities and precision in solving mathematical problems. Students will deal with the basics of arithmetic, geometry, algebra and statistics, as well as the application of mathematical concepts in real situations. Special emphasis is placed on developing the ability to think critically and solve problems, and on the application of mathematical knowledge in everyday life, including financial literacy. Also, students will learn how to interpret data, use statistical methods to draw conclusions and develop abilities for mathematical modeling of real situations. Classes will also include work on projects that connect mathematical concepts to real problems, encouraging students to develop creative approaches to problem solving. The subject Mathematik (Mathematics) from grades 5 to 9 is adapted according to the IBMYP curriculum, which includes an interdisciplinary approach, a focus on investigative learning, and the development of critical thinking through mathematical concepts.

Deutsch (German language)

1. **Language skills:**
   - **Objective:** To improve reading, writing, listening and speaking skills.
   - **Methods:** Reading literature, writing essays, debates, and lectures.
   - **Expected outcomes:** Students will be able to communicate clearly and effectively in German.
2. **Literary analysis:**
   - **Objective:** To develop the ability to analyze and interpret literary works.
   - **Methods:** Discussions, analytical essays, and critical reading.
   - **Expected outcomes:** Students will be able to interpret and analyze literary works from different perspectives.

The aim of German language classes is to develop language skills, creative expression and critical reading. Students will study grammatical structures, stylistics, literary genres and analysis of literary works. Special emphasis is placed on developing the ability to write, interpret texts and understand the cultural context of literary works. Students will also analyze contemporary media, developing abilities for critical thinking and media literacy. Also, students will be encouraged to participate in discussions, debate and argue their positions, which will develop communication skills.

English

1. **Communication skills:**

- **Objective:** To increase verbal and written communication skills in English.
- **Methods:** Interactive activities, essay writing, and presentations.
- **Expected outcomes:** Students will be able to communicate fluently in English.

2. **Cultural Awareness:**
   - **Goal:** Increase understanding of Anglophone culture through literature and media.
   - **Methods:** Analysis of films, books, and articles.
   - **Expected outcomes:** Students will develop a deeper understanding of the culture and social norms of the English-speaking world.

The goal of teaching English is to develop communicative skills in English. Students will learn the basics of grammar, vocabulary, pronunciation and culture of English-speaking countries. Special emphasis is placed on developing listening, speaking, reading and writing skills in English, as well as understanding cultural differences and similarities. Students will also analyze literary texts, films and media in English, which will develop critical thinking and cultural literacy. Also, classes will include projects and group activities that encourage cooperation and teamwork.

Bosnisch (Bosnian language)

1. **Language Literacy:**
   - **Goal:** To develop reading, writing, and speaking skills in the Bosnian language.
   - **Methods:** Reading of literary works, composition writing, and discussions.
   - **Expected outcomes:** Students will be able to effectively communicate and express themselves in the Bosnian language.
2. **Cultural and historical awareness:**
   - **Goal:** To increase knowledge about Bosnian culture and history.
   - **Methods:** Analysis of historical texts, cultural events and projects.
   - **Expected outcomes:** Students will develop a deeper understanding of Bosnian culture and historical context.

The aim of Bosnian language teaching is to develop language skills, creative expression and critical reading in Bosnian. Students will study grammatical structures, stylistics, literary genres and analysis of literary works from Bosnian literature. Special emphasis is placed on the development of the ability to write, interpret texts and understand the cultural context of Bosnian literary works. Students will also analyze contemporary media in the Bosnian language, developing abilities for critical reflection and media literacy. Also, students will be encouraged to participate in discussions, debate and argue their positions, which will develop communication skills.

Biologie

1. **Basic biological concepts:**
   - **Objective:** To understand the basic principles of biology, including the structure and function of living organisms.
   - **Methods:** Laboratory exercises, experiments, and field research .
   - **Expected outcomes:** Students will be able to explain basic biological concepts and apply them in different situations.
2. **Environmental awareness:**
   - **Objective:** To develop an understanding of ecology and environmental conservation .
   - **Methods:** Conservation projects , field research , and case studies.
   - **Expected outcomes:** Students will be able to analyze environmental problems and propose sustainable solutions.

HALLO WIR SIND IDSS

The goal of teaching biology is to develop an understanding of living organisms and their ecosystems. Students will study cell structure and function, genetics, evolution, anatomy, and ecology. Special emphasis is placed on the development of research skills, the ability to think critically and the understanding of scientific methods. Students will deal with issues of biodiversity conservation, environmental problems and sustainable development. Classes will include laboratory exercises, field research projects, and analysis of real biological data, which will develop students' practical skills and abilities for scientific research. Also, students will study the impact of human activities on nature and develop strategies to preserve natural resources.

Physik

1. **Basic physical principles:**
   - **Objective:** To understand the basic principles of physics, including kinematics , dynamics, and thermodynamics.
   - **Methods:** Experiments, simulations, and practical exercises.
   - **Expected outcomes:** Students will be able to apply physical principles in real situations.
2. **Technological application:**
   - **Objective:** To increase the understanding of the application of physics in technology.
   - **Methods:** Projects, laboratory work, and analysis of technological devices.
   - **Expected outcomes:** Students will be able to connect physical concepts with technological innovations.

The goal of teaching physics is to develop an understanding of the basic laws of nature, including motion, energy, waves, and electromagnetism. Students will engage in experiments that demonstrate physical principles and develop abilities for mathematical modeling of physical phenomena. Special emphasis is placed on the development of critical thinking, problem solving and the application of physical knowledge in everyday situations. Students will also deal with modern technologies and their physical foundations, such as photonics, quantum physics and nanotechnology. Also, classes will include projects and research papers that encourage students to apply scientific knowledge in innovative solutions to real-world problems.

Chemie

1. **Basic chemical concepts:**
   - **Objective:** Understand the basic principles of chemistry, including atomic structure, chemical reactions, and the periodic table.
   - **Methods:** Laboratory exercises, experiments, and analyses.
   - **Expected outcomes:** Students will be able to explain basic chemical concepts and apply them in different situations.
2. **Practical application:**
   - **Objective:** To develop the skills of applying chemical knowledge in everyday life.
   - **Methods:** Experiments, case studies, and projects.
   - **Expected outcomes:** Students will be able to use chemical principles to solve practical problems.

The goal of teaching chemistry is to develop an understanding of chemical processes and reactions that occur in nature and in everyday life. Students will study basic chemical elements and compounds, the laws of chemistry, and the ways in which chemistry is applied in industry, medicine, and technology. Special emphasis is placed on experimental

HALLO WIR SIND IDSS

work, development of laboratory skills and safety when working with chemicals. Students will also study the impact of chemical substances on the environment and health, developing a responsible approach to chemical materials. Also, classes will include research projects and laboratory exercises that encourage students to develop practical skills and abilities for scientific research.

Erdkunde (Geography)

1. **Geographic concepts:**
   - **Objective:** Understand basic geographic concepts, such as cartography, climate zones, and ecosystems.
   - **Methods:** Using maps, GIS technology, and field work.
   - **Expected outcomes:** Students will be able to analyze geographic data and apply it in real situations.
2. **Global Awareness:**
   - **Goal:** Increase understanding of global issues and their impacts.
   - **Methods:** Case studies, analyses, and projects.
   - **Expected outcomes:** Students will develop awareness of global problems and propose sustainable solutions.

The aim of teaching geography is to develop an understanding of the physical and social aspects of the Earth. Students will study geographic features, climate change, demographics, and economic activity. Special emphasis is placed on developing skills for interpretation of cartographic data, analysis of geographic information and understanding of global challenges such as climate change and sustainable development. Students will also study regional geographic features, developing the ability to analyze local and global geographic issues. Also, classes will include field research projects and analysis of real geographic data, which will help students develop practical skills and abilities for scientific research.

Geschichte (History)

1. **Historical events and periods:**
   - **Objective:** To understand key historical events and periods.
   - **Methods:** Analysis of primary and secondary sources, historical simulations, and projects.
   - **Expected outcomes:** Students will be able to critically consider historical events and understand their long-term consequences.
2. **Historical analysis:**
   - **Objective:** To develop the ability to analyze historical sources and interpret historical events.
   - **Methods:** Critical reading, discussions, and writing research papers.
   - **Expected outcomes:** Students will be able to approach historical questions analytically.

The aim of teaching history is to develop an understanding of past events, cultures and civilizations that have shaped the modern world. Students will study key periods of history, the causes and consequences of important events, and the development of human societies through the ages. Special emphasis is placed on critical analysis of sources, development of argumentation skills and understanding of historical perspectives. Students will also study the history of everyday life, culture and art, thus developing a comprehensive understanding of historical processes. Also, classes will include research papers and projects that encourage students to actively research historical topics and develop critical thinking.

Französisch (French language)

1. **Language skills:**
   - **Objective:** To improve reading, writing, speaking and listening skills in French.
   - **Methods:** Interactive activities, essay writing, and conversation exercises.
   - **Expected outcomes:** Students will be able to communicate fluently in French.
2. **Cultural Awareness:**
   - **Goal:** Increase understanding of French culture through literature and media.
   - **Methods:** Analysis of films, books, and articles.
   - **Expected outcomes:** Students will develop a deeper understanding of French-speaking culture and social norms.

The goal of French language classes is to develop communicative skills in French. Students will learn the basics of grammar, vocabulary, pronunciation and culture of French-speaking countries. Special emphasis is placed on developing listening, speaking, reading and writing skills in French, as well as understanding cultural differences and similarities. Students will also analyze literary texts, films and media in the French language, which will develop critical thinking and cultural literacy. Also, classes will include projects and group activities that encourage cooperation and teamwork.

Sachkunde (Nature and Society)

1. **Cross-curricular skills:**
   - **Objective:** To develop basic skills in different subjects through an integrative approach.
   - **Methods:** Projects, research , and interactive workshops.
   - **Expected outcomes:** Students will be able to connect knowledge from different subjects and apply it in complex situations.
2. **Practical application:**
   - **Goal:** To increase the ability to apply knowledge in everyday life.
   - **Methods:** Real projects, simulations, and field research .
   - **Expected outcomes:** Students will be able to use the acquired knowledge to solve practical problems.

The goal of teaching nature and society is to develop an understanding of natural phenomena and social structures. Students will study basic concepts in natural sciences, geography, history and social sciences. Special emphasis is placed on the development of research skills, the ability to think critically and the application of scientific methods. Students will also deal with issues of sustainable development, environmental protection and social responsibility. Classes will include projects and research papers that connect different scientific disciplines and encourage students to develop a holistic approach to learning.

Lebenskunde (Life Skills)

1. **Basic life skills:**
   - **Goal:** To develop basic skills needed for everyday life, such as time management, organization, and independence.
   - **Methods:** Workshops, practical activities, and projects.
   - **Expected outcomes:** Students will be able to effectively manage their time and resources and develop independence.
2. **Social Skills:**
   - **Goal:** To increase the ability of communication, teamwork and conflict resolution.
   - **Methods:** Group work, simulations, and discussions.

HALLO WIR SIND IDSS

- **Expected outcomes:** Students will be able to communicate effectively, cooperate with others and resolve conflicts.

The goal of life skills classes is to develop practical skills that are needed for everyday life and a future career. Students will learn the basics of financial literacy, housekeeping, health and nutrition, as well as communication and teamwork skills. Special emphasis is placed on the development of the ability to make independent decisions, plan and organize time. Students will also deal with issues of emotional intelligence, conflict resolution and building positive interpersonal relationships. Also, classes will include practical workshops and projects that encourage students to develop practical skills and apply them in everyday life.

Meine Umwelt (My Environment)

1. **Environmental awareness:**
   - **Objective:** To develop awareness of the importance of environmental protection and sustainable development.
   - **Methods:** Ecological projects, field research , and case studies.
   - **Expected outcomes:** Students will be able to recognize environmental problems and propose sustainable solutions.
2. **Social responsibility:**
   - **Goal:** To increase awareness of social responsibility and active citizenship.
   - **Methods:** Volunteer work, social responsibility projects, and discussions.
   - **Expected outcomes:** Students will develop a sense of social responsibility and actively participate in the community.

The aim of teaching my environment is to develop an understanding of environmental issues and responsible behavior towards nature. Students will study the basic concepts of ecology, conservation of natural resources and sustainable development. Special emphasis is placed on the development of environmental awareness, the ability to analyze environmental problems and the application of sustainable practices in everyday life. Students will also deal with issues of global environmental challenges, such as climate change, pollution and biodiversity conservation. Also, classes will include field research projects and analysis of real environmental data, which will help students develop practical skills and abilities for scientific research.

Informatics (Informatics)

1. **Basic IT skills:**
   - **Objective:** Master the basic skills of using computers and software applications.
   - **Methods:** Practical exercises, projects, and use of digital tools.
   - **Expected outcomes:** Students will be able to effectively use computers and software applications for a variety of tasks.
2. **Programming:**
   - **Objective:** To develop basic programming skills.
   - **Methods:** Learning programming languages, application development, and projects.
   - **Expected outcomes:** Students will be able to write basic programs and understand programming logic.

The aim of teaching informatics is to develop basic IT skills and understanding of digital technologies. Students will learn the basics of programming, using software tools, the Internet, and online safety. Special emphasis is placed on the development of algorithmic thinking, problem solving and the application of digital skills in everyday life and learning. Students will also study modern technologies, such as artificial intelligence, robotics and

network technologies. Also, classes will include projects and research papers that encourage students to develop creative approaches to solving digital problems and innovative digital products.

Technische Erziehung (Technical Education)

1. **Technical skills:**
   - **Objective:** To develop basic technical skills, including working with tools and materials.
   - **Methods:** Practical workshops, projects, and simulations.
   - **Expected outcomes:** Students will be able to use tools and materials to create technical projects.
2. **Innovation and Design:**
   - **Goal:** Encourage creativity and innovation through technical projects.
   - **Methods:** Design projects, prototyping , and group work.
   - **Expected outcomes:** Students will be able to develop creative solutions to technical problems.

The goal of technical education classes is to develop practical skills and understanding of technical principles. Students will deal with the basics of mechanics, electronics, informatics and technological processes. Special emphasis is placed on developing the ability to apply technical knowledge in practical situations, solving technical problems and developing innovative solutions. Students will be engaged in designing and making technical products, developing creativity and technical skills. Also, classes will include laboratory exercises, hands-on workshops and projects that encourage students to develop practical skills and abilities for technical research.

Grundtechniken (Basic techniques)

1. **Basic practical skills:**
   - **Objective:** To develop basic practical skills needed for everyday life.
   - **Methods:** Practical activities, workshops, and projects.
   - **Expected outcomes:** Students will be able to use basic techniques to solve everyday tasks.
2. **Application of techniques:**
   - **Objective:** To increase the ability to apply basic techniques in different contexts.
   - **Methods:** Projects, simulations, and practical exercises.

Expected outcomes: Students will be able to use basic techniques to solve practical problems.

The aim of teaching basic techniques is to develop practical skills that are necessary for everyday life and work. Students will deal with the basics of manual work, the use of tools, material processing techniques and basic technical principles. Special emphasis is placed on the development of the ability for precision, attention and responsible behavior when working with tools. Students will be engaged in designing and making simple technical products, developing creativity and technical skills. Also, classes will include practical workshops and projects that encourage students to develop practical skills and apply them in everyday life.

Gesellschaftslehre (Social Sciences)

1. **Social structures:**
   - **Objective:** To develop an understanding of social structures and their functions.

- **Methods:** Case studies, simulations, and group discussions.
- **Expected outcomes:** Students will be able to analyze social structures and their effects on individuals and communities.

2. **Civic awareness:**
   - **Goal:** To increase awareness of civil rights and responsibilities.
   - **Methods:** Social responsibility projects, discussions, and volunteering.
   - **Expected outcomes:** Students will develop an awareness of civil rights and responsibilities and actively participate in the community.

The aim of teaching social studies is to develop an understanding of social structures, institutions and processes. Students will study the basics of sociology, psychology, economics and political science. Special emphasis is placed on the development of the ability to analyze social problems, critical thinking and understanding the role of the individual in society. Students will also deal with issues of social justice, human rights and democracy, developing a responsible approach to social issues. Also, classes will include research papers and projects that encourage students to actively explore social issues and develop critical thinking.

Ethics

1. **Moral development:**
   - **Goal:** To develop moral values and ethical principles.
   - **Methods:** Discussions, case studies, and analyzes of ethical dilemmas.
   - **Expected outcomes:** Students will be able to consider ethical dilemmas and make informed decisions.
2. **Application of ethics:**
   - **Goal:** To increase the ability to apply ethical principles in everyday situations.
   - **Methods:** Projects, simulations, and practical exercises.
   - **Expected outcomes:** Students will be able to use ethical principles to solve practical problems.

The goal of teaching ethics is to develop moral thinking, evaluation and social responsibility. Students will study ethical theories, moral dilemmas, and values such as honesty, fairness, and empathy. Special emphasis is placed on the development of the ability to think critically and argue about ethical issues, as well as on the application of ethical principles in everyday life. Students will also deal with issues of social responsibility, human rights and ethical challenges of contemporary society. Also, classes will include discussions, debates and projects that encourage students to develop moral reflection and responsible behavior .

Kunst (Art)

1. **Artistic Skills:**
   - **Objective:** To develop basic artistic skills, including drawing, painting, and sculpture.
   - **Methods:** Practical exercises, projects, and workshops.
   - **Expected outcomes:** Students will be able to use basic art techniques to express creativity.
2. **Cultural Awareness:**
   - **Goal:** To increase understanding of different artistic styles and cultures.
   - **Methods:** Analysis of works of art, museum visits, and international exchanges.
   - **Expected outcomes:** Students will develop a deeper understanding of artistic styles and cultures.

HALLO WIR SIND IDSS

The goal of art education is to develop creative abilities and visual expression. Students will engage in various drawing, painting, sculpture and digital art techniques. Special emphasis is placed on the development of aesthetic sense, ability for visual analysis and understanding of artistic styles throughout history. Students will also study contemporary artistic practices, developing creative approaches to visual expression. Also, classes will include hands-on workshops, projects and exhibitions that encourage students to develop creativity and express their artistic ideas.

Sport (Physical and health culture)

1. **Physical activity:**
   - **Goal:** To increase physical fitness and skills through various sports activities.
   - **Methods:** Training, sports games, and fitness programs.
   - **Expected outcomes:** Students will be able to maintain physical fitness and develop sports skills.
2. **Teamwork and fair play:**
   - **Goal:** To develop teamwork and fair skills play .
   - **Methods:** Group sports, team-building activities, and tournaments.
   - **Expected outcomes:** Students will be able to work effectively in a team and respect fair principles playa .

The goal of physical education classes is to develop physical abilities, healthy lifestyle habits and team spirit. Students will engage in various sports activities, exercises to develop fitness and coordination. Special emphasis is placed on the development of sportsmanship, fair play and the importance of physical activity for health. Students will also be involved in different sports disciplines, such as athletics, gymnastics, team sports and recreational activities. Also, classes will include sports competitions, projects and workshops that encourage students to develop sports skills and a healthy lifestyle.

Music (Music culture)

1. **Music skills:**
   - **Objective:** To develop basic musical skills, including playing instruments and singing.
   - **Methods:** Practical exercises, rehearsals, and concerts.

The aim of teaching music culture is to develop musical skills, creativity and understanding of music theory. Students will perform, compose and analyze different musical genres. Special emphasis is placed on the development of hearing, rhythm, melody and harmony, as well as understanding the cultural significance of music.

Preparation for future education and career

Teaching at our school provides the foundational skills needed for post-secondary education and professional challenges, including developing problem-solving, decision-making and preparation for a variety of career paths.

Problem solving skills

Learning strategies for identifying, analyzing and solving problems in different contexts. Students will be introduced to techniques for systematic thinking and creative approach to problems.

HALLO WIR SIND IDSS

Making decisions
Developing the ability to make informed decisions based on the analysis and understanding of information. This includes analyzing options and evaluating the consequences of decisions.

Basic principles of teaching

Integrative teaching
Teaching is organized to combine different subjects and methods to create a coherent educational experience. Integrative teaching allows students to connect different areas of knowledge and better understand how concepts from one subject apply to another. For example, connecting math with science through experimental projects allows students to see the practical application of math concepts in scientific research . Also, connecting literature and history can help students better understand the cultural and historical context of literary works. Integrative teaching promotes critical thinking and the ability to solve problems by combining different perspectives and approaches.

Individualization and differentiation
Classes are adapted to the different needs and abilities of students. A variety of methods and materials are used to enable each student to reach their full potential. Individualization refers to the adaptation of teaching methods and content to each individual student, while differentiation implies the adaptation of teaching to groups of students with similar abilities or interests. This approach allows for a personalized experience that is tailored to the specific needs of each student.

Adapting teaching
Developing individual plans for students who have specific needs or learning difficulties . These plans include additional resources, personalized activities and learning support, which may include individual tutoring, learning assistants, learning support technology or supplementary materials. For example, students with dyslexia can receive materials in audio format or use specialized applications to support reading. Also, adaptation may include changes in the way of assessment to allow students to demonstrate their knowledge in a way that is most appropriate for them.

Quality learning
Focus on active learning and student participation through the use of various methods and materials, including hands-on activities, group projects and research assignments. Active learning allows students to engage in the process of education and apply knowledge in real situations. For example, instead of just passively listening to a lecture, students can participate in discussions, workshops, simulations and experiments. Group projects allow students to develop team and communication skills, while research assignments encourage scientific curiosity and critical thinking. Quality learning also involves using different sources of information, such as books, articles, internet resources and multimedia content, to enrich the teaching process and allow students to explore topics from different perspectives.

Additional components of individualization and differentiation:

Formative assessment

- **Continuous Feedback:** Teachers regularly assess student progress through various methods such as quizzes, essays, presentations and projects. Feedback helps students understand their strengths and areas for improvement.
- **Self-Assessment:** Students are involved in a self-assessment process to reflect on their learning and set goals for further progress.

Various teaching strategies

- **Multisensory activities:** Using activities that engage different sensory channels (visual, auditory, kinesthetic) to facilitate learning .
- **Technology in the classroom:** Integrating technology such as educational apps, interactive whiteboards, and computers to adapt instruction to different learning styles.

Socio -emotional learning

- **Developing Empathy:** Including activities that help students develop empathy and understanding for different perspectives and experiences.
- **Mental Health Support:** Providing resources and support for students' mental health, including counseling and stress reduction programs.

These principles ensure that teaching is comprehensive, inclusive and tailored to the diverse needs of students, enabling them to develop their abilities and reach their full potential. If you have additional requests or questions, feel free to contact me!

Explanation of educational framework and work methodology

Educational framework

Standards and goals

The curriculum is carefully aligned with the educational standards established for the regions of Baden-Württemberg and Thuringia . These standards include legal regulations and recommendations that clearly define the content and objectives of teaching for primary and secondary schools (Gymnasium). Implementation of these standards ensures consistency and quality of education, enabling students to develop key competencies and achieve academic success.

The standards include:

- **Bildungsgesetz:** Legal regulations that prescribe educational goals and standards for different educational levels and stages. This legislation ensures that the education system meets the minimum requirements and objectives needed to provide quality education. It also defines the rights and obligations of students, teachers and parents, and establishes criteria for assessment and evaluation .
- **Curriculum:** Recommendations that define the curriculum and specific teaching objectives for each educational phase. These recommendations are aligned with the educational norms of the German education system and ensure that the curricula cover all necessary aspects of education and develop key competencies in students. The curriculum focuses on the development of basic skills such as literacy, numeracy, critical thinking, and social and emotional skills.

Access to classes
Teaching is organized in such a way that it fully follows the goals and standards of the educational system, providing students with an education that is in line with the latest educational practices and methods. The teaching approach is designed to accommodate different learning styles and individual student needs, ensuring an inclusive and well-rounded education.

Access to classes includes:

- **Continuous improvement:** Teaching and curriculum are regularly updated in accordance with the latest research and educational trends. This approach ensures that teaching remains relevant and effective, and that students receive an education that meets contemporary needs and challenges. For example, introducing new technologies and digital tools into the classroom allows students to develop the digital skills that are essential for success in the 21st century.
- **Holistic approach:** Teaching focuses on the whole development of the student, including academic, social, emotional and physical development. This approach promotes students' health and well-being, and prepares them for life's challenges and professional success.

Work methodology

Active learning
Learning is achieved through the active participation of students in class. This approach includes various forms of interactive learning, such as discussions, project work and research activities. Active learning allows students to take responsibility for their own education and engage in the learning process in a way that is meaningful and relevant to them.

Examples of active learning include:

- **Discussions:** Students participate in discussions that encourage critical thinking and exchange of ideas. Discussions can be teacher- or student-led, and include different perspectives and arguments.
- **Project work:** Students work on group or individual projects that allow them to research topics that interest them and apply the knowledge gained in practical situations. Project work develops skills such as teamwork, planning, organization and presentation.
- **Research activities:** Students engage in research activities that allow them to develop research skills and learn how to use different sources of information. For example, organizing workshop sessions to develop research skills allows students to explore topics in a deeper and more creative way, thus encouraging their active participation and engagement in the learning process.

Interactive approach
The use of technology and digital resources plays a key role in improving teaching. This method involves the use of technical aids, educational applications and online resources to make teaching more dynamic and accessible. By using these technologies, teachers can engage students in innovative ways, thereby increasing their motivation and interest in learning.

Examples of an interactive approach include:

- **Technical aids:** Using interactive whiteboards, computers, tablets and other technical aids to improve teaching. These aids allow students to visualize concepts, access digital resources, and participate in interactive activities.
- **Educational applications:** The use of educational applications that enable personalized learning and adaptation of teaching to the individual needs of students. These applications may include games, quizzes, simulations, and other interactive content that encourages students to learn.
- **Online Resources:** Using online resources such as video lessons, e-books, articles, and forums to enrich instruction and allow students to explore topics outside the classroom. Online resources allow students to learn at their own pace and access information at any time.

Evaluation and monitoring

Regular monitoring of student progress is critical to effective education. This includes different forms of evaluation , such as tests, projects and portfolios . Feedback collected during evaluations is used to adjust teaching and improve the educational process. This approach enables continuous improvement of learning and teaching , helping students to achieve their educational goals and develop their potential.

Examples of evaluation and monitoring include:

- **Tests:** Regular administration of tests that assess students' knowledge and skills in various subjects. Tests can be standardized or adapted to the specific needs of students.
- **Projects:** Evaluation of projects that students do individually or in groups. Projects allow students to apply acquired knowledge in practical situations and develop skills such as research , critical thinking and presentation.
- **Portfolios:** Using portfolios to track student progress over time. Portfolios contain student work, reflections, grades and feedback, and provide a comprehensive overview of their progress and development.

These educational frameworks and working methodology ensure that teaching is comprehensive, inclusive and adapted to the diverse needs of students, enabling them to develop their abilities and reach their full potential. If you have additional requests or questions, feel free to contact me!

1.3. General goals of education

Developing basic educational competencies and skills of students

Our goal is the comprehensive development of students' basic competencies and skills that are crucial for their academic and personal improvement. These goals include the development of cognitive, analytical, synthetic and practical skills, as well as technical literacy. Each of these aspects is crucial for preparing students to successfully face various challenges in education and in everyday life.

Cognitive competences

Cognitive competences represent the foundation for further intellectual and academic development of students. We focus on:

- **Basic Academic Skills:** Learning basic skills such as reading, writing, and solving math problems. Reading allows students to access knowledge from a variety of sources,

develop critical thinking, and expand their vocabulary. Writing helps them express their thoughts, ideas and feelings in a clear and coherent way. Solving mathematical problems develops logical thinking, the ability to recognize patterns and the application of mathematical concepts in everyday life. These skills are the foundation for further intellectual development and successful acquisition of more advanced academic content.

- **Developing information analysis and synthesis skills:** Students learn how to analyze data and information from a variety of sources. Analysis involves the ability to separate information into smaller parts, understand their interrelationships, and use them to draw conclusions and solve problems. Synthesis of information implies combining different sources and elements of knowledge into a coherent whole. This helps students to form a comprehensive understanding of topics and issues, which is crucial for making informed decisions and solving complex situations.

Analytical skills

Developing analytical skills includes:

- **Ability to analyze and interpret information:** Students learn how to critically approach information that comes from different sources. Critical thinking implies the ability to recognize key information, distinguish relevant from irrelevant data and correctly interpret the results. Students develop the ability to evaluate different aspects of a problem, recognize cause-and-effect relationships, and make informed decisions. Critical thinking enables students to question their views, arguments and conclusions, and to be open to new ideas and perspectives.

Synthetic skills

Synthetic skills refer to:

- **Integration of different information:** Students learn how to combine different information and apply it in new contexts. This skill encourages creative thinking and innovative approaches to problems. Students develop the ability to connect different sources of knowledge, recognize patterns and generate new ideas and solutions using existing knowledge. Integrating information helps students form a holistic understanding of topics, which is critical to solving complex problems and making informed decisions.

Practical skills

Developing practical skills includes:

- **Using different tools and techniques to solve problems:** Students are taught how to apply their knowledge in practical situations. This involves using different tools, techniques and methods to solve real problems. Practical skills help students develop the ability to apply theoretical knowledge in practice, which is crucial for successfully dealing with everyday challenges and situations. Students develop the ability to adapt to different situations, creative problem solving and making practical decisions.

Technical literacy

Technical literacy includes:

- **Use of technology and various tools:** Students are trained to use technology, software and digital tools to achieve educational goals. This includes working with a variety of digital resources, such as computers, applications and online tools, to help research , analyze and present information. Developing technical literacy is crucial

for successful functioning in modern society and the labor market. Students develop the ability to use technology to solve problems, communicate and collaborate, which is essential to successfully face the challenges of modern society.

This approach ensures that our students develop all the necessary skills and competencies to be successful in their future education and professional careers. Our goal is for students to become independent, critically thinking and informed individuals who are ready to face all the challenges that life brings them. If you have additional requests or questions, feel free to contact us!

Improving language and communication skills

Language skills
Developing language skills is a key part of the educational process, especially when it comes to learning and improving the ability to read, write, speak and listen in German, as well as in other languages according to the curriculum. Through this segment of education, we want to ensure that students become competent in all aspects of language communication.

Grammar skills
Improving knowledge of grammar rules and their application in writing and speaking is essential. This includes a detailed understanding of the syntax, morphology, phonetics and semantics of the language. Through continuous learning and practice, students master the rules that allow them to create sentences that are syntactically correct and meaningfully precise. This is achieved through various activities such as grammar exercises, text analysis and practical applications in everyday speaking and writing. Understanding grammar rules helps students to communicate correctly and effectively, which contributes to better expression and interpretation of information.

Vocabulary
Developing a rich vocabulary is key to more expressive communication and better understanding of text. This is achieved through activities such as reading books, writing compositions, keeping a diary and using new words in everyday communication. A rich vocabulary allows students to express their thoughts and feelings more precisely. Through various tasks, students expand their vocabulary, which contributes to more effective and clearer communication of messages. Also , students learn how to correctly use synonyms, antonyms and homonyms, which contributes to the diversity and richness of their expression .

Communication skills
Effective communication in different contexts is the key to academic and personal success. This area includes the development of the ability to express thoughts, feelings and ideas in a clear and coherent manner.

Public appearances
Practicing presentation skills and public speaking through various activities and projects helps students gain confidence in expressing their ideas in front of an audience. This includes working on diction, intonation, manners and non-verbal communication. Students are encouraged to participate in various forms of public performance such as debates, recitations, presentations and public speeches. Through these activities, students develop

the ability to structure and present their ideas in a clear and convincing manner, which is crucial for their academic and professional development.

Writing texts
Developing skills in writing different types of texts, including essays, reports, creative works, business letters and technical documents. This process helps students improve their skills of expression through writing, which contributes to better communication and organization of their thoughts and ideas. Students learn how to properly structure text, use appropriate style and tone, and how to communicate their messages effectively. Through continuous writing and feedback, students develop the ability to think critically and reflect, which is critical to their intellectual development.

Encouraging creativity and critical thinking

Creativity
Encouraging creativity in students is of key importance for their overall development. Through various activities and projects, students develop the ability of original thinking and creative problem solving.

Artistic activities
Organizing art workshops and projects that allow students to develop their creative abilities. Activities such as painting, sculpture, music, drama and photography help students explore their artistic inclinations and express themselves in innovative ways. Through these activities, students develop the ability of visual and tactile expression , which contributes to their emotional and intellectual development. Art projects also encourage students to develop teamwork and cooperation, which is crucial for successful functioning in a social environment .

Innovative tasks
Using tasks that encourage original thinking and the development of innovative solutions. These tasks allow students to explore new ideas and approaches, thus contributing to their creative thinking and ability to find innovative solutions to different challenges. Students are encouraged to develop their ideas through various forms of research and project tasks, which contributes to their critical thinking and ability to analyze and synthesize information.

Critical thinking
Developing critical thinking enables students to effectively analyze, evaluate and interpret information. This includes:
Argumentation
Practicing the skills of formulation and presentation of arguments based on research and analysis. Students learn how to formulate and present their views with the help of valid arguments, which helps them to better understand and express their opinions. Argumentation is key to making informed decisions and developing logical thinking skills. Students are encouraged to participate in debates, discussions and argumentative debates, which contributes to their intellectual development and critical thinking skills.

HALLO WIR SIND IDSS

Social and emotional development of students

Social skills
Developing social skills helps students to function effectively in a social environment . This includes:

Cooperation
Organizing group activities that encourage teamwork and joint problem solving. These activities help students learn how to work effectively in a team, communicate with their peers, and solve problems together. Students develop the ability to listen, negotiate and make joint decisions, which is crucial for successful functioning in group situations. Teamwork also encourages students to develop empathy and social awareness, which contributes to better interpersonal relationships.

Conflict resolution
Learning techniques for constructive conflict resolution and building positive relationships. Students learn how to identify causes of conflict, use constructive strategies to resolve disagreements, and develop positive interpersonal relationships. This process contributes to better interpersonal understanding and reduction of conflicts in the school environment . Through various workshops and simulations, students develop the ability to resolve conflicts in a peaceful and constructive manner, which is crucial for successful functioning in society.

Emotional intelligence
Supporting students in understanding and managing their own emotions is crucial for their emotional development. This includes:

Managing emotions
Developing skills to recognize and manage personal emotions. Students learn how to recognize their emotions, how to control them and how to deal with stress and challenges. This helps students better cope with emotional difficulties and develop a healthy relationship with their own feelings. Through various activities such as an emotion diary, guided meditations and psychological workshops, students develop the ability of self-reflection and emotional regulation.

Empathy
Fostering understanding and compassion for others. Through various educational activities and projects, students develop the ability to put themselves in the position of others, which contributes to the development of social awareness and interpersonal skills. Empathy helps students build positive relationships with their peers and community members. Students are encouraged to participate in volunteer activities, humanitarian projects and community service, which contributes to their social and emotional development.

The teaching framework at the Internationale Deutsche Schule Sarajevo provides comprehensiveness for planning and conducting lessons in accordance with educational standards. Through clearly defined educational goals, basic teaching principles, educational framework and work methodology, this part of the annual teaching plan and program ensures that the educational process is efficient, relevant and aligned with international norms. In this way, it enables students to achieve high educational results and be ready for the future challenges that life will bring them.

2. Structure of the school program

2.1. Subject lesson plans

Objectives

Definition of goals by area

Mathematik

The goals of mathematics instruction include developing students' ability to understand and apply basic mathematical operations such as addition, subtraction, multiplication , and division. The goal is for students not only to learn mathematical operations, but also to be able to apply them in different contexts, both in the school environment and in everyday life. For example:

- **First grade:** Students will learn basic numbers up to 20, number recognition, simple addition and subtraction operations using visual aids and manipulatives. They will also learn basic geometric shapes such as circle, square and triangle, and simple measurement concepts such as length and mass.
- **Second grade:** Knowledge is extended to numbers up to 100, students will learn the multiplication and division table up to 10, and basic measurement concepts such as length, mass and volume. Problem solving skills are developed through simple tasks and games.
- **Third Grade:** Focus will be on more complex operations with multi-digit numbers, including addition and subtraction with carry. Students will introduce basic fraction concepts, solve simple equations, and work with symmetry and basic geometric bodies.
- **Fourth grade:** Students will learn about decimal numbers, more complex fractions, and geometric figures such as pyramids and prisms. It will also cover the basics of statistics, including collecting and analyzing data through graphs and tables.
- **Fifth grade:** Students will engage in algebra, work on simple equations and inequalities , and study proportionality and percentage calculations. They will also learn about the area and volume of geometric bodies, and apply mathematical concepts in practical situations.
- **Sixth grade:** Focus is on more complex topics such as algebra, geometry (including area and volume of complex solids), and an introduction to trigonometry and statistics. Students will work to solve complex mathematical problems and develop logical thinking skills.
- **Seventh Grade:** Students will tackle more advanced topics in algebra, including quadratic equations and factoring . In geometry, they will study circles, theorems about parallelism and symmetries, and work with trigonometric functions.
- **Eighth grade:** Focus is on more advanced topics such as functions, graphs of functions, and more complex equations and inequalities . Students will also learn about vectors, coordinate geometry, and the basics of analytic geometry.
- **Ninth Grade:** Students will deal with more complex math concepts such as derivatives, integrals, and advanced topics in trigonometry and statistics. They will develop analytical thinking skills through solving complex problems and working on mathematical projects.

The subject Mathematik (Mathematics) from grades 5 to 9 is adapted according to the IBMYP curriculum, which includes an interdisciplinary approach, a focus on investigative learning, and the development of critical thinking through mathematical concepts.

Deutsch (German language)

The goals of German language classes are to develop reading, writing, speaking and listening skills. The goal is for students to become competent language users, capable of analyzing and interpreting different texts, as well as expressing their thoughts and ideas in a clear and coherent manner. For example:

- **First grade:** The focus is on recognizing letters, learning basic words, simple sentences and correct pronunciation. Students will learn through songs, stories and games that encourage the development of language skills.
- **Second Grade:** Students expand their vocabulary, learn simple grammar structures, and begin writing short essays. They will work on developing listening skills through simple dialogues and stories.
- **Third grade:** The focus will be on reading and understanding short texts, learning more complex grammar rules and writing longer compositions. Students will analyze basic literary texts and work on critical thinking skills.
- **Fourth grade:** Students will write essays and analyze literary texts, expand vocabulary and work on developing critical thinking through analysis of what they read. They will also learn about different stylistic figures and rhetorical techniques.
- **Fifth grade:** Focus is on more complex texts, including analysis of poetry and prose, and developing argumentation and debating skills. Students will work on writing essays and develop skills of expression through different literary forms.
- **Sixth grade:** Students will engage in deeper analysis of literary works, essay writing and developing critical thinking and independent research skills . They will also learn about the history of German literature and important authors.
- **Seventh grade:** Focus is on more advanced topics such as analytical interpretation of literary texts, complex grammatical structures, and writing research papers. Students will work to develop writing skills across a variety of genres, including journalism and creative writing.
- **Eighth grade:** Students will study different literary periods and styles, and develop the ability to analyze and interpret complex texts. They will also work on improving argumentation skills through debating activities and writing critical essays.
- **Ninth grade:** Focus is on advanced topics such as comparative analysis of literary works, sociolinguistics and pragmatics. Students will work on research projects, writing scientific papers and developing critical thinking skills through analysis of contemporary social issues.

Naturwissenschaften (Natural Sciences)

The goals of teaching science include developing an understanding of basic scientific principles and methods through experiments and research . The goal is for students to become curious researchers , capable of applying scientific methods in everyday life. For example:

- **First grade:** Focus is on basic concepts such as plants and animals, simple experiments with water and air, and the basics of ecology. Students will learn through hands-on activities and research projects.
- **Second grade:** Students will learn about the basic physical properties of materials, simple chemical reactions, and the basics of astronomy. They will also work on projects related to the environment and environmental issues.
- **Third grade:** The focus will be on studying the life cycles of plants and animals, the basics of genetics, and simple physical experiments. Students will work on research projects and develop critical thinking skills.

- **Fourth grade:** Students will learn about more complex chemical reactions, the basics of physics (eg force and energy), and explore ecosystems and their components. They will work on practical experiments and develop teamwork skills.
- **Fifth grade:** The focus is on the study of the human body, the basics of molecular biology, and work on more complex experiments in the fields of physics and chemistry. Students will learn through laboratory exercises and research projects.
- **Sixth grade:** Students will do more complex experiments in chemistry and physics, learn about more advanced topics in biology (eg ecosystems, evolution) and develop critical thinking skills through science projects. They will also learn about the basics of ecology and environmental protection.
- **Seventh grade:** Focus is on advanced topics such as genetic modification, biotechnology, and advanced physics experiments. Students will work on research projects and develop skills in the analysis and synthesis of scientific data.
- **Eighth grade:** Students will explore more complex topics such as quantum physics, astrophysics, and advanced chemistry. They will work on experiments and research projects that involve analyzing complex scientific problems and developing critical thinking skills.
- **Ninth grade:** Focus is on advanced topics such as molecular biology, genetic engineering, and theoretical physics. Students will work on research projects, develop their laboratory skills and work on the presentation of their research .

Gesellschaftswissenschaften (Social Sciences)

The goals of social studies are to enable students to understand basic social structures, historical events and cultural phenomena. The goal is for students to become conscious members of society, capable of critical reflection on social issues and events. For example:

- **First grade:** Students learn about their community, the basics of social norms and values, and the development of social skills through group activities. They will work on projects related to their local community and learn through games and stories.
- **Second grade:** Focus is on the study of family, local community, and the basics of geography (eg continents, oceans). Students will work on projects related to geography and learn through hands-on activities.
- **Third grade:** Students will learn about basic historical events, different cultures and religions, and develop an understanding of global issues. They will work on research projects and learn through group discussions.
- **Fourth grade:** Students research historical events, study different cultures, and develop the ability to think critically about social issues through the analysis of various sources. He will work on projects related to history and culture.
- **Fifth grade:** Focus is on the study of political systems, economic structures, and global issues such as climate change and human rights. Students will work on research projects and learn through hands-on activities.
- **Sixth grade:** Students will work on more complex research projects that include analyzing historical sources, studying contemporary social issues, and developing critical thinking and argumentation skills. They will also learn about the basics of sociology and anthropology.
- **Seventh grade:** Focus is on advanced topics such as sociology, psychology, and anthropology. Students will work on research projects and develop skills in analyzing and synthesizing social data.
- **Eighth grade:** Students will tackle more complex topics such as political philosophy, economics, and globalization. They will work on research projects and develop critical thinking skills through the analysis of contemporary social issues.

- **Ninth Grade:** Focus is on advanced topics such as theoretical sociology, political economy, and cultural anthropology. Students will work on research projects, develop their analytical skills and work on the presentation of their research .

Work methods

Teaching methods include different approaches and techniques used to achieve educational goals. This includes:

- **Frontal teaching:** Lectures and teacher's explanations, use of multimedia tools and presentations.
- **Group work:** Work in small groups on projects, discussions and joint problem solving.
- **Individual work:** Independent study and research , essay writing and work on individual projects.
- **Experimental teaching:** Performing experiments, practical works and research activities.
- **Critical discussion:** Analysis and discussion of read texts, films and other media, and development of argumentation and critical thinking skills.

Evaluation criteria

Assessment criteria include different methods and approaches for assessing student knowledge and skills. This includes:

- **Written examinations:** Tests, tests and essays that assess the student's knowledge and understanding of the content.
- **Oral exams:** Oral examination of knowledge, presentations and discussions.
- **Practical works:** Carrying out experiments, working on projects and practical exercises.
- **Continuous assessment:** Monitoring student progress through assignments, homework and participation in teaching activities.
- **Self-assessment and peer assessment:** Students assess their work and the work of their peers, which contributes to the development of critical thinking and self-reflection.

This detailed structure of the school program enables a comprehensive approach to education, ensuring that students achieve high educational results and are ready for future challenges.

Detailed description of goals, content, work methods and evaluation criteria by subject

Mathematik

Objectives:

- Developing logical thinking and analytical skills through various mathematical problems and tasks.
- Understanding of basic mathematical concepts, such as numbers, operations, functions, and geometric shapes.
- Application of mathematical knowledge in everyday life, including financial literacy and solving practical problems.
- Improvement of problem solving and critical thinking skills through interactive and collaborative activities.

Content:

- Numbers and number operations: natural numbers, integers, rational numbers, decimal numbers, and real numbers.

HALLO WIR SIND IDSS

- Geometry and measurement: basic geometric shapes, surfaces, volumes, perimeters, and angle measurement.
- Algebra: linear equations, quadratic equations, polynomials, and functions.
- Statistics and Probability: Basic concepts in statistics, tables, graphs, mean, median, mode, and basic concepts of probability.

Working methods:

- Lectures and demonstrations using multimedia content and digital tools.
- Work on tasks and exercises through individual and group activities.
- Group work and discussions to solve more complex mathematical problems and projects.
- Using technology, such as calculators and geometry software, to enhance learning.

criteria:

- Written and oral exams: regular tests, control tasks, and final exams.
- Homework that involves solving problems and making projects.
- Class activity: participating in discussions, solving tasks on the board, and working in groups.
- Hands-on projects and presentations involving the application of mathematical concepts in real-world situations.

Deutsch (German language)

Objectives:

- Developing language skills: listening, speaking, reading and writing in German.
- Getting to know the culture and traditions of the German-speaking area through literature, films, and other cultural content.
- Developing communication skills for everyday use and academic purposes.
- Improving critical thinking through text analysis and discussion on various topics.

Content:

- Grammar: basic grammatical concepts, syntax, morphology, verb forms, and correct use of articles.
- Vocabulary and spelling: vocabulary expansion through thematic lessons and spelling exercises.
- Reading and analyzing texts: different types of texts, including literary, informational, and scientific texts.
- Composition and writing style: writing essays, letters, reports, and creative works.

Working methods:

- Interactive workshops that include role playing, debates, and discussions.
- Discussions and debates on various topics to improve speaking skills.
- Essay and composition writing with individual and group feedback.
- Using audiovisual materials, such as movies and songs, to improve listening skills.

criteria:

- Written and oral exams: grammar, vocabulary, and reading comprehension tests.
- Presentations and projects: individual and group projects on various topics.
- Class activity: participation in discussions, workshops, and group activities.
- Homework that includes reading, writing, and research .

English

Objectives:

- Improving communication skills in English through listening, speaking, reading and writing.

HALLO WIR SIND IDSS

- Developing critical thinking and analytical skills through the analysis of literary and informative texts.
- Getting to know the culture, history, and traditions of the English-speaking area.
- Preparation for international English language exams, such as IELTS and TOEFL.

Content:

- Grammar and syntax: basic and advanced grammar concepts, correct tenses, conditionals, and sentences.
- Vocabulary and spelling: vocabulary expansion through thematic lessons and spelling exercises.
- Reading and analysis of literary works: analysis of classic and contemporary literary works, poetry, and drama.
- Writing and composition: writing essays, reports, letters, and creative works.

Working methods:

- Lectures and discussions using interactive tools and digital resources.
- Work in pairs and groups to improve communication skills.
- Writing and presentations with individual and group feedback.
- Using multimedia content, such as movies, series, and songs, to improve listening skills.

criteria:

- Written and oral exams: grammar, vocabulary, and reading comprehension tests.
- Projects and presentations: individual and group projects on various topics.
- Class activity: participation in discussions, workshops, and group activities.
- Homework that includes reading, writing, and research .

Bosnisch (Bosnian language)

Objectives:

- Developing literacy and language skills through reading, writing, listening and speaking.
- Getting to know the rich literature and cultural heritage of Bosnia and Herzegovina.
- Developing critical thinking and analytical skills through the analysis of literary texts.
- Improving the ability to express thoughts and feelings in the mother tongue.

Content:

- Grammar and spelling: basic and advanced grammar concepts, correct tenses, punctuation, and spelling.
- Reading and analysis of literary works: analysis of classic and contemporary literary works, poetry, and drama.
- Writing compositions and essays: writing creative, argumentative , and informative compositions.
- Oral and written communication: developing oral and written expressiveness through various activities.

Working methods:

- Lectures and reading with the use of interactive tools and digital resources.
- Discussions and debates on various topics to improve speaking skills.
- Writing and analyzing texts with individual and group feedback.
- Using multimedia content, such as movies and songs, to improve listening skills.

criteria:

- Written and oral exams: grammar, vocabulary, and reading comprehension tests.
- Projects and research papers: individual and group projects on various topics.
- Class activity: participation in discussions, workshops, and group activities.
- Homework that includes reading, writing, and research .

HALLO WIR SIND IDSS

Biologie
Objectives:

- An understanding of basic principles of biology, including cell structure and function, genetics, ecology, and evolution.
- Developing analytical thinking through experiments and research .
- Introduction to the living world, including plants, animals, microorganisms, and the human body.
- Applying biological knowledge in everyday life and understanding the importance of environmental protection .

Content:

- Cell and its functions: cell structure, cell organelles , and basic cell processes.
- Genetics: basic genetic concepts, inheritance of traits, DNA, and biotechnology.
- Ecology: ecosystems, biodiversity , food chains, and nature conservation .
- The human body: the basic systems of the human body, their function and interrelationship.

Working methods:

- Lectures and laboratory work with the use of interactive tools and digital resources.
- Field research for the study of ecosystems and biodiversity .
- Group projects and discussions for solving more complex biological problems and research .
- Using technology, such as microscopes and biological analysis software, to enhance learning.

criteria:

- Written and oral exams: regular tests, control tasks, and final exams.
- Laboratory reports that include analysis of experimental data and conclusions.
- Projects and presentations involving research on biological topics and the application of biological knowledge.
- Class activity: participation in discussions, laboratory exercises, and group activities.

Physik
Objectives:

- Developing an understanding of basic physical laws and principles through theoretical and practical activities.
- Application of physics in everyday life through solving practical problems and experimentation.
- Developing research and experimentation skills through laboratory work and projects.
- Improving analytical and critical thinking through solving complex physical problems.

Content:

- Mechanics: basic concepts of mechanics, such as force, motion, energy, and laws of motion.
- Thermodynamics: basic concepts of thermodynamics, such as temperature, heat, and the laws of thermodynamics.
- Electricity and magnetism: basic concepts of electricity and magnetism , such as current, voltage, resistance, and magnetic fields.
- Optics: basic concepts of optics, such as light, reflection, refraction, and lenses.

Working methods:

- Lectures and demonstrations using multimedia content and digital tools.
- Experiments and laboratory work to study physical phenomena and laws.

HALLO WIR SIND IDSS

- Group projects and discussions to solve more complex physical problems and research .
- Using technology, such as simulations and physical analysis software, to enhance learning.

criteria:

- Written and oral exams: regular tests, control tasks, and final exams.
- Laboratory reports that include analysis of experimental data and conclusions.
- Projects and presentations that involve the exploration of physics topics and the application of physics knowledge.
- Class activity: participation in discussions, laboratory exercises, and group activities.

Chemie

Objectives:

- Understanding of basic chemical principles and reactions through theoretical and practical activities.
- Application of chemical knowledge in everyday life through solving practical problems and experimentation.
- Developing laboratory work skills through experiments and research .
- Improving analytical and critical thinking through solving complex chemical problems.

Content:

- Atomic structure: basic concepts of atomic structure, such as protons, neutrons, electrons, and the periodic table of elements.
- Chemical reactions: basic concepts of chemical reactions, such as reactants , products, energy, and reaction rate.
- Organic chemistry: basic concepts of organic chemistry, such as hydrocarbons, functional groups, and reactions of organic compounds.
- Analytical chemistry: basic concepts of analytical chemistry, such as qualitative and quantitative analysis, spectroscopy, and chromatography .

Working methods:

- Lectures and demonstrations using multimedia content and digital tools.
- Laboratory work and experiments to study chemical phenomena and reactions.
- Group projects and discussions to solve more complex chemical problems and research .
- Using technology, such as simulations and chemical analysis software, to enhance learning.

criteria:

- Written and oral exams: regular tests, control tasks, and final exams.
- Laboratory reports that include analysis of experimental data and conclusions.
- Projects and presentations that involve exploring chemical topics and applying chemical knowledge.
- Class activity: participation in discussions, laboratory exercises, and group activities.

Erdkunde (Geography)

Objectives:

- Developing understanding of geographic concepts and processes through theoretical and practical activities.
- Familiarity with different cultures, geographic areas, and environmental issues.
- Developing the skills of cartographic analysis through the creation of maps and the analysis of geographic data.

HALLO WIR SIND IDSS

- Applying geographical knowledge in everyday life and understanding the importance of environmental protection .

Content:

- Physical geography: basic concepts of physical geography, such as relief, climate, water, soil, and vegetation.
- Social geography: basic concepts of social geography, such as population, urbanization, economic activities, and cultural landscapes.
- Ecological geography: basic concepts of ecological geography, such as ecosystems, biodiversity , pollution , and sustainable development.
- Geographic Information Systems (GIS): basic concepts of GIS, such as cartographic techniques, spatial data analysis, and application of GIS in research .

Working methods:

- Lectures and cartographic exercises with the use of interactive tools and digital resources.
- Field research for the study of geographical phenomena and processes.
- Group projects and presentations for solving more complex geographical problems and research .
- Using technology, such as GIS software and digital maps, to enhance learning.

criteria:

- Written and oral exams: regular tests, control tasks, and final exams.
- Cartographic works that include the creation of maps and the analysis of geographic data.
- Projects and presentations involving the exploration of geographic topics and the application of geographic knowledge.
- Class activity: participation in discussions, field research , and group activities.

Geschichte (History)

Objectives:

- Developing an understanding of key historical events and their impact on the world today.
- Developing critical thinking and the ability to analyze historical sources.
- Promoting awareness of cultural heritage and different civilizations.

Content:

- Ancient history: the civilizations of Mesopotamia, Egypt, Greece and Rome.
- The Middle Ages: feudalism, the Crusades, the development of cities.
- The New Century: Renaissance, Reformation, Discoveries and Colonization.
- The modern period: revolutions, industrialization, world wars and the cold war.

Working methods:

- Lectures and discussions.
- Analysis of historical documents and sources.
- Group work and presentations.
- Visits to museums and historical sites.

criteria:

- Active participation in classes.
- Written papers and essays.
- Oral exams and presentations.
- Projects and research papers.

HALLO WIR SIND IDSS

Französisch (French language)
Objectives:
- Developing communication skills in French.
- Increasing understanding of French culture and customs.
- Developing reading and writing skills in French.

Content:
- Basic vocabulary and grammar.
- Conversational skills: basic dialogues, everyday situations.
- Reading and analysis of simple texts.
- Written compositions and letters.

Working methods:
- Interactive exercises and games.
- Work in pairs and group work.
- Listening to audio material and watching videos.
- Using digital tools and applications for language learning.

criteria:
- Active participation in classes and discussions.
- Written tests and assignments.
- Oral exams and presentations.
- Projects and research papers.

Sachkunde (Nature and Society)
Objectives:
- Developing awareness of the natural and social environment .
- Developing research and experimentation skills.
- Increasing understanding of environmental and social issues.

Content:
- Basic concepts from biology, geography and social sciences.
- Ecological systems and their protection.
- Social communities and their organization.
- Cultural diversity and globalization.

Working methods:
- Field work and excursions.
- Experiments and laboratory exercises.
- Group work and projects.
- Using multimedia resources and digital tools.

criteria:
- Active participation in classes and discussions.
- Written papers and reports.
- Oral exams and presentations.
- Projects and research papers.

Lebenskunde (Life Skills)
Objectives:
- Developing practical skills for everyday life.
- Increasing emotional intelligence and social skills.
- Promoting healthy lifestyle habits.

Content:
- Time management and organization.
- Problem solving and decision making.

HALLO WIR SIND IDSS

- Communication skills and teamwork.
- Health, nutrition and physical activity.

Working methods:

- Workshops and practical exercises.
- Group discussions and simulations.
- Individual development plans.
- Using digital tools for self-evaluation .

criteria:

- Active participation in workshops and discussions.
- Written papers and reflections.
- Practical tasks and simulations.
- Projects and research papers.

Meine Umwelt (My Environment)

Objectives:

- Developing environmental awareness and responsible behavior towards the environment.
- Understanding of basic environmental principles and issues.
- Promoting sustainable practices and lifestyles.

Content:

- Ecological systems and their protection.
- Climate change and its effects.
- Sustainability and recycling.
- Activities in nature and conservation biodiversity .

Working methods:

- Field work and excursions.
- Projects and campaigns for environmental protection.
- Workshops and practical exercises.
- Using multimedia sources and digital tools.

criteria:

- Active participation in field work and workshops.
- Written papers and reports.
- Oral exams and presentations.
- Projects and research papers.

Informatics (Informatics)

Objectives:

- Developing digital literacy and basic IT skills.
- Understanding of the basic principles of programming and computing.
- Increasing awareness of internet safety and digital ethics.

Content:

- Basic concepts and functions of computers.
- Programming and algorithms.
- Working with software and applications.
- Internet security and data protection.

Working methods:

- Work on computers and programming.
- Group projects and assignments.
- Using interactive software tools.
- Discussions on digital ethics and security.

HALLO WIR SIND IDSS

criteria:

- Active participation in practical work and discussions.
- Written tests and assignments.
- Oral exams and presentations.
- Projects and research papers.

Technische Erziehung (Technical Education)

Objectives:

- Developing technical skills and understanding of engineering principles.
- Promoting creative thinking and innovation.
- Understanding technological processes and their impact on society.

Content:

- Basic technical skills and tools.
- Design and production of technical drawings.
- Principles of Engineering and Technology.
- Work on technical projects and models.

Working methods:

- Practical exercises and working with tools.
- Group projects and assignments.
- Using digital design tools.
- Discussions on technical innovations and their impact.

criteria:

- Active participation in practical work and discussions.
- Written papers and technical drawings.
- Oral exams and presentations.
- Projects and research papers.

Grundtechniken (Basic techniques)

Objectives:

- Developing basic practical skills for everyday work.
- Promoting creativity and independence.
- Understanding of simple technical processes.

Content:

- Handicrafts and craft skills.
- Basic repairs and maintenance .
- Using simple tools and materials.
- Projects and creative works.

Working methods:

- Practical exercises and working with tools.
- Group projects and assignments.
- Using digital planning tools.
- Discussions on craft skills and their application.

criteria:

- Active participation in practical work and discussions.
- Written works and technical drawings.
- Oral exams and presentations.
- Projects and research papers.

Gesellschaftslehre (Social Sciences)

Objectives:

- Developing an understanding of social structures and political systems.
- Promoting critical thinking and analysis of social issues.
- Increasing awareness of the rights and obligations of citizens.

Content:

- Basic concepts from sociology, politics and economics.
- Social institutions and their role.
- Political systems and democracy.
- Global issues and problems.

Working methods:

- Lectures and discussions.
- Analysis of social sources and documents.
- Group work and projects.
- Using multimedia resources and digital tools.

criteria:

- Active participation in classes and discussions.
- Written papers and essays.
- Oral exams and presentations.
- Projects and research papers.

Ethics

Objectives:

- Developing moral thinking and ethical behavior .
- Understanding different philosophical and moral views.
- Promoting critical thinking on ethical issues.

Content:

- Basic concepts from ethics and philosophy.
- Ethics and moral values.
- Ethical dilemmas and problem solving.
- Application of ethics in everyday life.

Working methods:

- Lectures and discussions.
- Analysis of philosophical texts and sources.
- Group work and projects.
- Using multimedia resources and digital tools.

criteria:

- Active participation in classes and discussions.
- Written papers and essays.
- Oral exams and presentations.
- Projects and research papers.

Kunst

Objectives:

- Developing creativity and artistic skills.
- Understanding of different artistic styles and techniques.
- Promoting aesthetic sensitivity and artistic expression.

Content:

- Basic drawing and painting techniques.
- Sculpture and modeling.
- History of art and analysis of works of art.
- Work on art projects.

HALLO WIR SIND IDSS

Working methods:
- Practical exercises and work with materials.
- Group projects and assignments.
- Using digital tools for artistic expression.
- Visits to galleries and art exhibitions .

criteria:
- Active participation in practical work and discussions.
- Written works and technical drawings.
- Oral exams and presentations.
- Projects and research papers.

Sport (Physical and health culture)
Objectives:
- Developing physical skills and fitness.
- Promoting a healthy lifestyle and physical activity.
- Understanding the importance of physical health.

Content:
- Basic sports skills and games.
- Physical exercises and fitness training.
- Health, nutrition and physical activity.
- Work on sports projects and competitions.

Working methods:
- Practical exercises and trainings.
- Group projects and assignments.
- Using digital tools for planning training.
- Discussions about health and physical activity.

criteria:
- Active participation in practical work and discussions.
- Written papers and reports.
- Oral exams and presentations.
- Projects and research papers.

Musik (Musical culture)
Objectives:
- Developing musical skills and creativity.
- Understanding of different musical styles and instruments.
- Promoting musical expression and cultural awareness.

Content:
- Basic techniques of playing instruments.
- Singing and voice exercises.
- History of music and analysis of musical works.
- Work on music projects and concerts.

Working methods:
- Practical exercises and work with instruments.
- Group projects and assignments.
- Using digital tools for musical expression.
- Visits to concerts and musical events.

criteria:
- Active participation in practical work and discussions.
- Written works and musical recordings.

HALLO WIR SIND IDSS

- Oral exams and presentations.
- Projects and research papers.

Aftermachtprogramm
Objectives:
- Providing additional activities that support students in their interests .
- Developing social skills and teamwork.
- Promoting creativity and physical activity.

Content:
- Sports sections and trainings.
- Art workshops and projects.
- Additional academic classes and learning support.
- Social activities and volunteer work.

Working methods:
- Workshops and practical exercises.
- Group projects and assignments.
- Using digital tools to organize activities.
- Discussions and reflections on the achieved results.

criteria:
- Active participation in activities and projects.
- Written papers and reports.
- Oral exams and presentations.
- Projects and research papers.

Detailed description of goals, content, work methods and grading criteria by class

First grade
Objectives:
- Developing basic reading and writing skills.
- Acquisition of basic mathematical operations (addition and subtraction).
- Getting to know the world of nature and society.
- Developing motor skills and social skills through play.

Content:
- Beginning reading: recognizing letters, sounds and building simple words.
- Initial writing: correct pen holding, writing upper and lower case letters.
- Basic mathematical operations: addition and subtraction of numbers up to 20.
- Nature and society: basic concepts about the environment, plants, animals, family and community.

Working methods:
- Interactive games and activities.
- Using picture books and educational toys.
- Group work and collaborative activities.
- Visits to local parks and nature reserves.

criteria:
- Active participation in classes and games.
- Written papers and exercises.
- Oral answers to simple questions.
- Projects and exhibitions of works.

HALLO WIR SIND IDSS

Second grade

Objectives:

- Expanding knowledge of basic mathematical operations.
- Further development of reading and writing skills, with an emphasis on reading comprehension.
- Research of basic concepts in natural sciences and social subjects.
- Developing social and emotional skills.

Content:

- Reading: reading short stories and fairy tales, understanding what is read.
- Writing: writing simple sentences and short compositions.
- Mathematics: addition and subtraction of numbers up to 100, introduction to multiplication .
- Nature and society: changes in nature, seasons, importance of community and basic human activities.

Working methods:

- Working with books and picture books.
- Group work and discussions.
- Experiments and practical activities.
- Using multimedia tools and educational games.

criteria:

- Active participation in classes and group activities.
- Written tests and assignments.
- Oral responses and presentations.
- Projects and research papers.

Third grade

Objectives:

- Learning multiplication and division.
- Further development of language skills through more complex reading and writing.
- Familiarity with local geography and history.
- Exploring natural phenomena through practical activities and experiments.

Content:

- Reading: reading longer stories and books, analyzing characters and events.
- Writing: writing essays, letters and short stories.
- Mathematics: multiplication and division of numbers up to 100, introduction to fractions.
- Nature and society: local geography, historical events, basic natural phenomena.

Working methods:

- Reading books and analyzing what has been read.
- Group work and discussions.
- Fieldwork and visits to local historical sites.
- Experiments and practical activities.

criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

HALLO WIR SIND IDSS

Fourth grade

Objectives:

- Expanding math skills through learning about fractions and decimals.
- Developing critical thinking through the analysis of read texts.
- Performing more complex experiments in the natural sciences.
- Study of national history and culture.

Content:

- Reading: reading literary works, analyzing the theme, message and characters.
- Writing: writing essays, journals and reports.
- Mathematics: fractions, decimal numbers, basic geometry.
- Nature and society: national history, cultural heritage, basic ecological principles.

Working methods:

- Reading and analysis of literary works.
- Group work and discussions.
- Experiments and laboratory exercises.
- Using multimedia resources and educational games.

criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

Fifth grade

Objectives:

- Application of mathematical skills in problem solving.
- Developing the ability to independently read and analyze texts.
- Studying the basics of biology, chemistry and physics through experiments.
- Expanding knowledge on geographical and historical topics.

Content:

- Reading: reading and analyzing more complex texts.
- Writing: writing essays, reports and research papers.
- Mathematics: application of mathematical operations in solving problems, introduction to algebra.
- Nature and society: basic concepts in biology, chemistry and physics, geography and history.

Working methods:

- Reading and analysis of texts.
- Group work and discussions.
- Experiments and laboratory exercises.
- Using multimedia sources and digital tools.

criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

Sixth grade

Objectives:

- Mastering advanced mathematical operations such as algebra and geometry.
- Analysis and interpretation of more complex texts.

HALLO WIR SIND IDSS

- Performing experiments in natural sciences.
- Research historical and cultural phenomena.

Content:

- Reading: reading and analyzing literary works, scientific texts and articles.
- Writing: writing essays, research reports and research papers.
- Mathematics: algebra, geometry, advanced mathematical operations.
- Nature and society: experiments in biology, chemistry and physics, analysis of historical and cultural phenomena.

Working methods:

- Reading and analysis of texts.
- Group work and discussions.
- Experiments and laboratory exercises.
- Using multimedia resources and digital tools.

criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

Seventh grade

Objectives:

- Mastery of more complex mathematical concepts, including linear equations and basic principles of statistics.
- Developing essay writing skills and analyzing literary genres.
- More detailed study of biology, chemistry and physics.
- Exploring global history and geography.

Content:

- Reading: reading and analyzing literary genres and authors.
- Writing: writing essays, literary analyzes and reports.
- Mathematics: linear equations, basic principles of statistics, advanced geometry.
- Nature and Society: In-depth study of biology, chemistry and physics, global history and geography.

Working methods:

- Reading and analysis of texts.
- Group work and discussions.
- Experiments and laboratory exercises.
- Using multimedia resources and digital tools.

criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

Eighth grade

Objectives:

- Solve more complex math problems, including quadratic equations and advanced geometry.
- Interpretation and analysis of literary works.
- Development of argumentative skills through essay writing.
- Experimental works in physics, chemistry and biology.

HALLO WIR SIND IDSS

- Study of political systems and economic theories.

Content:

- Reading: reading and analyzing literary works, scientific articles and texts.
- Writing: writing essays, research reports and research papers.
- Mathematics: quadratic equations, advanced geometry, statistical analysis.
- Nature and society: experiments in physics, chemistry and biology, political systems and economic theories.

Working methods:

- Reading and analysis of texts.
- Group work and discussions.
- Experiments and laboratory exercises.
- Using multimedia resources and digital tools.

criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

Ninth grade

Objectives:

- Preparation for secondary education through the mastery of advanced mathematical topics such as trigonometry and statistical analysis.
- Interpretation of complex texts and development of argumentative writing.
- In-depth study of biological systems, chemical reactions and physical principles.
- Analysis of global phenomena and historical events.

Content:

- Reading: reading and analyzing complex texts, scientific articles and literary works.
- Writing: writing argumentative essays, research reports and research papers.
- Mathematics: trigonometry, statistical analysis, advanced mathematical operations.
- Nature and society: in-depth study of biological systems, chemical reactions and physical principles, analysis of global phenomena and historical events.

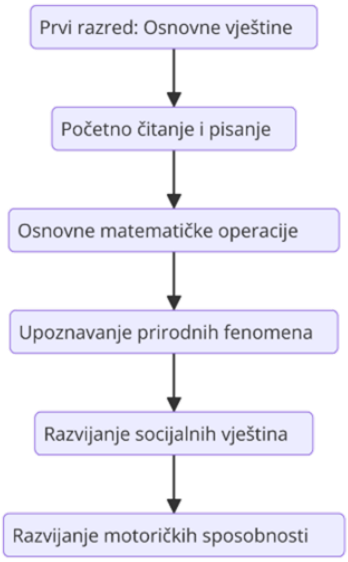
Working methods:

- Reading and analysis of texts.
- Group work and discussions.
- Experiments and laboratory exercises.
- Using multimedia sources and digital tools.

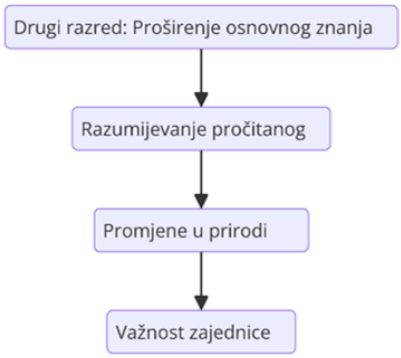
criteria:

- Active participation in classes and discussions.
- Written papers and tests.
- Oral responses and presentations.
- Projects and research papers.

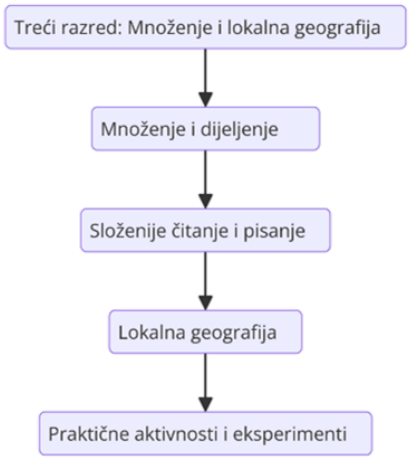
HALLO
WIR
SIND
IDSS



Prvi razred: Osnovne vještine
Početno čitanje i pisanje
Osnovne matematičke operacije
Upoznavanje prirodnih fenomena
Razvijanje socijalnih vještina
Razvijanje motoričkih sposobnosti

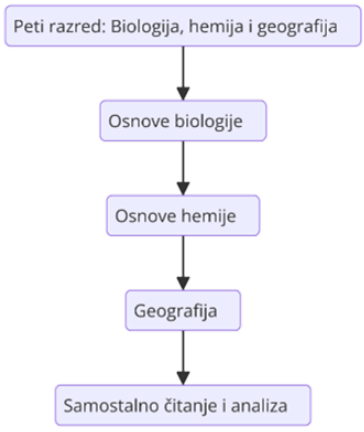


Drugi razred: Proširenje osnovnog znanja
Razumijevanje pročitanog
Promjene u prirodi
Važnost zajednice

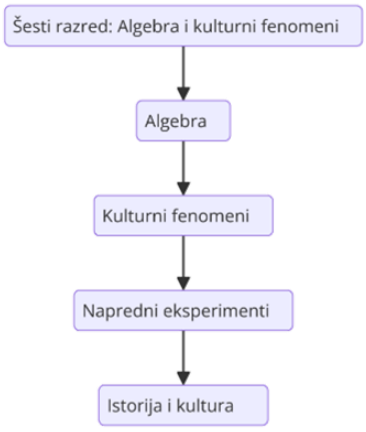


Treći razred: Množenje i lokalna geografija
Množenje i dijeljenje
Složenije čitanje i pisanje
Lokalna geografija
Praktične aktivnosti i eksperimenti

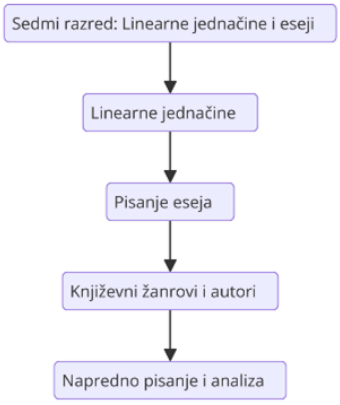
Četvrti razred: Razlomci i nacionalna istorija
Razlomci i decimalni brojevi
Razvijanje kritičkog mišljenja
Složeniji eksperimenti
Nacionalna istorija



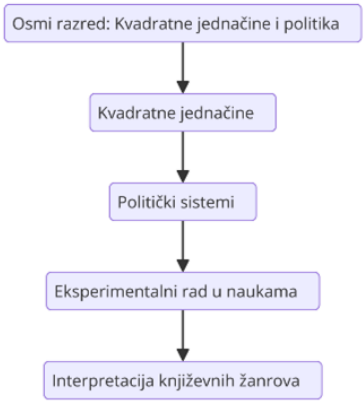
Peti razred: Biologija, hemija i geografija
Osnove biologije
Osnove hemije
Geografija
Samostalno čitanje i analiza



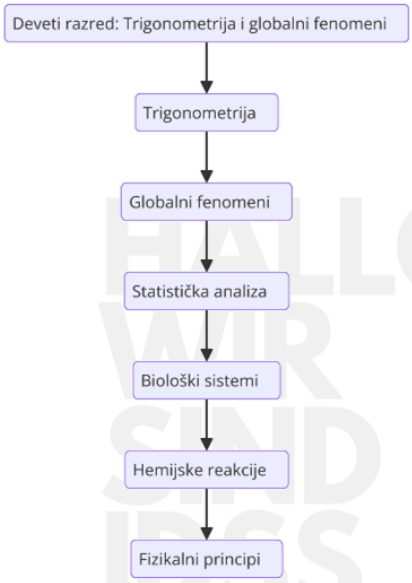
Šesti razred: Algebra i kulturni fenomeni
Algebra
Kulturni fenomeni
Napredni eksperimenti
Istorija i kultura



Sedmi razred: Linearne jednačine i eseji
Linearne jednačine
Pisanje eseja
Književni žanrovi i autori
Napredno pisanje i analiza



Osmi razred: Kvadratne jednačine i politika
Kvadratne jednačine
Politički sistemi
Eksperimentalni rad u naukama
Interpretacija književnih žanrova



Deveti razred: Trigonometrija i globalni fenomeni
Trigonometrija
Globalni fenomeni
Statistička analiza
Biološki sistemi
Hemijske reakcije
Fizikalni principi

2.2. Contents

Thematic plan

Outline plans for each class by subject and by month

First grade

Mathematik (Mathematics)

September:
- **Basic numbers and operations:** Numbers up to 100, addition and subtraction.
- **Geometry:** Lines, angles, basic figures.

October:
- **Multiplication and Division:** Basics, Times Table .
- **Geometry:** Design and measurement, basic shapes.

November:
- **Numbers and operations:** Numbers up to 1000, addition and subtraction of large numbers.
- **Geometry:** Area and volume of simple figures.

December:
- **Decimal system:** Understanding decimal numbers.
- **Measurement:** Length, mass, time.

January:
- **Factions:** Introduction to factions, simple factions.
- **Geometry:** Spatial forms and their properties.

February:
- **Fractions:** Adding and subtracting fractions.
- **Measurement:** Volume and capacity.

March:
- **Algebra:** An introduction to the basic concepts of algebra.
- **Geometry:** Transformations (translation, rotation, reflection).

April:
- **Algebra:** Simple equations.
- **Geometry:** Symmetry and patterns.

May:
- **Proportions and percentages:** Understanding and applying.
- **Geometry:** Advanced geometric shapes and their analysis.

June:
- **Review and preparation for final exams.**
- **Projects:** Application of mathematical concepts in real situations.

Deutsch (German language)

September:
- **Introductory lessons:** Basic phrases, presentation.
- **Grammar:** Articles (der , die , das), basic verbs.

October:
- **Reading and writing:** Short stories, simple essays.
- **Grammar:** Adjectives, adjective phrases.

HALLO WIR SIND IDSS

November:
- **Speech:** Speaking exercises, dialogues.
- **Grammar:** Perfect , past tense.

December:
- **Reading:** Analysis of short texts.
- **Grammar:** Prepositions and prepositional phrases.

January:
- **Writing:** Writing short essays and letters.
- **Grammar:** Future, future tense.

February:
- **Reading:** Deeper analysis of texts.
- **Grammar:** Pronouns, relative clauses.

March:
- **Speech:** Debate exercises, presentations.
- **Grammar:** Conjugation of verbs.

April:
- **Writing:** Creative writing, stories.
- **Grammar:** Complex sentences.

May:
- **Reading:** Literary texts.
- **Grammar:** Subjunctive, conditional sentences.

June:
- **Review and preparation for final exams.**
- **Projects:** Presentations and group work.

Sachkunde (Nature and Society)

September:
- **Introduction to nature and society:** Basic terms.
- **Topic:** My body.

October:
- **Theme:** Family and society.
- **Experiments:** Simple experiments related to nature.

November:

HALLO WIR SIND IDSS

- **Topic:** Animals and their habitats.
- **Projects:** Make a presentation about your favorite animal.

December:
- **Topic:** Plants and their importance.
- **Experiments:** Observation of plant growth.

January:
- **Topic:** Water and air.
- **Activities:** Discussion and experimentation.

February:
- **Topic:** Earth and its resources.
- **Projects:** Creating a model of the Earth.

March:
- **Topic:** Weather and climate.
- **Activities:** Weather monitoring.

April:
- **Topic:** Energy and its types.
- **Experiments:** Simple experiments with energy.

May:
- **Topic:** People and their environments .
- **Projects:** Creating a map of the local community.

June:
- **Review and preparation for final exams.**
- **Projects:** Application of learned concepts in real situations.

Ethik (Ethics)

September:
- **Introduction to ethics:** Basic terms.
- **Topic:** Respect and tolerance.

October:
- **Topic:** Honesty and integrity.
- **Discussions:** Examples from everyday life.

November:
- **Topic:** Compassion and empathy.
- **Activities:** Group activities to develop empathy.

December:
- **Topic:** Rights and Responsibilities.
- **Discussions:** Debate on children's rights.

January:
- **Topic:** Justice and fair play .
- **Activities:** Examples of justice in society.

February:
- **Topic:** Responsibility for self and others.
- **Projects:** Developing plans to help others.

March:
- **Topic:** Moral dilemmas.
- **Discussions:** Analysis and resolution of moral dilemmas.

April:
- **Topic:** Friendship and relationships.
- **Activities:** Workshops on building healthy relationships.

HALLO WIR SIND IDSS

May:
- **Topic:** Culture and diversity.
- **Projects:** Presentations about different cultures.

June:
- **Review and preparation for final exams.**
- **Projects:** Application of learned ethical principles in real situations.

Meine Umwelt (My Environment)

September:
- **Introduction to the environment:** Basic terms.
- **Topic:** Local community.

October:
- **Topic:** Nature and its resources.
- **Activities:** Exploring local nature.

November:
- **Topic:** Ecology and environmental protection.
- **Projects:** Environmental projects in the community.

December:
- **Topic:** Recycling and reuse.
- **Activities:** Workshops on recycling.

January:
- **Topic:** Energy and its conservation .
- **Experiments:** Simple experiments with energy.

February:
- **Topic:** Water and its importance.
- **Projects:** Research on water sources.

March:
- **Topic:** Pollution and its consequences.
- **Discussions:** Ways to reduce pollution .

April:
- **Topic:** Animals and their habitats.
- **Activities:** Observation and protection of local fauna.

May:
- **Topic:** Plants and their importance.
- **Projects:** Planting and caring for plants.

June:
- **Review and preparation for final exams.**
- **Projects:** Application of learned concepts in real situations.

Kunst (Art)

September:
- **Basic elements of art:** Line, shape, color.
- **Projects:** Drawing basic shapes.

October:
- **Drawing and painting techniques:** Pencil, crayons, tempera.
- **Projects:** Painting natural motifs.

November:
- **Sculpture and modeling:** Clay, plasticine.

HALLO WIR SIND IDSS

- **Projects:** Making simple sculptures.

December:
- **Collage and mosaic:** Production techniques.
- **Projects:** Collage from recycled materials.

January:
- **Perspective and proportions:** Basic principles.
- **Projects:** Drawing a landscape with perspective.

February:
- **Portraits and the human figure:** Drawing techniques.
- **Projects:** Drawing portraits.

March:
- **Abstract Art:** An Introduction and Techniques.
- **Projects:** Making abstract compositions.

April:
- **Art throughout history:** An overview of the different eras.
- **Projects:** Interpretation of famous works.

May:
- **Modern and contemporary artists:** Getting to know the works.
- **Projects:** Inspiration by modern art.

June:
- **Review and preparation for the final exhibition .**
- **Projects:** Organization and installation of an exhibition of works.

Sport (Physical and Health Culture)

September:
- **Basic physical activities:** Running, jumping.
- **Games:** Team sports game.

October:
- **Gymnastics:** Basic exercises.
- **Activities:** Stretching and flexibility exercises.

November:
- **Athletics:** Running, jumping, throwing.
- **Activities:** Mini competitions.

December:
- **Sports games:** Basketball, football.
- **Activities:** Basic skills training.

January:
- **Winter sports:** Ice skating, skiing (if possible).
- **Activities:** Balance and coordination exercises.

February:
- **Strength exercises:** Basic strength exercises.
- **Activities:** Circuit training.

March:
- **Dance and rhythm:** Basic dance movements.
- **Activities:** Choreographies and dance games.

April:
- **Swimming:** Basic techniques (if possible).
- **Activities:** Breathing and swimming exercises.

May:

HALLO WIR SIND IDSS

- **Rugby and handball:** Basic skills.
- **Activities:** Training and mini matches.

June:

- **Review and preparation for final competitions.**
- **Activities:** Organization of sports day.

Musik (Music Culture)

September:

- **Basic elements of music:** Rhythm, melody.
- **Activities:** Singing simple songs.

October:

- **Instruments:** Introduction to different instruments.
- **Activities:** Listening and recognizing sounds.

November:

- **Notes and notation of music:** Basic principles.
- **Activities:** Writing simple notes.

December:

- **Music and movement:** Correlation between music and dance.
- **Activities:** Choreography with music.

January:

- **Singing in a choir:** Basic techniques.
- **Activities:** Preparation for choir performances.

February:

- **Music Through History:** An Overview of the Different Eras.
- **Activities:** Listening and analyzing well-known works.

March:

- **Composing:** Basic principles.
- **Activities:** Creating simple melodies.

April:

- **Music and Emotions:** How Music Affects Emotions.
- **Activities:** Discussion and analysis.

May:

- **Contemporary music:** Introduction to modern genres.
- **Activities:** Analysis and listening.

June:

- **Review and preparation for final performances.**
- **Activities:** Organization of a musical event.

Nachmittingsprogramm (Afternoon Program)

September:

- **Dating and socializing:** Dating games.
- **Activities:** Creative workshops.

October:

- **Reading and writing:** Literary workshops.
- **Activities:** Written creativity.

November:

- **Sports and recreation:** Outdoor games.
- **Activities:** Sports competition games.

HALLO WIR SIND IDSS

December:
- **Artistic activities:** Art workshops.
- **Activities:** Making holiday decorations.

January:
- **Science activities:** Simple experiments.
- **Activities:** Scientific workshops.

February:
- **Board Games:** Strategy and Logic.
- **Activities:** Tournaments in board games.

March:
- **Dance and music:** Dance workshops.
- **Activities:** Choreographies and dance games.

April:
- **Environmental activities:** Recycling and environmental protection.
- **Activities:** Ecological projects.

May:
- **Workshops:** Various creative workshops.
- **Activities:** Making handicrafts.

June:
- **Review and preparation for the final performance.**
- **Activities:** Organization and staging of the event.

Grade 2

Mathematik (Mathematics)

September:
- Numbers to 100: Recognizing and writing numbers.
- Activities: Game with numbers, many lines.

October:
- Basic operations: Addition and subtraction up to 20.
- Activities: Mathematical games, workbooks.

November:
- Geometry: Recognition of basic shapes.
- Activities: Drawing shapes, puzzles.

December:
- Word problems: Solving simple word problems.
- Activities: Group work, discussions.

January:
- Measurement: Length, mass, volume.
- Activities: Practical experiments, measuring objects.

February:
- Time: Reading the clock and calendar.
- Activities: Games with clocks, making calendars.

March:
- Money: Recognizing and using money.
- Activities: Trade game, price calculation.

April:
- Fractions: Introducing the concept of fractions.
- Activities: Dividing objects into parts, drawings.

HALLO WIR SIND IDSS

May:
- Repetition: Review and repetition of learned material.
- Activities: Quizzes, group games.

June:
- Preparing for Third Grade: An Introduction to More Complex Problems.
- Activities: Workbooks, discussions.

Deutsch (German Language)

September:
- Getting to know the classroom and teachers.
- Activities: Familiarity games, simple dialogues.

October:
- Basic vocabulary: Colors, numbers, classroom objects.
- Activities: Word cards, rhymes.

November:
- Grammar: Simple sentences and questions.
- Activities: Workbooks, writing exercises.

December:
- Reading: Simple stories and fairy tales.
- Activities: Reading aloud, discussion of what was read.

January:
- Writing: Simple descriptions and letters.
- Activities: Writing letters, drawing and describing.

February:
- Listening: Understanding simple conversations.
- Activities: Listening to audio, answering questions.

March:
- Speech: Short dialogues and presentations.
- Activities: Role play, presentations in front of the class.

April:
- Culture: Getting to know German customs and holidays.
- Activities: Holiday workshops, discussions about customs.

May:
- Repetition: Review and repetition of learned material.
- Activities: Quizzes, group games.

June:
- Third Grade Preparation: An Introduction to More Complex Topics.
- Activities: Workbooks, discussions.

Englisch (English)

September:
- Getting to know basic phrases.
- Activities: Familiarity games, simple dialogues.

October:
- Basic vocabulary: Colors, numbers, classroom objects.
- Activities: Word cards, rhymes.

- Activities: Holiday workshops, discussions about customs.

May:

HALLO WIR SIND IDSS

- Repetition: Review and repetition of learned material.
- Activities: Quizzes, group games.

June:

- Third Grade Preparation: An Introduction to More Complex Topics.
- Activities: Workbooks, discussions.

Sachkunde (Nature and Society)

September:

- Getting to know the natural environment .
- Activities: Excursions in nature, drawing natural phenomena.

October:

- Animals and plants: Identifying local flora and fauna.
- Activities: Drawing and describing animals and plants.

November:

- Weather and climate: Basic terms about weather conditions.
- Activities: Weather monitoring, making weather maps.

December:

- Human body: Basic parts of the body and their function.
- Activities: Drawing body parts, simple experiments.

January:

- Space: Basic concepts about planets and stars.
- Activities: Drawing the universe, making planet models.

February:

- Ecology: Learning about environmental protection.
- Activities: Recycling, ecological workshops.

March:

- Society: Learning about community and social rules.
- Activities: Role plays, discussions about rules of conduct .

April:

- Water and its importance: Basic concepts about water and its importance.
- Activities: Experiments with water, drawing water cycles.

May:

- Energy: Basic terms about energy sources.
- Activities: Making models of energy sources, discussions.

June:

- Repetition and preparation for the third grade.
- Activities: Workbooks, discussions.

Ethik (Ethics)

September:

- Acquaintance with basic ethical terms.
- Activities: Discussions, role plays.

October:

- Respect and tolerance: Learning about the importance of respect.
- Activities: Group activities, drawing.

November:

- Fairness and Justice: Understanding the Concepts of Fairness .
- Activities: Role plays, discussions.

HALLO WIR SIND IDSS

December:
- A good friend: Characteristics of a good friend.
- Activities: Conversations, friendship drawing.

January:
- Responsibility: Learning about personal responsibility.
- Activities: Workshops, role-playing games.

February:
- Caring for others: Learning about empathy and caring for others.
- Activities: Group activities, drawing.

March:
- Working together: The importance of teamwork.
- Activities: Group games, projects.

April:
- Honesty: Importance of honesty in life.
- Activities: Role plays, discussions.

May:
- Repetition: Review and repetition of learned material.
- Activities: Quizzes, group games.

June:
- Third Grade Preparation: An Introduction to More Complex Topics.
- Activities: Workbooks, discussions.

Meine Umwelt (My Environment)

September:
- Getting to know the environment: Basic terms.
- Activities: Excursions, drawing natural phenomena.

October:
- Plants and Animals: Learning about local flora and fauna.
- Activities: Drawing and describing plants and animals.

November:
- Ecology: Basic concepts of environmental protection.
- Activities: Recycling, ecological workshops.

- Activities: Experiments with water, drawing water cycles.

January:
- Weather and climate: Basic terms about weather conditions.
- Activities: Weather monitoring, making weather maps.

February:
- Energy: Learning about energy sources.
- Activities: Making models of energy sources, discussions.

March:
- Pollution: Learning about pollution and its consequences.
- Activities: Environmental games, discussions.

April:
- Recycling: Importance and process of recycling.
- Activities: Recycling workshops, drawing.

May:
- Repetition and preparation for the third grade.

HALLO WIR SIND IDSS

- Activities: Workbooks, discussions.

June:
- Review and preparation for the final performance.
- Activities: Organization and staging of the event.

Kunst (Art)

September:
- Familiarization with basic drawing techniques.
- Activities: Drawing with a pencil, crayons.

October:
- Colors: Learning about different colors and their combinations.
- Activities: Painting with water colors, temperas.

November:
- Shape and Space: Learning about basic shapes and space.
- Activities: Modeling with clay, drawing shapes.

December:
- Art and the Holidays: Making Holiday Decorations.
- Activities: Making decorations, drawing holiday motifs.

January:
- Textures: Getting to know different textures.
- Activities: Collages, work with different materials.

February:
- Portraits: Learning to draw faces.
- Activities: Portrait drawing, pair work.

March:
- Nature: Inspiration from nature.
- Activities: Drawing landscapes, plants.

April:
- Sculpture: Basic terms about sculpture.
- Activities: Modeling with clay, making sculptures.

May:
- Repetition: Review and repetition of learned material.
- Activities: Exhibition of works, discussions.

June:
- Third Grade Preparation: An Introduction to More Complex Techniques.
- Activities: Workbooks, discussions.

Sport (Physical and Health Culture)

September:
- Getting to know the basic exercises.
- Activities: Familiarization games, basic exercises.

October:
- Athletics: Running, jumping, throwing.
- Activities: Outdoor games, competitions.

November:
- Gymnastics: Basic gymnastic exercises.
- Activities: Exercises on mats, stretching.

December:

HALLO WIR SIND IDSS

- Winter Sports: Learning about winter sports.
- Activities: Snow games, ice skating.

January:
- Coordination: Exercises to improve coordination.
- Activities: Ball games, polygons.

February:
- Teamwork: Games that develop team spirit.
- Activities: Group games, relays.

March:
- Dance and rhythm: Basic dance movements.
- Activities: Dance workshops, choreography.

April:
- Outdoor play: Games in the fresh air.
- Activities: Competitive games, recreational activities.

May:
- Repetition: Review and repetition of learned material.
- Activities: Sports quizzes, competitions.

June:
- Preparation for third grade: Introduction to more complex sports.
- Activities: Workbooks, discussions.

Musik (Music Culture)

September:
- Familiarity with basic musical terms.
- Activities: Singing simple songs, listening to music.

October:
- Rhythm: Learning about rhythm and its importance.
- Activities: Beating the rhythm, playing with the music.

November:
- Instruments: Learning about different musical instruments.
- Activities: Making simple instruments, playing.

December:
- Holiday Music: Learning Holiday Songs.
- Activities: Singing holiday songs, listening to music.

January:
- Voice: Learning about the importance of voice.
- Activities: Voice exercises, group singing.

February:
- Composition: Basic elements of composing .
- Activities: Making your own songs, playing with notes.

March:
- Dance and music: Dancing to music.
- Activities: Dance workshops, choreography.

April:
- Culture: Getting to know musical culture.
- Activities: Listening to different types of music, discussions.

May:
- Repetition: Review and repetition of learned material.
- Activities: Quizzes, group games.

HALLO WIR SIND IDSS

June:
- Preparation for third grade: An introduction to more complex musical concepts.
- Activities: Workbooks, discussions.

Nachmittingsprogramm (Afternoon Program)

September:
- Dating and socializing: Dating games.
- Activities: Creative workshops.

October:
- Reading and writing: Literary workshops.
- Activities: Written creativity.

November:
- Sports and recreation: Outdoor games.
- Activities: Sports competition games.

December:
- Artistic activities: Art workshops.
- Activities: Making holiday decorations.

January:
- Science activities: Simple experiments.
- Activities: Scientific workshops.

February:

- **Activities:** Environmental projects and presentations.

June:
- **Review and review:** Repetition of all learned concepts.
- **Activities:** Quizzes and games to review the material.

Kunst (Art)

September:
- **Basic art concepts:** Colors and shapes.
- **Activities:** Drawing and painting basic shapes.

October:
- **Drawing techniques:** Basics of drawing.
- **Activities:** Pencil drawing exercises.

November:
- **Painting:** Basics of painting.
- **Activities:** Painting with water colors.

December:
- **Sculptures:** Basics of modeling.
- **Activities:** Making clay sculptures.

January:
- **Graphics:** Basics of graphics.
- **Activities:** Making graphics using the printing technique.

February:
- **Applied Arts:** Basics of Applied Arts.
- **Activities:** Making decorative items.

March:
- **Photography:** Basics of photography.
- **Activities:** Photography and photo analysis.

April:
- **Design:** Basics of Design.
- **Activities:** Design projects.

May:
- **Works of Art:** Analysis of famous works of art.
- **Activities:** Discussions and projects related to works of art.

June:

HALLO WIR SIND IDSS

- **Review and review:** Repetition of all learned concepts.
- **Activities:** Exhibition of works and repetition of materials.

Sport (Physical and Health Culture)

September:
- **Introduction to physical culture:** Basic concepts and exercises.
- **Activities:** Games and basic exercises.

October:
- **Gymnastics:** Basics of gymnastics.
- **Activities:** Stretching and coordination exercises.

November:
- **Athletics:** Fundamentals of Athletics.
- **Activities:** Running and jumping.

December:
- **Team sports:** The basics of team sports.
- **Activities:** Football, basketball and volleyball games.

January:
- **Individual sports:** Basics of individual sports.
- **Activities:** Games of tennis and badminton.

February:
- **Swimming:** Basics of swimming.
- **Activities:** Swimming exercises.

March:
- **Health:** The importance of physical activity for health.
- **Activities:** Workshops on health and sports.

April:
- **Dance:** Basics of Dance.
- **Activities:** Dance and choreography exercises.

May:
- **Competitions:** Organization of sports competitions.
- **Activities:** Games and competitions.

June:
- **Review and review:** Repetition of all learned concepts.
- **Activities:** Games and quizzes to review the material.

Musik (Musical Culture)

September:
- **Introduction to music:** Basic musical terms.
- **Activities:** Listening to music and discussion.

October:
- **Instruments:** Introduction to musical instruments.
- **Activities:** Playing basic instruments.

November:
- **Singing:** Basics of singing.
- **Activities:** Singing songs and voice exercises.

December:
- **Rhythm:** Understanding rhythm.
- **Activities:** Rhythm exercises and rhythm games.

HALLO WIR SIND IDSS

January:
- **Melody:** Basics of melody.
- **Activities:** Melodic line exercises.

February:
- **Composition:** Basics of composing .
- **Activities:** Creating simple musical compositions.

March:
- **Musical styles:** Different musical styles.
- **Activities:** Listening and analyzing musical styles.

April:
- **Music History:** Basics of Music History.
- **Activities:** Projects and presentations.

May:
- **Music theory:** Basics of music theory.
- **Activities:** Music theory exercises.

June:
- **Review and review:** Repetition of all learned concepts.
- **Activities:** Quizzes and games to review the material.

Nachmittingsprogramm (Afternoon Program)

September:
- **Getting to know each other:** Getting to know each other, various social games for the development of mutual trust and communication among students.
- **Activities:** Creative workshops, including drawing, painting, making collages, and other activities that encourage children's creativity and imagination.

October:
- **Reading and writing:** Literary workshops, reading stories, analyzing characters and events, and writing short essays.
- **Activities:** Written creativity, where children write their own stories, poems or short scripts for plays, and exchange ideas with others.

November:
- **Sports and recreation:** Outdoor games such as football, basketball, running and other physical activities that encourage team spirit and physical fitness.
- **Activities:** Sports competition games, organization of mini-tournaments, competitions in different sports and games.

December:
- **Art activities:** Art workshops, drawing, painting, modeling, and learning about different art techniques and styles.
- **Activities:** Making decorations for the holidays, making New Year's and Christmas decorations, and organizing an exhibition of works.

January:
- **Scientific activities:** Simple experiments, conducting basic scientific experiments to introduce children to the basics of physics, chemistry and biology.
- **Activities:** Scientific workshops, where children work in groups on different scientific projects and present their results.

February:
- **Board Games:** Strategy and Logic, learning and playing board games that develop strategic thinking and logic.

HALLO WIR SIND IDSS

- **Activities:** Tournaments in board games, organization of tournaments in chess, checkers, monopoly and other games.

March:

- **Dance and music:** Dance workshops, learning basic dance steps and choreography with different musical genres.
- **Activities:** Choreographies and dance games, preparation and performance of dance points, and organization of dance evenings.

April:

- **Environmental activities:** Recycling and environmental protection, learning about the importance of recycling, nature protection, and carrying out environmental actions.
- **Activities:** Environmental projects, such as planting trees, cleaning the school yard, and making items from recycled materials.

May:

- **Workshops:** A variety of creative workshops, including crafting, modeling, and other activities that encourage fine motor skills.
- **Activities:** Making handicrafts, making jewelry, decorations, and other items that children can take home or give away.

June:

- **Review and preparation for the final performance:** Review of all activities and achievements during the year, and selection of the best works for the final performance.
- **Activities:** Organization and staging of the performance, script preparation, decoration, and performance of the final performance in front of parents and teachers.

Grade 4

Mathematik (Mathematics)

September:

- **Basic Arithmetic:** Addition and subtraction up to 1000, introduction to multiplication and division.
- **Geometry:** Introduction to basic geometric shapes and their properties.

October:

- **Multiplication and division:** Multiplication and division with one- and two-digit numbers.
- **Measurement and units:** Measuring length, mass and volume, working with meters, grams and liters.

November:

- **Rational numbers:** Introduction to fractions, reading and writing fractions.
- **Geometric shapes:** Properties of squares, rectangles , circles and triangles.

December:

- **Word problems:** Solving real-life math problems.
- **Symmetry:** Recognizing and drawing symmetrical shapes.

January:

- **Fractions:** Comparison and operations with fractions (addition, subtraction).
- **Geometric constructions:** Using rulers and compasses to draw basic shapes.

February:

- **Decimals:** An introduction to decimal numbers, reading and writing.
- **Area and volume:** Calculating the area and volume of simple geometric shapes.

March:
- **Time:** Measuring time, working with a clock and calendar.
- **Graphs and Tables:** Reading and drawing graphs and tables.

April:
- **Money:** Working with money, calculating prices and returning change.
- **Proportionality:** Basic concepts of proportionality and proportions .

May:
- **Measurement:** Advanced measurement techniques, working with complex units.
- **Problem Solving:** Using different strategies to solve math problems.

June:
- **Revision:** Review and review of material through various activities and tests.
- **Final projects:** Presentation of final works and projects.

Deutsch (German Language)

September:
- **Dating:** Dating games and basic communication in German.
- **Grammar:** Basic grammatical structures and rules.

October:
- **Reading:** Reading short stories and texts, reading comprehension exercises.
- **Writing:** Writing simple sentences and compositions.

November:
- **Conversation:** Basic conversational skills, dialogues and conversations.
- **Vocabulary:** Expanding the vocabulary through different topics (family, school, free time).

December:
- **Culture:** Learning about German culture and customs.
- **Writing:** Writing letters and holiday cards.

January:
- **Grammar:** Advanced grammatical structures, work with verbs and adjectives.
- **Reading:** Analysis of longer texts and stories.

February:
- **Listening:** Exercises in listening and understanding conversations and stories.
- **Writing:** Writing essays on given topics.

March:
- **Conversation:** Advanced conversational skills, leading discussions.
- **Vocabulary:** Learning specific vocabulary (travel, sport, technology).

April:
- **Grammar:** Complex grammatical structures, working with complex sentences.
- **Reading:** Reading and analysis of literary works.

May:
- **Writing:** Writing essays and reports.
- **Listening:** Understanding more complex audio materials.

June:
- **Revision:** Reviewing and repeating the material through various activities.
- **Final projects:** Presentation of final works and projects.

- **Activities:** Creation of personalized projects that reflect personal values and successes.

January:

- **Goals and Planning:** Setting goals, planning and organizing time.
- **Activities:** Creating a plan for achieving goals and workshops on time management.

February:

- **Conflict Resolution:** Techniques for negotiating and resolving conflict constructively.
- **Activities:** Role plays for conflict resolution and simulation of negotiation situations.

March:

- **Health and well-being:** The basics of healthy eating and the importance of physical activity.
- **Activities:** Workshops on healthy eating and group physical activities.

April:

- **Environmental awareness:** Learning about environmental protection and sustainable development.
- **Activities:** Projects of recycling and conservation of natural resources.

May:

- **Financial Literacy:** Basics of Money Management and Budget Planning.
- **Activities:** Budgeting simulations and games about saving and spending.

June:

- **Review and reflection:** Review of achievements and reflection on learned skills.
- **Activities:** Organization of the final workshop for the presentation of achievements and learned skills.

Gesellschaftslehre (Social Sciences)

September:

- **Basic terms of social sciences:** Introduction to social sciences, key terms and concepts.
- **Activities:** Discussions and group work on the topic of society and community.

October:

- **History:** Introduction to history, important events and personalities.
- **Activities: Historical events** research projects and presentations.

November:

- **Geography:** Basics of geography, cartography and geographical features.
- **Activities:** Making maps and exploring different geographical areas.

December:

- **Culture and Traditions:** Different cultures and traditions around the world.
- **Activities:** Cultural workshops and creation of projects on the topic of different cultures.

January:

- **Economics:** Fundamentals of economics, market and trade.
- **Activities:** Simulations of economic situations and trade games.

HALLO WIR SIND IDSS

February:
- **Political Science:** Introduction to Politics, Political Systems and Institutions.
- **Activities:** Debate workshops and simulations of political processes.

March:
- **Sociology:** The study of social relationships and structures.
- **Activities:** Group discussions and research on sociological topics.

April:
- **Rights and Responsibilities:** Familiarity with civil rights and responsibilities.
- **Activities:** Workshops on children's rights and simulations of court processes.

May:
- **Globalization:** An introduction to globalization and its impact on society.
- **Activities:** Global phenomena research projects and discussions.

June:
- **Review and reflection:** Review of learned topics and reflections on social change.
- **Activities:** Organization of the final presentation and discussion on the acquired knowledge.

Kunst (Art)

September:
- **Basic drawing and painting techniques:** Getting to know the basics of drawing and painting.
- **Activities:** Drawing and painting workshops using different techniques.

October:
- **Art Styles:** An introduction to different art styles and trends.
- **Activities:** Research and reproduction of works by famous artists.

November:
- **Sculpture and modeling:** Basics of sculpture and modeling in different materials.
- **Activities:** Making sculptures from clay and other materials.

December:
- **Art and Culture:** The study of art through history and its influence on culture.
- **Activities:** Art research projects and presentations.

January:
- **Graphic Design:** Basics of Graphic Design and Digital Art.
- **Activities:** Digital design workshops and creation of graphic projects.

February:
- **Photography:** Introduction to photography and the basics of photographic techniques.
- **Activities:** Photography workshops and creation of photo projects.

March:
- **Art and Nature:** Inspiration from nature in artistic expression.
- **Activities:** Outdoor workshops and creation of works of art inspired by nature.

April:
- **Multimedia and Installations:** An Introduction to Multimedia Art and Installations.
- **Activities:** Creation of multimedia projects and art installations.

May:
- **Applied Art:** Fundamentals of Applied Art and Design.
- **Activities:** Applied art workshops and making functional art objects.

June:

HALLO WIR SIND IDSS

- **Review and Reflection:** Review of achievements and reflection on artistic development.
- **Activities:** Organization of the final exhibition of works and presentation of acquired skills.

Sport (Physical and Health Culture)

September:
- **Basic physical activities:** Introduction to basic physical activities and proper execution of exercises.
- **Activities:** Games and exercises to develop motor skills.

October:
- **Team sports:** Introduction to team sports and basic rules.
- **Activities:** Games and tournaments in team sports.

November:
- **Athletics:** Basics of athletic disciplines and techniques.
- **Activities:** Training and competitions in athletic disciplines.

December:
- **Winter sports:** Introduction to winter sports and techniques.
- **Activities:** Games and exercises adapted to winter sports.

January:
- **Fitness and Health:** The Basics of Fitness and a Healthy Lifestyle.
- **Activities:** Fitness workshops and health maintenance exercises .

February:
- **Individual sports:** Introduction to individual sports and techniques.
- **Activities:** Training and competitions in individual sports.

March:
- **Dance and rhythmic activities:** Introduction to dance and rhythmic activities.
- **Activities:** Dance and rhythmic dance workshops.

April:
- **Environmental sports:** Outdoor activities and sports in nature.
- **Activities:** Hiking , cycling and other outdoor activities.

May:
- **Water sports:** Introduction to water sports and safety measures.
- **Activities:** Games and exercises adapted to water sports.

June:
- **Review and reflection:** Review of achievements and reflection on physical development.
- **Activities:** Organization of the final sports competition and presentation of acquired skills.

Musik (Music Culture)

September:
- **Basic concepts of music:** Introduction to basic musical concepts and instruments.
- **Activities:** Workshops on playing different instruments.

October:
- **History of Music:** The study of the development of music through history.
- **Activities:** Research and presentation of works by famous composers.

November:

HALLO WIR SIND IDSS

- **Music Theory:** Basics of Music Theory and Notation.
- **Activities:** Exercises in reading notes and writing musical compositions.

December:
- **Vocal Techniques:** Introduction to vocal techniques and singing.
- **Activities:** Singing workshops and preparation for performances.

January:
- **Musical Genres:** Study of different musical genres.
- **Activities:** Research and performance of compositions from different genres.

February:
- **Composition:** Basics of composing music.
- **Activities:** Composition workshops and creation of own musical works.

March:
- **Rhythm and Percussion:** An Introduction to Rhythm and Percussion Instruments.
- **Activities:** Percussion and rhythmic dance workshops.

April:
- **Music Technology:** An Introduction to Music Technology and Production.
- **Activities:** Music production and recording workshops.

May:
- **Musical ensembles:** An introduction to musical ensembles and orchestras.
- **Activities:** Ensemble exercises and preparation for joint performances.

June:
- **Review and reflection:** Review of achievements and reflection on musical development.
- **Activities:** Organization of the final concert and presentation of acquired skills.

Nachmittingsprogramm (Afternoon Program)

September:
- **Dating and socializing:** Dating games.
- **Activities:** Creative workshops.

October:
- **Reading and writing:** Literary workshops.
- **Activities:** Written creativity.

November:
- **Sports and recreation:** Outdoor games.
- **Activities:** Sports competition games.

December:
- **Artistic activities:** Art workshops.
- **Activities:** Making holiday decorations.

January:
- **Science activities:** Simple experiments.
- **Activities:** Scientific workshops.

February:
- **Board Games:** Strategy and Logic.
- **Activities:** Tournaments in board games.

March:
- **Dance and music:** Dance workshops.
- **Activities:** Choreographies and dance games.

April:
- **Environmental activities:** Recycling and environmental protection.

HALLO WIR SIND IDSS

- **Activities:** Ecological projects.

May:

- **Workshops:** Various creative workshops.
- **Activities:** Making handicrafts.

June:

- **Review and preparation for the final performance.**
- **Activities:** Organization and staging of the event.

Grade 6

Mathematik (Mathematics)

September:

- **Basic concepts:** Introduction to arithmetic and basic mathematical operations.
- **Activities:** Workshops to repeat basic operations and games to develop mathematical skills.

October:

- **Whole Numbers:** Working with whole numbers, addition, subtraction, multiplication and division.
- **Activities:** Tasks to practice operations with whole numbers and group work on mathematical problems.

November:

- **Fractions:** Introduction to fractions, basic operations with fractions.
- **Activities: Fraction** manipulation workshops and games for better understanding of fractions.

December:

- **Decimals:** Working with decimal numbers, addition, subtraction, multiplication and division of decimal numbers.
- **Activities:** Practicing operations with decimal numbers through tasks and games.

January:

- **Measures:** Introduction to measures of length, mass and volume.
- **Activities:** Practical measurement exercises and tasks for converting between different units of measurement.

February:

- **Geometry:** Introduction to basic geometric shapes and their properties.
- **Activities:** Workshops on drawing and measuring geometric shapes.

March:

- **Area and volume:** Calculation of the area and volume of basic geometric bodies.
- **Activities:** Tasks for practicing calculation of area and volume and practical exercises.

April:

- **Proportions and Percents:** An Introduction to Proportions and Percent Calculus.
- **Activities:** Workshops to understand proportions and percent calculations through practical examples.

May:

- **Statistics:** Basic concepts of statistics, data collection and analysis.
- **Activities:** Data collection projects and creation of statistical graphics.

June:

- **Review and preparation for the final exam:** Review of learned topics and preparation for the final exam.
- **Activities:** Organization of workshops for repetition and exam simulations.

Deutsch (German Language)

September:
- **Getting to know and basic terms:** Introduction to basic terms and phrases in the German language.
- **Activities: Familiarity games and simple conversations in German.**

October:
- **Grammar: Basics of German grammar, verbs and nouns.**
- **Activities: Verb conjugation and noun declension exercises through tasks and games.**

November:
- **Reading and comprehension: Working on the skills of reading and understanding texts.**
- **Activities: Reading short stories and discussing the reading.**

December:
- **Writing: An introduction to writing short texts and letters in German.**
- **Activities: Writing short compositions and letters, practicing spelling and grammar.**

January:
- **Listening and speaking: Developing listening and speaking skills through different activities.**
- **Activities: Listening to audio recordings and having simple conversations.**

February:
- **Culture: Getting to know German culture and customs.**
- **Activities: German culture research projects and presentations.**

March:
- **Literature: Introduction to German literature , reading and analysis of simple literary works.**
- **Activities: Reading and analysis of short literary works, group discussions.**

April:
- **Expanding vocabulary: Learning new words and phrases through different activities.**
- **Activities: Games to expand vocabulary and practice using new words in conversation.**

May:
- **Preparation for the exam: Review of learned topics and preparation for the final exam.**
- **Activities: Organization of workshops for repetition and exam simulations.**

June:
- **Review and reflection: Review of achievements and reflection on learned skills.**
- **Activities: Organization of the final workshop for the presentation of achievements and learned skills.**

Englisch (English)

September:
- **Getting to know and basic terms: An introduction to basic terms and phrases in the English language.**

HALLO WIR SIND IDSS

- **Activities: Dating games and simple conversations in English.**

October:

- **Grammar: Basics of English grammar, verbs and nouns.**
- **Activities: Verb conjugation and noun declension exercises through tasks and games.**

November:

- **Reading and comprehension: Working on the skills of reading and understanding texts.**
- **Activities: Reading short stories and discussing the reading.**

December:

- **Writing: An introduction to writing short texts and letters in English.**
- **Activities: Writing short compositions and letters, practicing spelling and grammar.**

January:

- **Listening and speaking: Developing listening and speaking skills through different activities.**
- **Activities: Listening to audio recordings and having simple conversations.**

February:

- **Culture: Getting to know English culture and customs.**
- **Activities: English culture research projects and presentations.**

March:

- **Literature: Introduction to English literature , reading and analysis of simple literary works.**
- **Activities: Reading and analysis of short literary works, group discussions.**

April:

- **Expanding vocabulary: Learning new words and phrases through different activities.**
- **Activities: Games to expand vocabulary and practice using new words in conversation.**

May:

- **Preparation for the exam: Review of learned topics and preparation for the final exam.**
- **Activities: Organization of workshops for repetition and exam simulations.**

June:

- **Review and reflection: Review of achievements and reflection on learned skills.**
- **Activities: Organization of the final workshop for the presentation of achievements and learned skills.**

Bosnisch (Bosnian Language)

September:

- **Getting to know and basic terms: Introduction to basic terms and grammar of the Bosnian language.**
- **Activities: Dating games and simple conversations in Bosnian.**

October:

- **Grammar: Grammar basics, verbs and nouns.**
- **Activities: Verb conjugation and noun declension exercises through tasks and games.**

November:

- **Reading and comprehension: Working on the skills of reading and understanding texts.**
- **Activities: Reading short stories and discussing the reading.**

HALLO WIR SIND IDSS

December:

- **Writing: Introduction to writing short texts and letters in the Bosnian language.**
- **Activities: Writing short compositions and letters, practicing spelling and grammar.**

January:

- **Listening and speaking: Developing listening and speaking skills through different activities.**
- **Activities: Listening to audio recordings and having simple conversations.**

February:

- **Culture: Getting to know Bosnian culture and customs.**
- **Activities: Bosnian culture research projects and presentations.**

March:

- **Literature: Introduction to Bosnian literature , reading and analysis of simple literary works.**
- **Activities: Reading and analysis of short literary works, group discussions.**

April:

- **Expanding vocabulary: Learning new words and phrases through different activities.**
- **Activities: Games to expand vocabulary and practice using new words in conversation.**

May:

- **Preparation for the exam: Review of learned topics and preparation for the final exam.**
- **Activities: Organization of workshops for repetition and exam simulations.**

June:

- **Review and reflection: Review of achievements and reflection on learned skills.**
- **Activities: Organization of the final workshop for the presentation of achievements and learned skills.**

Biologie (Biology)

September:

- **Basic concepts of biology: Introduction to biology, basic characteristics of living things.**
- **Activities: Workshops for the identification and classification of organisms.**

October:

- **Cell: Cell structure and function, basic cell types.**
- **Activities: Microscopic examinations of cells and creation of cell models.**

November:

- **Tissues and organs: Introduction to tissues and organs, functions of different organ systems.**
- **Activities: Research projects and presentations on different organs and tissues.**

December:

- **Organ Systems: An overview of different organ systems and their functions.**
- **Activities: Workshops for the study of organ systems and practical exercises.**

January:

- **Genetics: Fundamentals of genetics, inheritance and DNA.**
- **Activities: Exercises for understanding inheritance and making DNA models.**

February:

- **Ecology: Basic concepts of ecology, interactions between organisms and the environment.**
- **Activities: Ecosystem research projects and presentations.**

March:

- **Evolution: Theory of evolution, natural selection and adaptations.**
- **Activities: Research and discussions on the evolution and adaptation of organisms.**

April:

- **Biodiversity: The variety of living things and the importance of conservation biodiversity .**
- **Activities: Research of biodiversity and making posters.**

May:

- **Biotechnology: Introduction to biotechnology and its applications.**
- **Activities: Workshops on biotechnological processes and their application.**

June:

- **Review and reflection: Review of achievements and reflection on learned skills.**
- **Activities: Organization of the final workshop for the presentation of achievements and learned skills.**

Geschichte (History)

September:

- **The Basics of History: An Introduction to Historical Methods and Basic Concepts.**
- **Activities: Discussions and group work on the topic of historical methods and sources.**

October:

- **Ancient Civilization: The study of ancient civilizations and their influence on today's world.**
- **Activities: Research projects of ancient civilizations and presentations.**

November:

- **The Middle Ages: An overview of medieval history and important events.**
- **Activities: Research and analysis of medieval events and characters.**

December:

- **The Early Modern Era: A Survey of Events and Changes in the Early Modern Era.**
- **Activities: Research projects and discussions on the early modern era.**

January:

- **Industrial Revolution: The impact of the industrial revolution on society and the economy.**
- **Activities: Research and analysis of the industrial revolution and its consequences.**

February:

- **World Wars: An Overview of the Causes, Events, and Consequences of the World Wars.**
- **Activities: Research projects and presentations on world wars.**

March:

- **The Cold War: A Study of the Cold War and Its Impact on the World.**
- **Activities: Discussions and research on the Cold War and its events.**

April:

- **Contemporary History: Study of contemporary history and important events.**
- **Activities: Research and analysis of contemporary historical events.**

May:

- **Culture and Society: The Impact of Historical Events on Culture and Society.**
- **Activities: Research projects on cultural changes and social phenomena.**

June:

- **Review and reflection: Review of achievements and reflection on learned skills.**

HALLO WIR SIND IDSS

- **Activities: Organization of the final workshop for the presentation of achievements and learned skills.**

Erdkunde (Geography)

September:
- **Basic concepts of geography: Introduction to geography, basic concepts and cartography.**
- **Activities: Creation of maps and research projects of geographical areas.**

October:
- **Physical Geography: The study of Earth's physical features, relief and climate.**
- **Activities: Research and analysis of relief and climate zones.**

November:
- **Human Geography: Introduction to Human Geography, Demography and Urban Geography.**
- **Activities: Research projects on demographic data and urban areas.**

December:
- **Resources and the Environment: The study of natural resources and their impact on the environment.**
- **Activities: Research and analysis of the use of natural resources and environmental problems.**

January:
- **Globalization: Impact of globalization on geography and society.**
- **Activities: Globalization phenomena research projects and discussions.**

February:
- **Geographic technologies: Introduction to geographic information systems (GIS) and satellite imagery.**
- **Activities: Workshops on the use of GIS and analysis of satellite images.**

March:
- **Regional Geography: The study of the geographical features of different regions of the world.**
- **Activities: Research projects of different regions and presentations.**

April:
- **Environmental Geography: The Study of Environmental Issues and Sustainable Development.**
- **Activities: Research and analysis of environmental problems and solutions.**

May:
- **Geopolitics: The influence of geography on political relations and conflicts.**
- **Activities: Discussions and research on geopolitics and international relations.**

June:
- **Review and reflection: Review of achievements and reflection on learned skills.**
- **Activities: Organization of the final workshop for the presentation of achievements and learned skills.**

Französisch (French Language)

September:
- **Introduction to French: Basic phrases, introduction to the alphabet and numbers.**
- **Activities: Games for learning new words, singing songs in French.**

October:

HALLO WIR SIND IDSS

- Grammar: Simple sentences, basic verb forms.
- Activities: Work in pairs, conversation exercises.

November:
- Vocabulary: Words related to school and everyday activities.
- Activities: Quizzes, memory games.

December:
- Culture: Getting to know French customs and holidays.
- Activities: Making Christmas cards and decorations, singing Christmas carols.

January:
- Reading: Simple texts and stories in French.
- Activities: Reading aloud, discussions about what has been read.

February:
- Writing: Writing short compositions and letters.
- Activities: Writing letters to friends, making short compositions.

March:
- Conversation: Developing communication skills through thematic conversations.
- Activities: Debate activities, conversation simulations.

April:
- Listening: Comprehension by listening to simple dialogues and stories.
- Activities: Listening to songs and stories, working with audio materials.

May:
- Revision: Repetition of learned material through games and quizzes.
- Activities: Quizzes, role plays.

June:
- Final projects: Preparation of presentations and projects in French.
- Activities: Presentations, creation of posters and projects.

Ethik (Ethics)

September:
- Introduction to ethics: Basic concepts and importance of ethics.
- Activities: Discussions on moral dilemmas, role plays.

October:
- Human rights: Getting to know basic human rights.
- Activities: Workshops, making posters about human rights.

November:
- Empathy: Understanding other people's feelings.
- Activities: Role playing, group discussions.

December:
- Ethics in everyday life: Application of ethical principles in everyday situations.
- Activities: Analysis of situations, discussions.

January:
- Tolerance: The importance of respecting diversity.
- Activities: Workshops on tolerance, group work.

February:
- Responsibility: Understanding responsibility towards self and others.
- Activities: Group projects, discussions.

March:
- Equity: The concept of fairness and equality.
- Activities: Discussions, case analysis.

HALLO WIR SIND IDSS

April:
- **Moral values: Identification and respect of moral values.**
- **Activities: Workshops, role-playing games.**

May:
- **Revision: Repetition of key terms and principles of ethics.**
- **Activities: Quizzes, group activities.**

June:
- **Final projects: Preparation and presentation of ethical projects.**
- **Activities: Presentations, group work.**

Informatik (Informatics)

September:
- **Basics of computer science: Introduction to basic concepts and use of computers.**
- **Activities: Typing exercises, basic computer functions.**

October:
- **Software and Hardware: Familiarity with different parts of a computer and software.**
- **Activities: Identification of computer parts, software installation exercises.**

November:
- **Internet and Security: The Basics of Using the Internet Safely.**
- **Activities: Creating security settings, discussions about Internet security.**

December:
- **Programming: An introduction to basic programming concepts.**
- **Activities: Writing simple programs, using educational platforms.**

January:
- **Multimedia: Work with images, sound and video materials.**
- **Activities: Creation of multimedia projects, basic image and video processing.**

February:
- **Word processors: Using word processing programs.**
- **Activities: Writing and formatting documents, making presentations.**

March:
- **Tables and graphs: Working with tables and graphs in calculation programs.**
- **Activities: Creation of tables, data analysis.**

April:
- **Presentations: Creation and presentation of multimedia projects.**
- **Activities: Making presentations, presentation exercises.**

May:
- **Revision: Repetition of learned material through practical tasks.**
- **Activities: Quizzes, practical tasks.**

June:
- **Final projects: Preparation and presentation of IT projects.**
- **Activities: Presentations, group work.**

Technische Erziehung (Technical Education)

September:
- **Introduction to technical education: Basic concepts and tools.**
- **Activities: Introduction to tools, basic exercises.**

October:
- **Materials: Getting to know different materials and their properties.**

HALLO WIR SIND IDSS

- **Activities: Working with different materials, experimentation.**

November:

- **Constructions: Basic principles of construction and design.**
- **Activities: Making simple constructions, designing.**

December:

- **Electronics: Fundamentals of electronics and electrical circuits.**
- **Activities: Making simple electric circuits, experimenting.**

January:

- **Mechanics: Basic principles of mechanics.**
- **Activities: Making simple mechanical devices, experimentation.**

February:

- **Technical drawing: Basics of technical drawing and sketching.**
- **Activities: Drawing technical sketches, making plans.**

March:

- **Projects: Planning and development of technical projects.**
- **Activities: Group projects, work on more complex tasks.**

April:

- **Ecology and technology: Application of technical knowledge in environmental protection.**
- **Activities: Ecological projects, recycling.**

May:

- **Revision: Repetition of learned material through practical tasks.**
- **Activities: Quizzes, practical tasks.**

June:

- **Final projects: Preparation and presentation of technical projects.**
- **Activities: Presentations, group work.**

Kunst (Art)

September:

- **Introduction to art culture: Basic terms and techniques.**
- **Activities: Drawing and painting with basic techniques.**

October:

- **Colors and shapes: Exploring colors and shapes.**
- **Activities: Mixing colors, drawing different shapes.**

November:

- **Graphics: Basics of Graphic Design.**
- **Activities: Making graphic works, using different techniques.**

December:

- **Sculpture: An Introduction to Three-Dimensional Design.**
- **Activities: Making sculptures from different materials.**

January:

- **Photography: The Basics of Photographic Art.**
- **Activities: Photography and photo processing.**

February:

- **Art throughout history: An overview of the different periods of art.**
- **Activities: Analysis of works of art, creation of replicas.**

March:

- **Modern artists: Getting to know contemporary artists and their work.**
- **Activities: Analysis of works, creation of own works of art.**

HALLO WIR SIND IDSS

April:
- **Applied Art: The application of art in everyday life.**
- **Activities: Making decorative items, design.**

May:
- **Revision: Repetition of learned material through practical tasks.**
- **Activities: Quizzes, practical tasks.**

June:
- **Final projects: Preparation and presentation of artwork.**
- **Activities: Exhibition of works, group projects.**

Sport (Physical and Health Culture)

September:
- **Basic movements: Introduction to basic movements and exercises.**
- **Activities: Stretching exercises, basic gymnastic movements.**

October:
- **Athletics: Introduction to basic athletic disciplines.**
- **Activities: Running, jumping, throwing.**

November:
- **Team Sports: An Introduction to Team Sports.**
- **Activities: Playing football, basketball, volleyball.**

December:
- **Gymnastics: Basics of gymnastics.**
- **Activities: Exercises on equipment, acrobatic exercises.**

January:
- **Swimming: Basics of swimming.**
- **Activities: Swimming techniques, water games.**

February:
- **Winter sports: Introduction to winter sports.**
- **Activities: Skating, skiing (if possible).**

March:
- **Fitness: The Basics of Fitness and Exercise.**
- **Activities: Circuit training, aerobics.**

April:
- **Games: Various sports games and competitions.**
- **Activities: Organization of sports games and competitions.**

May:
- **Revision: Repetition of learned sports skills.**
- **Activities: Sports quizzes, games.**

June:
- **Final activities: Preparation for final sports competitions.**
- **Activities: Organization of sports competitions, games.**

Musik (Music Culture)

September:
- **Basic terms: Introduction to basic musical terms and notes.**
- **Activities: Singing simple songs, playing basic rhythms.**

October:
- **Instruments: Introduction to different musical instruments.**

HALLO WIR SIND IDSS

- **Activities: Playing different instruments, workshops.**

November:
- **Rhythm and melody: Basics of rhythm and melody.**
- **Activities: Rhythm exercises, composing simple melodies.**

December:
- **Holiday Songs: Learning and performing holiday songs.**
- **Activities: Singing Christmas carols, preparing for performances.**

January:
- **Music History: An overview of different periods of music history.**
- **Activities: Listening and analyzing musical works from different periods.**

February:
- **Composition: Basics of composing music.**
- **Activities: Composing simple songs, working in groups.**

March:
- **Culture and music: The role of music in different cultures.**
- **Activities: Listening to musical works from different cultures, discussions.**

April:
- **Contemporary musicians: Getting to know contemporary musicians and their work.**
- **Activities: Analysis of contemporary musical works, discussions.**

May:
- **Revision: Repetition of learned material through practical tasks.**
- **Activities: Quizzes, singing and playing.**

June:
- **Final projects: Preparation and presentation of musical projects.**
- **Activities: Concerts, group work.**

Nachmittingsprogramm (Afternoon Program)

September:
- **Dating and socializing: Dating games.**
- **Activities: Creative workshops.**

October:
- **Reading and writing: Literary workshops.**
- **Activities: Written creativity.**

November:
- **Sports and recreation: Outdoor games.**
- **Activities: Sports competition games.**

December:
- **Artistic activities: Art workshops.**
- **Activities: Making holiday decorations.**

January:
- **Science activities: Simple experiments.**
- **Activities: Scientific workshops.**

February:
- **Board Games: Strategy and Logic.**
- **Activities: Tournaments in board games.**

March:
- **Dance and music: Dance workshops.**
- **Activities: Choreographies and dance games.**

April:

HALLO WIR SIND IDSS

- **Environmental activities: Recycling and environmental protection.**
- **Activities: Ecological projects.**

May:

- **Workshops: Various creative workshops.**
- **Activities: Making handicrafts.**

June:

- **Review and preparation for the final performance.**
- **Activities: Organization and staging of the event.**

Grade 7

Mathematik (Mathematics)

September:

- **Introduction to mathematics: Basic mathematical concepts, review of material from previous classes.**
- **Activities: Exercises with basic operations (addition, subtraction, multiplication , division), number games, knowledge test quizzes.**

October:

- **Numbers and operations: Natural numbers, integers, rational numbers.**
- **Activities: Number problems, pair work, group activities, knowledge test quizzes.**

November:

- **Fractions: Basic operations with fractions, converting fractions to decimals and vice versa.**
- **Activities: Exercises with fractions, games for learning fractions, quizzes to test knowledge.**

December:

- **Percentages: Basic concepts about percentages, calculating percentages from a number.**
- **Activities: Problems with percentages, practical exercises, quizzes to check knowledge.**

January:

- **Equations and inequalities: Basic linear equations and inequalities.**
- **Activities: Solving equations and inequalities, group work, quizzes to test knowledge.**

February:

- **Geometry: Basic geometric concepts, drawing geometric shapes.**
- **Activities: Exercises with geometric shapes, practical activities, quizzes to test knowledge.**

March:

- **Area and volume: Calculation of areas and volumes of basic geometric bodies.**
- **Activities: Practical exercises, work in groups, quizzes to test knowledge.**

April:

- **Statistics: Basic statistical terms, data collection and analysis.**
- **Activities: Creating statistical charts, group work, quizzes to test knowledge.**

May:

- **Revision: Repetition of material from the entire school year through practical tasks.**
- **Activities: Quizzes, group activities, problem solving.**

June:

- **Final projects: Preparation and presentation of mathematical projects.**
- **Activities: Presentations, group work, organization of mathematical competitions.**

HALLO WIR SIND IDSS

Deutsch (German Language)

September:
- **Introduction to the German language: Basic phrases, alphabet, numbers.**
- **Activities: Games for learning new words, singing songs in German, quizzes to test knowledge.**

October:
- **Grammar: Simple sentences, basic verb forms, verb tenses.**
- **Activities: Work in pairs, conversational exercises, quizzes to test knowledge.**

November:
- **Vocabulary: Words related to school and daily activities, vocabulary expansion.**
- **Activities: Quizzes, memory games, written assignments.**

December:
- **Culture: Getting to know German customs and holidays, cultural heritage.**
- **Activities: Making Christmas cards and decorations, singing Christmas carols, quizzes to test knowledge.**

January:
- **Reading: Simple texts and stories in German, text analysis.**
- **Activities: Reading aloud, discussions about reading, quizzes to check knowledge.**

February:
- **Writing: Writing short compositions and letters, spelling and grammar.**
- **Activities: Writing letters to friends, creating short essays, quizzes to test knowledge.**

March:
- **Conversation: Developing communication skills through thematic conversations, dialogues.**
- **Activities: Debate activities, conversation simulations, knowledge test quizzes.**

April:
- **Listening: Comprehension by listening to simple dialogues and stories, listening exercises.**
- **Activities: Listening to songs and stories, working with audio materials, quizzes to check knowledge.**

May:
- **Revision: Repetition of learned material through games and quizzes, review of key terms.**
- **Activities: Quizzes, role plays, group activities.**

June:
- **Final projects: Preparation of presentations and projects in German, evaluation .**
- **Activities: Presentations, creation of posters and projects, quizzes to test knowledge.**

Englisch (English)

September:
- **Introduction to English: Basic phrases, alphabet, numbers.**
- **Activities: Games for learning new words, singing songs in English, quizzes to test knowledge.**

October:
- **Grammar: Simple sentences, basic verb forms, verb tenses.**
- **Activities: Work in pairs, conversational exercises, quizzes to test knowledge.**

November:

HALLO WIR SIND IDSS

- **Culture: Getting to know English customs and holidays, cultural heritage.**
- **Activities: Making Christmas cards and decorations, singing Christmas carols, quizzes to test knowledge.**

January:

- **Reading: Simple texts and stories in English, text analysis.**
- **Activities: Reading aloud, discussions about reading, quizzes to check knowledge.**

February:

- **Writing: Writing short compositions and letters, spelling and grammar.**
- **Activities: Writing letters to friends, creating short essays, quizzes to test knowledge.**

March:

- **Conversation: Developing communication skills through thematic conversations, dialogues.**
- **Activities: Debate activities, conversation simulations, knowledge test quizzes.**

April:

- **Listening: Comprehension by listening to simple dialogues and stories, listening exercises.**
- **Activities: Listening to songs and stories, working with audio materials, quizzes to check knowledge.**

May:

- **Revision: Repetition of learned material through games and quizzes, review of key terms.**
- **Activities: Quizzes, role plays, group activities.**

June:

- **Final projects: Preparation of presentations and projects in English, evaluation .**
- **Activities: Presentations, creation of posters and projects, quizzes to test knowledge.**

Bosnisch (Bosnian Language)

September:

- **Introduction to the Bosnian language: Basic phrases, alphabet, numbers.**
- **Activities: Games for learning new words, singing songs in Bosnian, quizzes to test knowledge.**

October:

- **Grammar: Simple sentences, basic verb forms, verb tenses.**
- **Activities: Work in pairs, conversational exercises, quizzes to test knowledge.**

November:

- **Vocabulary: Words related to school and daily activities, vocabulary expansion.**
- **Activities: Quizzes, memory games, written assignments.**

December:

- **Culture: Getting to know Bosnian customs and holidays, cultural heritage.**
- **Activities: Making Christmas cards and decorations, singing Christmas carols, quizzes to test knowledge.**

January:

- **Reading: Simple texts and stories in Bosnian, text analysis.**
- **Activities: Reading aloud, discussions about reading, quizzes to check knowledge.**

February:

- **Writing: Writing short compositions and letters, spelling and grammar.**

HALLO WIR SIND IDSS

- **Activities: Writing letters to friends, writing short essays, quizzes to test knowledge.**

March:

- **Conversation: Developing communication skills through thematic conversations, dialogues.**
- **Activities: Debate activities, conversation simulations, knowledge test quizzes.**

April:

- **Listening: Comprehension by listening to simple dialogues and stories, listening exercises.**
- **Activities: Listening to songs and stories, working with audio materials, quizzes to check knowledge.**

May:

- **Revision: Repetition of learned material through games and quizzes, review of key terms.**
- **Activities: Quizzes, role plays, group activities.**

June:

- **Final projects: Preparation of presentations and projects in the Bosnian language, evaluation .**
- **Activities: Presentations, creation of posters and projects, quizzes to test knowledge.**

Biologie (Biology)

September:

- **Introduction to Biology: Basic Concepts, Introduction to Life Science.**
- **Activities: Discussions on basic concepts, work with a microscope, quizzes to test knowledge.**

October:

- **Cell: Structure and function of the cell, basic cell organelles .**
- **Activities: Practical exercises with a microscope, cell drawing, quizzes to test knowledge.**

November:

- **Tissues and organs: Types of tissues, structure and function of organs.**
- **Activities: Examination of tissue under a microscope, work in groups, quizzes to test knowledge.**

December:

- **Organ systems: Overview of basic organ systems (nervous, circulatory, respiratory).**
- **Activities: Discussions on system functions, creation of organ models, knowledge test quizzes.**

January:

- **Genetics: Basic principles of genetics, inheritance of traits.**
- **Activities: Work on genetic tasks, inheritance simulations, knowledge test quizzes.**

February:

- **Evolution: Basic concepts of evolution, theory of the origin of species.**
- **Activities: Discussions on evolution, analysis of fossils, quizzes to test knowledge.**

March:

- **Ecology: Basic ecological concepts, relationships between organisms.**
- **Activities: Ecosystem discussions, fieldwork, quizzes to test knowledge.**

April:

- **Biodiversity: Importance of biodiversity , conservation of species.**
- **Activities: Creating posters about biodiversity , working in groups, quizzes to test knowledge.**

HALLO WIR SIND IDSS

May:
- **Revision: Repetition of learned material through practical tasks.**
- **Activities: Quizzes, group activities, problem solving.**

June:
- **Final projects: Preparation and presentation of biological projects.**
- **Activities: Presentations, group work, organization of biological competitions.**

Physik (Physics)

September:
- **Introduction to physics: Basic concepts, introduction to the science of matter and energy.**
- **Activities: Discussions on basic concepts, simple experiments, quizzes to test knowledge.**

October:
- **Mechanics: Basic concepts of mechanics, movement, force and energy.**
- **Activities: Practical exercises with body movement, simulations, quizzes to test knowledge.**

November:
- **Thermodynamics: Basic concepts of thermodynamics, heat and temperature.**
- **Activities: Experiments with heat, discussions, quizzes to test knowledge.**

December:
- **Optics: Basic concepts of optics, light and its properties.**
- **Activities: Experiments with light, work with lenses, quizzes to test knowledge.**

January:
- **Electromagnetism: Basic concepts of electromagnetism, electric current and magnetic fields.**
- **Activities: Experiments with electricity and magnetism , work in groups, quizzes to test knowledge.**

February:
- **Sound: Basic concepts of sound, waves and frequency.**
- **Activities: Experiments with sound, analysis of sound waves, quizzes to test knowledge.**

March:
- **Atomic physics: Basic concepts of atomic physics, structure of atoms.**
- **Activities: Discussions about the atom, working with models, quizzes to test knowledge.**

April:
- **Nuclear physics: Basic concepts of nuclear physics, radioactivity.**
- **Activities: Discussions on nuclear energy, analysis of materials, quizzes to test knowledge.**

May:
- **Revision: Repetition of learned material through practical tasks.**
- **Activities: Quizzes, group activities, problem solving.**

June:
- **Final projects: Preparation and presentation of physical projects.**
- **Activities: Presentations, group work, organization of physical competitions.**

HALLO WIR SIND IDSS

Geschichte (History)

September:
- **Introduction to history: Basic concepts and methods of history research .**
- **Ancient civilization: Old Egypt.**

October:
- **Greek Civilization: Political System and Culture.**
- **Greco-Persian Wars: Causes and Consequences.**

November:
- **Roman Civilization: The Founding of Rome and the Roman Republic.**
- **The Roman Empire: Expansion and Administration.**

December:
- **The Middle Ages: Feudalism and Everyday Life.**
- **The Crusades: Causes, Course and Consequences.**

January:
- **Ottoman Empire: Foundation and Expansion.**
- **The Renaissance: Art and Science.**

February:
- **The Reformation and the Counter-Reformation: Religious Conflicts and Consequences.**
- **Great geographical discoveries: Travels and discoveries .**

March:
- **Industrial Revolution: Changes in Society and Economy.**
- **The French Revolution: Causes, Course and Consequences.**

April:
- **Napoleon's War Campaigns: Expansion and Decline.**
- **XIX century: National movements and the creation of states.**

May:
- **The First World War: Causes, Course and Consequences.**
- **Interwar period: Political and social changes.**

June:
- **World War II: Major Events and Consequences.**
- **The Cold War: Conflict and Decolonization.**

Erdkunde (Geography)

September:
- **Introduction to Geography: Basics of Cartography.**
- **Physical geography: Geological structures.**

October:
- **Climatology: Types of climate and their effects.**
- **Hydrology: Rivers, lakes and seas.**

November:
- **Vegetation cover: Types of plant life.**
- **Human Geography: Settlements and Urbanization.**

December:
- **Resources: Natural resources and their use.**
- **Ecology: Nature protection and sustainable development.**

January:
- **Continents: Geographical features.**

HALLO WIR SIND IDSS

- **Regional geography: Europe.**

February:

- **Regional geography: Asia.**
- **Regional Geography: Africa.**

March:

- **Regional Geography: North America.**
- **Regional Geography: South America.**

April:

- **Regional Geography: Australia and Oceania .**
- **Regional geography: Antarctica.**

May:

- **Globalization: Economic and Cultural Impacts.**
- **Geopolitics: Conflicts and Cooperation.**

June:

- **Climate Change: Causes and Consequences.**
- **Ecological projects: Practical activities.**

Französisch (French Language)

September:

- **Introduction to French: Basic Expressions and Phrases.**
- **Alphabet and numbers: Pronunciation and writing.**

October:

- **Grammar: Verbs in the present tense.**
- **Vocabulary: Family and friends.**

November:

- **Grammar: Adjectives and adverbs .**
- **Vocabulary: School and subjects.**

December:

- **Communication: Basic dialogues.**
- **Culture: French holidays and traditions.**

January:

- **Grammar: Verbs in the past tense.**
- **Vocabulary: Food and drink.**

February:

- **Grammar: Future Tense.**
- **Vocabulary: Travel and transport.**

March:

- **Communication: Writing short texts.**
- **Culture: French music and film.**

April:

- **Grammar: Complex sentence forms.**
- **Vocabulary: Nature and environment.**

May:

- **Communication: Conversations about everyday topics.**
- **Culture: French Literature .**

June:

- **Review and review: Basic language structures.**
- **Culture: French customs and lifestyle.**

HALLO WIR SIND IDSS

Ethik (Ethics)

September:
- **Basic concepts of ethics: Good and evil.**
- **Moral values: Honesty and justice.**

October:
- **Ethics in everyday life: Family and friends.**
- **Ethical Dilemma: Considerations and Solutions.**

November:
- **Respect and tolerance: Differences between people.**
- **Empathy: Understanding and compassion.**

December:
- **Responsibility: Personal and social responsibility.**
- **Solidarity: Helping and supporting others.**

January:
- **Rights and duties: Human rights.**
- **Ethics in Technology: The Digital World and Ethics.**

February:
- **Ecological ethics: Protection of nature.**
- **Ethics and religion: Religious values.**

March:
- **Social Justice: Fighting Discrimination.**
- **Ethics in Science: Scientific Research and Morality.**

April:
- **Global Ethics: International Cooperation and Peace.**
- **Ethics in business: Business morals and ethics.**

May:
- **Ethics in the media: Responsible reporting.**
- **Social ethics: Caring for vulnerable groups.**

June:
- **Review and Review: Basic Ethical Concepts.**
- **Ethics in everyday life: Examples from practice.**

Informatik (Informatics)

September:
- **Introduction to computer science: Basic terms.**
- **Computer system: Hardware and software.**

October:
- **Operating systems: Functions and usage.**
- **Core networks: Types and uses.**

November:
- **Programming: Basics of programming.**
- **Algorithms: Creation and Application.**

December:
- **Databases: Organization and use.**
- **The Internet: Security and Privacy.**

January:
- **Multimedia: Content creation and processing.**
- **Digital communication: E-mail and social networks.**

HALLO WIR SIND IDSS

February:
- **Informatics in science: Application of technology.**
- **Robotics: An Introduction and Basic Concepts.**

March:
- **Software tools: Using applications.**
- **Web Design: The Basics of Creating Web Pages.**

April:
- **Cyber Security: Data Protection.**
- **Digital Ethics: Responsible Use of Technology.**

May:
- **Project work: Development of simple applications.**
- **Presentation of projects: Presentation of works.**

June:
- **Review and Review: Key Computer Science Concepts.**
- **Practical exercises: Solving problems.**

Technische Erziehung (Technical Education)

September:
- **Introduction to technical education: Basic terms.**
- **Tools and Materials: Types and Uses.**

October:
- **Constructions: Basics of construction.**
- **Safety at work: Rules and measures.**

November:
- **Mechanics: Basic principles.**
- **Electronics: Introduction to electrical circuits.**

December:
- **Technical drawing: Creating and reading drawings.**
- **Production processes: Steps in production.**

January:
- **Energy: Types and use of energy.**
- **Transport: Technologies and Systems.**

February:
- **Automation: Basic Concepts.**
- **Robotics: Introduction and Applications.**

March:
- **Ecological technology: Sustainable development.**
- **Recycling: Processes and Significance.**

April:
- **Project work: Development of technical projects.**
- **Presentation of works: Presentation of results.**

May:
- **Innovations: Technical progress and research .**
- **Practical exercises: Technical activities.**

June:
- **Review and review: Key concepts.**
- **Final projects: Creation and presentation.**

HALLO WIR SIND IDSS

Kunst (Art)

September:
- **Introduction to art culture: Basic terms.**
- **Drawing: Basic techniques.**

October:
- **Painting: Colors and painting techniques.**
- **Graphics: Techniques and Applications.**

November:
- **Sculpture: Materials and Techniques.**
- **Applied Arts: Design and Application.**

December:
- **Art Throughout History: An Overview of Artistic Periods.**
- **Contemporary Art: Trends and Directions.**

January:
- **Art criticism: Analysis of works of art.**
- **Museums and galleries: Role and importance.**

February:
- **Photography: Techniques and composition.**
- **Digital Art: Creation and Processing.**

March:
- **Multimedia: A combination of different arts.**
- **Performance: Performing arts.**

April:
- **Project work: Creating works of art.**
- **Presentation of works: Exhibitions and displays.**

May:
- **Art therapy: Art and health.**
- **Cultural heritage: Preservation and protection.**

June:
- **Review and Review: Key Concepts of Fine Arts.**
- **Final projects: Creation and presentation.**

Sport (Physical and Health Culture)

September:
- **Introduction to physical culture: Basics of physical activity.**
- **Basic exercises: stretching and stretching.**

October:
- **Athletics: Running, jumping and throwing.**
- **Gymnastics: Basic exercises and elements.**

November:
- **Ball sports: Football, basketball, volleyball.**
- **Games: Team and individual games.**

December:
- **Winter sports: Skiing, skating.**
- **Aerobics: Fitness exercises.**

January:
- **Swimming: Techniques and styles.**
- **Sports recreation: Leisure activities.**

HALLO WIR SIND IDSS

February:
- **Martial Arts: Basics and Techniques.**
- **Mountaineering: Preparation and Safety.**

March:
- **Fitness: Exercises for strength and endurance.**
- **Health: Nutrition and hygiene.**

April:
- **Outdoor sports: Cycling, running.**
- **Ecological sports: Activities in nature.**

May:
- **Sports games: Competitions and tournaments.**
- **Teams: Team work and cooperation.**

June:
- **Review and review: Basic concepts of physical education.**
- **Final projects: Organization of sports events.**

Musik (Music Culture)

September:
- **Introduction to musical culture: Basic terms.**
- **Notes and Rhythm: Basics of Music Theory.**

October:
- **Instruments: Types and uses.**
- **Singing: Techniques and Styles.**

November:
- **Composition: Creating musical works.**
- **Conducting: Basics and Techniques.**

December:
- **Music History: An Overview of Musical Periods.**
- **Contemporary music: Trends and directions.**

January:
- **Listening to music: Analysis of musical works.**
- **Music Criticism: Writing Reviews.**

February:
- **Digital music: Creation and processing.**
- **Music Production: Recording and Mixing .**

March:
- **Multimedia: A combination of music and other arts.**
- **Musical performance: performance and presentation.**

April:
- **Project work: Creation of musical works.**
- **Presentation of works: Concerts and shows.**

May:
- **Music therapy: Music and health.**
- **Cultural heritage: Preservation and protection of musical tradition.**

June:
- **Review and review: Key concepts of musical culture.**
- **Final projects: Creation and presentation of musical works.**

HALLO WIR SIND IDSS

Nachmittingsprogramm (Afternoon Program)

September:
- **Dating and socializing: Dating games.**
- **Activities: Creative workshops.**

October:
- **Reading and writing: Literary workshops.**
- **Activities: Written creativity.**

November:
- **Sports and recreation: Outdoor games.**
- **Activities: Sports competition games.**

December:
- **Artistic activities: Art workshops.**
- **Activities: Making holiday decorations.**

January:
- **Science activities: Simple experiments.**
- **Activities: Scientific workshops.**

February:
- **Board Games: Strategy and Logic.**
- **Activities: Tournaments in board games.**

March:
- **Dance and music: Dance workshops.**
- **Activities: Choreographies and dance games.**

April:
- **Environmental activities: Recycling and environmental protection.**
- **Activities: Ecological projects.**

May:
- **Workshops: Various creative workshops.**
- **Activities: Making handicrafts.**

June:
- **Review and preparation for the final performance.**
- **Activities: Organization and staging of the event.**

Grade 8

Mathematik (Mathematics)

September:
- **Repetition of basic concepts: Repetition of key concepts from the previous year.**
- **Numbers and operations: Working with whole numbers and fractions, basic operations.**
- **Activities: Calculation exercises with whole numbers and fractions.**

October:
- **Algebra: An introduction to algebraic expressions and simple equations.**
- **Linear function: Basic concepts and graphing.**
- **Activities: Solving simple equations and graphing linear functions.**

November:
- **Geometry: Basic geometric shapes and their properties.**
- **Measurement: Area and volume of geometric bodies.**
- **Activities: Practical exercises in measuring and calculating areas and volumes.**

December:

- **Relations and functions: Basic concepts of relations and functions.**
- **System of equations: Solving systems of linear equations.**
- **Activities: Exercises in solving systems of equations and analysis of functions.**

January:

- **Polynomials: Basic concepts and operations with polynomials.**
- **Quadratic Functions: Study of quadratic functions and their graphs.**
- **Activities: Exercises with polynomials and graphing quadratic functions.**

February:

- **Statistics: Collection, presentation and analysis of data.**
- **Probability: Basic concepts of probability .**
- **Activities: Practical exercises in data collection and analysis, basic tasks in probability .**

March:

- **Trigonometry: Basic trigonometric concepts and functions.**
- **Right triangle: Application of trigonometry in a right triangle.**
- **Activities: Solving problems with right triangles using trigonometry.**

April:

- **Advanced Algebra: Complex Equations and Inequalities.**
- **Logarithms: Basic concepts and operations with logarithms.**
- **Activities: Exercises for solving complex equations and inequalities, work with logarithms.**

May:

- **Analytic geometry: Lines and circles in the plane.**
- **Conic sections: Basic terms and properties.**
- **Activities: Analysis and drawing of conic sections.**

June:

- **Review of learning: Review of key concepts and preparation for the final test.**
- **Activities: Solving tasks in all areas, preparing for the final exam.**

German language (Deutsch Language)

September:

- **Introduction to the course: Overview of course content and objectives, introduction to the teacher and students.**
- **Reading and writing: Exercises in reading and writing short texts.**
- **Activities: Dating games, writing short essays.**

October:

- **Grammar: Basic rules of grammar, verb tenses.**
- **Conversation: Conversations on everyday topics.**
- **Activities: Grammar exercises, simulations of everyday situations.**

November:

- **Reading and analysis: Reading and analysis of literary texts.**
- **Written assignments: Composition and essay writing.**
- **Activities: Discussions on the texts read, writing and analyzing essays.**

December:

- **Culture and Civilization: An Overview of German Culture and Customs.**
- **Listening: Listening and comprehension exercises.**
- **Activities: Presentations about German culture, listening exercises.**

January:

HALLO WIR SIND IDSS

- Grammar: Advanced grammar structures.
- Written assignments: Writing formal letters and reports.
- Activities: Advanced grammar exercises, writing formal texts.

February:
- Literature: Overview of the most important works of German literature.
- Discussion: Thematic discussions about the works read.
- Activities: Reading and analysis of literary works, discussions.

March:
- Conversation: Thematic conversations and debates.
- Listening: Understanding authentic audio materials.
- Activities: Debates, listening and analyzing audio material.

April:
- Written assignments: Writing narrative and descriptive texts.
- Grammar: Complex grammatical structures.
- Activities: Writing exercises, analysis of grammatical structures.

May:
- Exam preparation: Review of key concepts.
- Activities: Knowledge testing, exam preparation exercises.

June:
- Learning Review: Revisiting key concepts.
- Activities: Solving tasks, preparing for the final exam.

Englisch (English)

September:
- Introduction to the course: Overview of content and objectives, introduction to the teacher and students.
- Reading and writing: Exercises in reading and writing short texts.
- Activities: Dating games, writing short essays.

October:
- Grammar: Basic rules of grammar, verb tenses.
- Conversation: Conversations on everyday topics.
- Activities: Grammar exercises, simulations of everyday situations.

November:
- Reading and analysis: Reading and analysis of literary texts.
- Written assignments: Composition and essay writing.
- Activities: Discussions on the texts read, writing and analyzing essays.

December:
- Culture and Civilization: An Overview of English-Speaking Culture and Customs.
- Listening: Listening and comprehension exercises.
- Activities: Presentations on culture, listening exercises.

January:
- Grammar: Advanced grammar structures.
- Written assignments: Writing formal letters and reports.
- Activities: Advanced grammar exercises, writing formal texts.

February:
- Literature: An overview of the most important works of English literature.
- Discussion: Thematic discussions about the works read.
- Activities: Reading and analysis of literary works, discussions.

March:

HALLO WIR SIND IDSS

- Conversation: Thematic conversations and debates.
- Listening: Understanding authentic audio materials.
- Activities: Debates, listening and analyzing audio material.

April:

- Written assignments: Writing narrative and descriptive texts.
- Grammar: Complex grammatical structures.
- Activities: Writing exercises, analysis of grammatical structures.

May:

- Exam preparation: Review of key concepts.
- Activities: Knowledge testing, exam preparation exercises.

June:

- Learning Review: Revisiting key concepts.
- Activities: Solving tasks, preparing for the final exam.

Bosnisch (Bosnian Language)

September:

- Introduction to the course: Overview of content and objectives, introduction to the teacher and students.
- Reading and writing: Exercises in reading and writing short texts.
- Activities: Dating games, writing short essays.

October:

- Grammar: Basic rules of grammar, verb tenses.
- Conversation: Conversations on everyday topics.
- Activities: Grammar exercises, simulations of everyday situations.

November:

- Reading and analysis: Reading and analysis of literary texts.
- Written assignments: Composition and essay writing.
- Activities: Discussions on the texts read, writing and analyzing essays.

December:

- Culture and Civilization: An Overview of Bosnian Culture and Customs.
- Listening: Listening and comprehension exercises.
- Activities: Presentations on culture, listening exercises.

January:

- Grammar: Advanced grammar structures.
- Written assignments: Writing formal letters and reports.
- Activities: Advanced grammar exercises, writing formal texts.

February:

- Literature: Overview of the most important works of Bosnian literature.
- Discussion: Thematic discussions about the works read.
- Activities: Reading and analysis of literary works, discussions.

March:

- Conversation: Thematic conversations and debates.
- Listening: Understanding authentic audio materials.
- Activities: Debates, listening and analyzing audio material.

April:

- Written assignments: Writing narrative and descriptive texts.
- Grammar: Complex grammatical structures.
- Activities: Writing exercises, analysis of grammatical structures.

May:

HALLO WIR SIND IDSS

- **Exam preparation: Review of key concepts.**
- **Activities: Knowledge testing, exam preparation exercises.**

June:

- **Learning Review: Revisiting key concepts.**
- **Activities: Solving tasks, preparing for the final exam.**

Biologie (Biology)

September:

- **Introduction to Biology: Basic Concepts and Objectives of Biology.**
- **Cell: Structure and function of the cell.**
- **Activities: Microscopic examination of cells, drawing of cell structures.**

October:

- **Genetics: Basic concepts of genetics, inheritance of traits.**
- **DNA: Structure and function of DNA.**
- **Activities: Making DNA models, exercises in genetics.**

November:

- **Ecology: Basic ecological concepts, ecosystems.**
- **Biomes: Different types of biomes .**
- **Activities: Research and presentations on ecosystems and biomes .**

December:

- **Evolution: Basic concepts of evolution, theories of evolution.**
- **Natural selection: Mechanisms of natural selection.**
- **Activities: Discussions and debates on theories of evolution, simulations of natural selection.**

January:

- **Human body: Basic functions and systems of the human body.**
- **Health: Basics of health and disease prevention.**
- **Activities: Anatomy exercises, health scenario simulations.**

February:

- **Botany: Structure and function of plants.**
- **Photosynthesis: The process of photosynthesis.**
- **Activities: Making a herbarium, experiments with photosynthesis.**

March:

- **Zoology: Basic groups of animals, their structure and function.**
- **Ethology: Animal behavior .**
- **Activities: Research and presentations on different animal species, observation animal behavior .**

April:

- **Microbiology: Basic concepts of microbiology, microorganisms.**
- **Bacteria and viruses: Structure and function of bacteria and viruses.**
- **Activities: Microscopic examination of microorganisms, simulations of microbiological processes.**

May:

- **Biotechnology: Application of biology in technology.**
- **Genetic engineering: Basic concepts and applications.**
- **Activities: Discussions and debates on ethical aspects of biotechnology, simulations of genetic engineering.**

June:

- **Learning Review: Revisiting key concepts.**

HALLO WIR SIND IDSS

- **Activities: Solving tasks, preparing for the final exam.**

Physik (Physics)

September:
- **Introduction to physics: Basic concepts and goals of physics.**
- **Measurement: Basic sizes and units of measurement.**
- **Activities: Measurement exercises, experiments with basic quantities.**

October:
- **Kinematics: Basic concepts of kinematics , speed, acceleration.**
- **Newton's Laws: Basic Newton's Laws.**
- **Activities: Solving tasks from kinematics , experiments with Newton's laws.**

November:
- **Dynamics: Forces and their effects.**
- **Energy: Basic concepts of energy, kinetic and potential energy.**
- **Activities: Experiments with forces and energy, problem solving.**

December:
- **Thermodynamics: Basic concepts of thermodynamics, temperature, heat.**
- **Gas laws: Basic gas laws.**
- **Activities: Experiments with heat and gases, problem solving.**

January:
- **Optics: Basic concepts of optics, light, reflection, refraction.**
- **Lenses and mirrors: Working with lenses and mirrors.**
- **Activities: Experiments with light, solving problems in optics.**

February:
- **Electromagnetism: Basic concepts of electromagnetism, electric field, magnetic field.**
- **Current: Basic concepts of electric current, Ohm's law.**
- **Activities: Experiments with electricity and magnets, solving problems.**

March:
- **Waves: Basic concepts of waves, mechanical and electromagnetic waves.**
- **Sound: Basic concepts of sound, frequency, amplitude.**
- **Activities: Experiments with waves and sound, solving problems.**

April:
- **Atomic physics: Basic concepts of atomic physics, structure of atoms.**
- **Nuclear physics: Basic concepts of nuclear physics, radioactivity.**
- **Activities: Discussions and experiments in atomic and nuclear physics, problem solving.**

May:
- **Relativity: Basic terms of the theory of relativity.**
- **Quantum physics: Basic concepts of quantum physics.**
- **Activities: Discussions and simulations from the theory of relativity and quantum physics.**

June:
- **Learning Review: Revisiting key concepts.**
- **Activities: Solving tasks, preparing for the final exam.**
- **2.2. Contents Thematic plan for the eighth grade, by month (September - June)**

Chemie (Chemistry)

September:
- **Introduction to chemistry: Basic concepts and laboratory equipment.**
- **Activities: Demonstration of simple experiments.**

October:
- **Atomic structure: Atomic structure, protons, neutrons, electrons.**
- **Activities: Making a model of an atom.**

November:
- **Periodic table of elements: Grouping of elements and their properties.**
- **Activities: Interactive games for learning the periodic table.**

December:
- **Chemical bonds: Covalent and ionic bonds.**
- **Activities: Experiments with model molecules.**

January:
- **Reactions and equations: Types of chemical reactions.**
- **Activities: Balancing chemical equations.**

February:
- **Acids and bases: Basic properties and pH scale.**
- **Activities: Experiments with pH indicators.**

March:
- **Chemical kinetics: Rate of chemical reactions.**
- **Activities: Measuring the speed of reactions in the laboratory.**

April:
- **Thermodynamics: Energy in chemical reactions.**
- **Activities: Demonstration of exothermic and endothermic reactions.**

May:
- **Organic Chemistry: An Introduction to Organic Compounds.**
- **Activities: Creation of models of organic molecules.**

June:
- **Review and preparation for the final test.**
- **Activities: Review of key concepts and laboratory skills.**

Geschichte (History)

September:
- **Ancient civilizations: Egypt, Greece, Rome.**
- **Activities: Making presentations about ancient civilizations.**

October:
- **Middle Ages: Feudalism, Crusades.**
- **Activities: Workshop with simulation of feudal society.**

November:
- **Renaissance and Reformation: Art, Science, Religion.**
- **Activities: Analysis of Renaissance works of art.**

December:
- **Discoveries and Colonization: The Great Geographical Discoveries .**
- **Activities: Making maps showing the explorer's journey .**

January:
- **The Industrial Revolution: Changes in Production and Society.**
- **Activities: Documentary films and discussions.**

HALLO WIR SIND IDSS

February:
- **World Wars: First and Second World War.**
- **Activities: Debate on the causes and consequences of wars.**

March:
- **The Cold War: The Conflict of East and West.**
- **Activities: Making posters with key events of the Cold War.**

April:
- **The Postcolonial World: Decolonization and the New World Order.**
- **Activities: Analysis of texts on decolonization.**

May:
- **The Modern World: Globalization and Contemporary Challenges.**
- **Activities: Discussion of global problems and solutions.**

June:
- **Review and preparation for the final test.**
- **Activities: Review of key historical events and concepts.**

Erdkunde (Geography)

September:
- **Introduction to geography: Basic concepts and methods.**
- **Activities: Creation of thematic maps.**

October:
- **Physical geography: Relief, climate, water.**
- **Activities: Field research and reports.**

November:
- **Political Geography: States and Borders.**
- **Activities: Quizzes about the countries of the world.**

December:
- **Economic Geography: Resources and Industry.**
- **Activities: Case studies on different industries.**

January:
- **Demographic geography: Population, migrations.**
- **Activities: Analysis of demographic data.**

February:
- **Urbanization: Cities and urbanization.**
- **Activities: Designing an ideal city.**

March:
- **Ecological Geography: Environmental Protection and Sustainable Development.**
- **Activities: Ecological projects and recycling.**

April:
- **Regional geography: Continents and regions.**
- **Activities: Presentations about different regions of the world.**

May:
- **Global challenges: Climate change, natural disasters.**
- **Activities: Workshops and discussions on global challenges.**

June:
- **Review and preparation for the final test.**
- **Activities: Repetition of key geographical terms and methods.**

Französisch (French Language)

September:
- **Introduction to French: Basic Phrases and Vocabulary.**
- **Activities: Games for learning basic phrases.**

October:
- **Grammar and spelling: Basic rules.**
- **Activities: Writing simple sentences.**

November:
- **Reading and writing: Short texts and essays.**
- **Activities: Reading and analysis of texts.**

December:
- **Conversation: Basic topics for conversation.**
- **Activities: Dialogue simulation.**

January:
- **Culture and tradition: French holidays and customs.**
- **Activities: Presentations on French culture.**

February:
- **Listening and Comprehension: Audio Materials.**
- **Activities: Listening exercises.**

March:
- **Advanced grammar: Complex grammatical forms.**
- **Activities: Exercises with complex sentences.**

April:
- **Literature: Analysis of literary works.**
- **Activities: Discussion about the books read.**

May:
- **Preparation for the exam: Repetition of what has been learned.**
- **Activities: Tests and quizzes.**

June:
- **Review and preparation for the final test.**
- **Activities: Exam simulation.**

Ethik (Ethics)

September:
- **Basic concepts of ethics: Morality, values.**
- **Activities: Discussions on moral dilemmas.**

October:
- **Philosophy and Religion: An Introduction to the Different Schools of Philosophy.**
- **Activities: Presentations about philosophers.**

November:
- **Human rights: Basic rights and freedoms.**
- **Activities: Workshop on human rights.**

December:
- **Ethics in Science: Moral Issues in Scientific Research .**
- **Activities: Case studies.**

January:
- **Ethics in everyday life: Family, friendship.**
- **Activities: Talk about everyday moral dilemmas.**

HALLO WIR SIND IDSS

February:
- **Professional ethics: Ethics in different professions.**
- **Activities: Interviews with professionals.**

March:
- **Environmental ethics: Responsibility towards the environment.**
- **Activities: Environmental actions.**

April:
- **Ethics and technology: Digital ethics.**
- **Activities: Internet security workshops.**

May:
- **Global Ethics: Globalization and Ethical Issues.**
- **Activities: Discussions on global ethical problems.**

June:
- **Review and preparation for the final test.**
- **Activities: Repetition of key ethical terms.**

Informatik (Informatics)

September:
- **Introduction to computer science: Basic terms.**
- **Activities: Computer games for learning basic concepts.**

October:
- **Programming: Basic algorithms.**
- **Activities: Writing simple programs.**

November:
- **Computer networks: Basic network technologies.**
- **Activities: Setting up a local network.**

December:
- **Internet Security: Data Protection.**
- **Activities: Security workshops.**

January:
- **Databases: An Introduction to SQL.**
- **Activities: Creating simple databases.**

February:
- **Software development: Phases of software development.**
- **Activities: Project tasks.**

March:
- **Multimedia: Sound and image processing.**
- **Activities: Creation of multimedia presentations.**

April:
- **Web Design: HTML and CSS Basics.**
- **Activities: Creating simple web pages.**

May:
- **Artificial intelligence: Basic terms.**
- **Activities: Discussions on the ethics of AI.**

June:
- **Review and preparation for the final test.**
- **Activities: Repetition of key IT terms.**

Technische Erziehung (Technical Education)

September:
- **Introduction to Technical Education: Basic Tools and Materials.**
- **Activities: Workshops to familiarize yourself with the tools.**

October:
- **Mechanics: Basic concepts of mechanics.**
- **Activities: Making simple mechanical devices.**

November:
- **Electronics: Basic electronic circuits.**
- **Activities: Assembly of electronic components.**

December:
- **Robotics: Fundamentals of Robotics.**
- **Activities: Programming small robots.**

January:
- **Energy: Renewable energy sources.**
- **Activities: Projects on renewable energy sources.**

February:
- **Technical drawing: Basics of technical drawing.**
- **Activities: Drawing technical drawings.**

March:
- **Production processes: Production stages .**
- **Activities: Visit to a local factory.**

April:
- **Automation: Basics of automation.**
- **Activities: Projects with automated devices.**

May:
- **Innovations: Technical innovations and patenting.**
- **Activities: Innovation workshops.**

June:
- **Review and preparation for the final test.**
- **Activities: Review of key technical concepts and skills.**

Kunst (Art)

September:
- **Introduction to Fine Art: Basic Concepts and Techniques.**
- **Activities: Drawing basic shapes.**

October:
- **Colors and composition: Color theory.**
- **Activities: Painting with different techniques.**

November:
- **Sculpture: Basic shaping techniques.**
- **Activities: Making clay sculptures.**

December:
- **Art Throughout History: An Overview of Artistic Periods.**
- **Activities: Presentations on art styles.**

January:
- **Graphics: Techniques of graphics.**
- **Activities: Making graphic prints .**

HALLO WIR SIND IDSS

February:
- **Contemporary Art: Trends and Artists.**
- **Activities: Discussion on contemporary art.**

March:
- **Photography: Basic photography techniques.**
- **Activities: Photography and image processing.**

April:
- **Design: Basics of Design.**
- **Activities: Graphic design projects.**

May:
- **Multimedia art: A fusion of traditional and digital art.**
- **Activities: Creation of multimedia projects.**

June:
- **Review and preparation for the final test.**
- **Activities: Exhibition of works and repetition of key concepts.**

Sport (Physical and Health Culture)

September:
- **Basic exercises: Aerobic exercises and warm-up.**
- **Activities: Group exercises.**

October:
- **Athletics: Running, jumping, throwing.**
- **Activities: Athletic competitions.**

November:
- **Team sports: Football, basketball, volleyball.**
- **Activities: Tournaments in team sports.**

December:
- **Gymnastics: Basic gymnastic skills.**
- **Activities: Gymnastic exercises.**

January:
- **Health and Nutrition: The Basics of Healthy Eating.**
- **Activities: Workshops on healthy eating.**

February:
- **Winter sports: Skiing, skating.**
- **Activities: Excursions in the snow.**

March:
- **Swimming: Basic swimming techniques.**
- **Activities: Swimming training.**

April:
- **Outdoor recreation: Mountaineering, cycling.**
- **Activities: Excursions and recreation in nature.**

May:
- **Sports games: Outdoor and indoor games.**
- **Activities: Organization of sports days.**

June:
- **Review and preparation for the final test.**
- **Activities: Repetition of key sports skills.**

HALLO WIR SIND IDSS

Musik (Music Culture)

September:
- **Basic terms of music: Notes, rhythm, melody.**
- **Activities: Learning basic musical concepts.**

October:
- **Instruments: Introduction to different instruments.**
- **Activities: Playing simple melodies.**

November:
- **Singing: Basic singing techniques.**
- **Activities: Choreographed singing.**

December:
- **Music Genres: Overview of different genres.**
- **Activities: Listening and analyzing musical works.**

January:
- **Composition: Writing simple compositions.**
- **Activities: Creating your own melodies.**

February:
- **Music History: An Overview of Important Periods and Composers.**
- **Activities: Presentations about composers.**

March:
- **Contemporary music: Trends and performers.**
- **Activities: Discussion on contemporary music.**

April:
- **Music Theory: Advanced Theoretical Foundations.**
- **Activities: Exercises in music theory.**

May:
- **Orchestra: Learning about orchestral performance .**
- **Activities: Rehearsal of orchestral pieces.**

June:
- **Review and preparation for the final test.**
- **Activities: Performance of the final performance.**

Nachmittingsprogramm (Afternoon Program)

September:
- **Getting to know each other and socializing: Games for getting to know each other and socializing, group activities to strengthen team spirit, workshops to develop trust among students.**
- **Activities: Creative workshops such as drawing, painting, making masks and collages. Also, organizing themed days where students can present their hobbies and interests .**

October:
- **Reading and Writing: Literary workshops that include reading books, writing short stories and poems, and discussing the works read.**
- **Activities: Written creativity, keeping a diary, writing letters to friends from other schools, and creating a school magazine with students' works.**

November:
- **Sports and recreation: Outdoor games such as football, basketball, volleyball, and organizing small sports tournaments.**

- **Activities: Sports competitive games that include relay races, sack jumping, tug of war, and other fun and motivating activities.**

December:

- **Artistic activities: Art workshops that include painting, drawing, modeling with clay, making sculptures, and decorating classrooms and school corridors.**
- **Activities: Making holiday decorations, such as Christmas and New Year decorations, making greeting cards, and organizing a holiday fair where students can sell their work.**

January:

- **Science activities: Simple experiments in physics, chemistry and biology, such as making volcanoes, making crystals, and observing microorganisms under a microscope.**
- **Activities: Scientific workshops that include visits to local museums and science centers, as well as guest appearances by local scientists who will present interesting scientific phenomena to students.**

February:

- **Board games: Strategy and logic through chess, checkers, monopoly, and other games that encourage thinking and planning.**
- **Activities: Tournaments in board games where students can show their skills and compete against each other in a friendly environment .**

March:

- **Dance and music: Dance workshops that include learning different dance styles, from traditional folk dances to modern urban dances.**
- **Activities: Choreographies and dance games, organization of dance competitions, and preparation for school events and performances.**

April:

- **Environmental activities: Recycling and environmental protection, planting trees and flowers, and cleaning the school yard and local parks.**
- **Activities: Ecological projects that include the creation of eco-posters, the creation of objects from recycled materials, and the organization of ecological workshops and presentations.**

May:

- **Workshops: Various creative workshops that include handicrafts, jewelry making, sewing, and other activities that encourage creativity and the development of fine motor skills.**
- **Activities: Making crafts that students can take home or display at school, and organizing exhibitions where parents and visitors can see the students' work.**

June:

- **Review and preparation for the final performance: Organization and staging of the performance, preparation of the performance, creation of scenography, and rehearsal of the program.**
- **Activities: Final performance that includes all the activities and workshops that the students attended during the year, as well as the presentation of their works and achievements .**

Grade 9

Mathematik (Mathematics)

September:

- **Basic concepts and operations: Repeating basic arithmetic operations (addition, subtraction, multiplication , division), work with whole numbers, fractions and decimal numbers. Introduction to algebra and basic algebraic operations.**
- **Activities: Solving simple mathematical tasks and exercises, group work on mathematical problems, using mathematical games to strengthen understanding of basic concepts.**

October:

- **Algebra and functions: Introduction to the concept of functions, linear functions, graphs and tables. Solving linear equations and systems of equations.**
- **Activities: Graphing functions, working on interactive tasks, using graphing software tools.**

November:

- **Geometry: Basic geometric concepts, types of angles, triangles, quadrilaterals and polygons. Concept of area and volume.**
- **Activities: Constructive tasks with geometric shapes, measurement and calculation of surfaces and volumes, practical workshops with geometric tools.**

December:

- **Probability and statistics: Basic concepts of probability , calculation probabilities of simple events. Introduction to statistics, data collection, tables and graphs.**
- **Activities: Practical exercises with data collection, creation of tables and graphs, analysis of results, group projects related to statistics.**

January:

- **Polynomials and rational functions: Basic concepts of polynomials, operations with polynomials, division of polynomials. Rational functions and their properties.**
- **Activities: Solving algebraic problems, graphical representation of polynomials and rational functions, use of software tools for function analysis.**

February:

- **Trigonometry: Basic trigonometric concepts and functions, sine, cosine, tangent. Trigonometric equations.**
- **Activities: Graphical presentation of trigonometric functions, solving trigonometric problems, practical exercises with trigonometric tools.**

March:

- **Analytical geometry: Lines in a plane, circle, parabola, hyperbola and ellipse. Coordinates of points.**
- **Activities: Using the coordinate system to draw graphs, solving analytical geometry problems, group projects.**

April:

- **Mathematical analysis: Basic concepts of differential and integral calculus, derivatives and integrals.**
- **Activities: Practical exercises with differential and integral calculus, problem solving, use of software tools for function analysis.**

May:

- **Combinatorics: Basic concepts of combinatorics, permutations, combinations and variations.**
- **Activities: Solving combinatorics tasks, practical exercises , group work on projects related to combinatorics.**

June:

- **Review and preparation for the final exam: Repetition of all covered topics, solving tasks from previous exams, preparation for the final exam.**

HALLO WIR SIND IDSS

- **Activities: Exam simulations, group work and discussion, individual consultations with the teacher.**

Deutsch (German Language)

September:
- **Getting to know the basics: Repeating basic grammar rules, learning new vocabulary, basic conversational expressions.**
- **Activities: Conversation exercises , writing short compositions, listening and analyzing simple texts.**

October:
- **Grammar and spelling: Detailed study of verb tenses, rules for the use of articles, adjectives and prepositions.**
- **Activities: Grammar exercises , writing essays, reading and analyzing literary texts.**

November:
- **Reading and analysis of texts: Reading and analysis of literary works , discussion of read texts, learning new vocabulary.**
- **Activities: Writing analyzes and presentations of read books, group discussions, presentations of read works .**

December:
- **Conversation and listening: Developing listening and speaking skills , learning expressions used in everyday life.**
- **Activities: Conversation exercises in pairs, listening to audio material, simulation of everyday situations.**

January:
- **Writing and style: Learning different writing styles, formal and informal writing, writing essays and reports.**
- **Activities: Writing different types of letters, analysis of writing styles, creative writing exercises .**

February:
- **Cultural topics: Learning about German -speaking culture and traditions, holidays, customs and historical events.**
- **Activities: Preparation of presentations on cultural topics, watching documentaries, organization of cultural workshops.**

March:
- **Literature: Reading and analysis of works German literature , discussion of literary themes and styles.**
- **Activities: Writing literary essays, group discussions, drama workshops based on the works read .**

April:
- **Media and communication: Learning about different types of media, analysis of media content, development of critical thinking skills .**
- **Activities: Analysis of newspaper articles, viewing and discussion of television shows, interview simulation.**

May:
- **Preparation for the exam: Repetition of all covered topics, exercises for exam tasks, exam simulation.**
- **Activities: Solving tasks from past exams, individual consultations, group work and discussion.**

June:

HALLO WIR SIND IDSS

- **Review and preparation for the final exam: Repetition of all covered topics, solving tasks from previous exams, preparation for the final exam.**
- **Activities: Exam simulations, group work and discussion, individual consultations with the teacher.**

Englisch (English)

September:
- **Getting to know the basics: Repeating basic grammar, learning new vocabulary, basic conversational expressions.**
- **Activities: Conversation exercises , writing short compositions, listening and analyzing simple texts.**

October:
- **Grammar and spelling: Detailed study of verb tenses, rules for the use of articles, adjectives and prepositions.**
- **Activities: Grammar exercises , writing essays, reading and analyzing literary texts.**

November:
- **Reading and analysis of texts: Reading and analysis of literary works , discussion of read texts, learning new vocabulary.**
- **Activities: Writing analyzes and presentations of read books, group discussions, presentations of read works .**

December:
- **Conversation and listening: Developing listening and speaking skills , learning expressions used in everyday life.**
- **Activities: Conversation exercises in pairs, listening to audio material, simulation of everyday situations.**

January:
- **Writing and style: Learning different writing styles, formal and informal writing, writing essays and reports.**
- **Activities: Writing different types of letters, analysis of writing styles, creative writing exercises .**

February:
- **Cultural topics: Learning about English-speaking cultures and traditions, holidays, customs and historical events.**
- **Activities: Preparation of presentations on cultural topics, watching documentaries, organization of cultural workshops.**

March:
- **Literature: Reading and analysis of works of English literature , discussion of literary themes and styles.**
- **Activities: Writing literary essays, group discussions, drama workshops based on the works read .**

April:
- **Media and communication: Learning about different types of media, analyzing media content, developing critical thinking skills .**
- **Activities: Analysis of newspaper articles, viewing and discussion of television shows, interview simulation.**

May:
- **Preparation for the exam: Repetition of all covered topics, exercises for exam tasks, exam simulation.**

HALLO WIR SIND IDSS

- **Activities: Solving tasks from past exams, individual consultations, group work and discussion.**

June:

- **Review and preparation for the final exam: Repetition of all covered topics, solving tasks from previous exams, preparation for the final exam.**
- **Activities: Exam simulations, group work and discussion, individual consultations with the teacher.**

Bosnisch (Bosnian Language)

September:

- **Getting to know the basics: Repeating basic grammar, learning new vocabulary, basic conversational expressions.**
- **Activities: Conversation exercises , writing short compositions, listening and analyzing simple texts.**

October:

- **Grammar and spelling: Detailed study of verb tenses, rules for the use of articles, adjectives and prepositions.**
- **Activities: Grammar exercises , writing essays, reading and analyzing literary texts.**

November:

- **Reading and analysis of texts: Reading and analysis of literary works , discussion of read texts, learning new vocabulary.**
- **Activities: Writing analyzes and presentations of read books, group discussions, presentations of read works .**

December:

- **Conversation and listening: Developing listening and speaking skills , learning expressions used in everyday life.**
- **Activities: Conversation exercises in pairs, listening to audio material, simulation of everyday situations.**

January:

- **Writing and style: Learning different writing styles, formal and informal writing, writing essays and reports.**
- **Activities: Writing different types of letters, analysis of writing styles, creative writing exercises .**

February:

- **Cultural topics: Learning about Bosnian-speaking culture and traditions, holidays, customs and historical events.**
- **Activities: Preparation of presentations on cultural topics, watching documentaries, organization of cultural workshops.**

March:

- **Literature: Reading and analysis of works of Bosnian literature , discussion of literary themes and styles.**
- **Activities: Writing literary essays, group discussions, drama workshops based on the works read .**

April:

- **Media and communication: Learning about different types of media, analysis of media content, development of critical thinking skills .**
- **Activities: Analysis of newspaper articles, viewing and discussion of television shows, interview simulation.**

May:

HALLO WIR SIND IDSS

- **Preparation for the exam: Repetition of all covered topics, exercises for exam tasks, exam simulation.**
- **Activities: Solving tasks from past exams, individual consultations, group work and discussion.**

June:

- **Review and preparation for the final exam: Repetition of all covered topics, solving tasks from previous exams, preparation for the final exam.**
- **Activities: Exam simulations, group work and discussion, individual consultations with the teacher.**

Biologie (Biology)

September:

- **Introduction to biology: Basic concepts, goals and methods of biology. Introduction to cellular structure and function.**
- **Activities: Microscopic observation of cells, drawing of cell structures, study of different types of cells.**

October:

- **Cell Biology: Detailed study of the cell membrane, cytoplasm, organelles and their functions.**
- **Activities: Laboratory exercises with cell preparations, drawing and describing organelles , group projects.**

November:

- **Genetics: Basic concepts of genetics, Mendelian laws, DNA structure and function.**
- **Activities: Creation of DNA models, simulation of genetic crosses , analysis of genetic tasks.**

December:

- **Evolution: Basic concepts of evolution, theories of evolution, evolutionary processes.**
- **Activities: Discussion on theories of evolution, analysis of fossil remains, creation of evolutionary trees.**

January:

- **Ecology: Basic concepts of ecology, ecosystems, biogeographic zones, ecological factors.**
- **Activities: Field research of ecosystems, drawing ecological pyramids, group ecological projects.**

February:

- **Physiology of plants: Basic functions of plants, photosynthesis, respiration, transport of water and nutrients.**
- **Activities: Laboratory exercises with plants, observing photosynthesis and respiration, drawing plant structures.**

March:

- **Physiology of animals: Basic functions of animals, organ system, nervous, endocrine and circulatory system.**
- **Activities: Laboratory exercises with animal preparations, observation and drawing of anatomical structures, group projects.**

April:

- **Biotechnology: Basic concepts of biotechnology, genetic engineering, biotechnological methods and applications .**
- **Activities: Discussion on the application of biotechnology, analysis of biotechnological projects, creation of models of biotechnological processes.**

HALLO WIR SIND IDSS

May:

- **Environmental protection: Basic concepts of environmental protection, pollution , preservation and restoration of ecosystems.**
- **Activities: Field research pollution , creation of ecological posters, group ecological projects.**

June:

- **Review and preparation for the final exam: Repetition of all covered topics, solving tasks from previous exams, preparation for the final exam.**
- **Activities: Exam simulations, group work and discussion, individual consultations with the teacher.**

Physik (Physics)

September:

- **Introduction to physics: Basic concepts and quantities.**
- **Activities: Measuring and experimenting with different physical quantities.**

October:

- **Kinematics: Velocity, acceleration and graphical representations.**
- **Activities: Analysis of the movement of objects through practical examples.**

November:

- **Dynamics: Newton's laws.**
- **Activities: Experiments with forces and movements.**

December:

- **Energy: Potential and kinetic energy.**
- **Activities: Experiments and simulations of energy transformations.**

January:

- **Thermodynamics: Heat and temperature.**
- **Activities: Temperature measurement and research of thermal processes.**

February:

- **Optics: Light and its laws.**
- **Activities: Experiments with mirrors, lenses and prisms.**

March:

- **Electricity: Basic concepts, current and voltage.**
- **Activities: Construction of simple electric circuits.**

April:

- **Magnetism: Magnetic fields and their application.**
- **Activities: Investigation of magnetic effects through laboratory exercises.**

May:

- **Waves: Sound and electromagnetic waves.**
- **Activities: Generation and analysis of different types of waves.**

June:

- **Repetition and preparation for the final exam.**
- **Activities: Review of key concepts and test preparation.**

Chemie (Chemistry)

September:

- **Introduction to Chemistry: Basic Concepts and Laboratory Rules.**
- **Activities: Demonstrations of safety and basic chemical reactions.**

October:

HALLO WIR SIND IDSS

- Atomic structure: Elements and periodic table.
- Activities: Creating a model of the atomic structure.

November:
- Chemical bonds: Ionic and covalent bonds.
- Activities: Experiments with different types of chemical bonds.

December:
- Reactions: Types of chemical reactions.
- Activities: Demonstrations of exothermic and endothermic reactions.

January:
- States of matter: Solid, liquid and gaseous states.
- Activities: Experiments with changes in the state of matter.

February:
- Solutions: Solubility and concentration.
- Activities: Preparation and analysis of solutions of different concentrations.

March:
- Acids and bases: Basic concepts and pH scale.
- Activities: Measuring the pH value of various substances.

April:
- Redox reactions: Basic principles.
- Activities: Demonstration of oxidation and reduction.

May:
- Organic chemistry: Basic concepts and structures.
- Activities: Creation of models of organic molecules.

June:
- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Geschichte (History)

September:
- Introduction to History: Methods and Sources.
- Activities: Analysis of historical sources and documents.

October:
- Old Age: Civilizations of Mesopotamia and Egypt.
- Activities: Projects on ancient cultures.

November:
- Ancient Greece: Culture and Politics.
- Activities: Debate on Athenian democracy.

December:
- The Roman Empire: The Rise and Fall.
- Activities: Analysis of the causes of the fall of the Roman Empire.

January:
- The Middle Ages: Feudalism and the Crusades.
- Activities: Making models of medieval castles .

February:
- Renaissance: Cultural and scientific flourishing.
- Activities: Presentation of the works of Renaissance artists.

March:
- Industrial Revolution: Changes in Society and Economy.
- Activities: Analysis of the impact of industrialization on everyday life.

HALLO WIR SIND IDSS

April:
- **World Wars: Causes and Consequences.**
- **Activities: Group projects on key battles and events.**

May:
- **The Cold War: Conflict and Politics.**
- **Activities: Debate on the ideological conflict between East and West.**

June:
- **Repetition and preparation for the final exam.**
- **Activities: Review of key concepts and test preparation.**

Erdkunde (Geography)

September:
- Introduction to Geography: Maps and Spatial Analysis.
- Activities: Creation and analysis of geographic maps.

October:
- Physical geography: Relief and climatic zones.
- Activities: Projects on different climate zones.

November:
- Hydrography: Rivers, lakes and oceans.
- Activities: Water resources research through field activities.

December:
- Geology: Rocks and minerals.
- Activities: Collection and analysis of rock samples.

January:
- Biogeography: Ecosystems and biodiversity .
- Activities: Research of local ecosystems.

February:
- Demography: Population and migration.
- Activities: Analysis of demographic data and trends.

March:
- Economic Geography: Economy and Resources.
- Activities: Case studies on economic activities in different regions.

April:
- Urbanization: Cities and their structure.
- Activities: Urban area research and city planning.

May:
- Political Geography: States and Borders.
- Activities: Analysis of the political map of the world.

June:
- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Französisch (French Language)

September:
- Basic vocabulary and phrases: Getting to know each other.
- Activities: Conversation exercises and games.

October:
- Grammar: Verbs in the present tense.

HALLO WIR SIND IDSS

- Activities: Writing simple sentences and dialogues.

November:
- Culture: French customs and festivals.
- Activities: Presentations on French culture.

December:
- Reading and comprehension: Simple texts.
- Activities: Reading stories and content analysis.

January:
- Listening and pronunciation: Listening exercises.
- Activities: Listening to audio material and repeating.

February:
- Writing: Compositions and short essays.
- Activities: Writing short essays on given topics.

March:
- Conversation: Thematic dialogues.
- Activities: Practicing dialogue in pairs.

April:
- Advanced Grammar: Past and Future Tense.
- Translation and writing exercises .

May:
- Cultural activities: French cuisine and music.
- Activities: Organization of a cultural day.

June:
- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Ethik (Ethics)

September:
- Introduction to ethics: Basic terms and principles.
- Activities: Discussions on moral dilemmas.

October:
- Moral Philosophers: A Survey of Key Thinkers.
- Activities: Presentations about philosophers and their ideas.

November:
- Ethical theories: Deontology , utilitarianism, virtue ethics.
- Activities: Analysis and application of ethical theories on examples.

December:
- Human rights: Basic rights and freedoms.
- Activities: Debate on current human rights issues.

January:
- Social Justice: Fairness and Equality.
- Activities: Case studies and discussions on social injustices.

February:
- Environmental ethics: Responsibility towards nature.
- Activities: Environmental protection projects.

March:
- Bioethics: Ethical issues in medicine.
- Activities: Analysis of cases from medical practice.

April:

HALLO WIR SIND IDSS

- Professional ethics: Ethical norms in different professions.
- Activities: Discussions on ethics in the business world.

May:

- Multicultural ethics: Different ethical systems.
- Activities: Presentations on ethical norms in different cultures.

June:

- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Informatik (Informatics)

September:

- Computer Basics: Hardware and Software.
- Activities: Computer assembly and software installation.

October:

- Programming: Basic Concepts and Languages.
- Activities: Writing simple programs.

November:

- Algorithms and logic: Basic algorithms.
- Activities: Solving logical problems and tasks.

December:

- Networks: Basic terms about computer networks.
- Activities: Design and configuration of simple networks.

January:

- Web Design: Basics of HTML and CSS.
- Activities: Creating a simple website.

February:

- Databases: Basic concepts and SQL.
- Activities: Creation and management of databases.

March:

- Security: Basics of computer security.
- Activities: Simulation of security attacks and protective measures.

April:

- Advanced programming: More complex algorithms and data structures.
- Activities: Implementation of more complex software solutions.

May:

- Project work: Creation of a complete IT project.
- Activities: Work on group projects.

June:

- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Technische Erziehung (Technical Education)

September:

- Introduction to the technique: Basic concepts and tools.
- Activities: Demonstration and use of basic tools.

October:

- Mechanics: Basic principles and application.
- Activities: Making simple mechanical devices.

HALLO WIR SIND IDSS

November:
- Electronics: Basic electronic elements.
- Activities: Assembling basic electronic circuits.

December:
- Technical drawing: Basics of technical drawing.
- Activities: Production of technical drawings and sketches.

January:
- Construction: Basic principles of construction.
- Activities: Making models of construction facilities.

February:
- Automation: Basic principles of automation.
- Activities: Programming simple automated systems.

March:
- Energy: Energy sources and their application.
- Activities: Projects on renewable energy sources.

April:
- Transport: Transport techniques and technologies.
- Activities: Case studies on different transport systems.

May:
- Innovation and design: Creative processes in technology.
- Activities: Workshops on innovation and design.

June:
- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Kunst (Art)

September:
- Basics of drawing: Line, shape and perspective.
- Activities: Exercises in drawing basic shapes.

October:
- Painting techniques: Watercolor, tempera and oil.
- Activities: Experiments with different painting techniques.

November:
- Sculpture: Modeling and making sculptures.
- Activities: Working with clay and other materials.

December:
- Graphics: Printing and graphics techniques.
- Activities: Making graphic prints.

January:
- Art analysis: Analysis of works of art.
- Activities: Discussions about famous works of art.

February:
- Photography: Basic Principles and Techniques.
- Activities: Photography and photo analysis.

March:
- Digital Art: Working in Digital Media.
- Activities: Creating digital artwork.

April:
- Applied Art: Design and Functionality.

HALLO WIR SIND IDSS

- Activities: Applied art projects.

May:
- Cultural heritage: Tradition and modernity.
- Activities: Creating works inspired by cultural heritage.

June:
- Rehearsal and preparation for the final exhibition .
- Activities: Organization and exhibition of works.

Sport (Physical and Health Culture)

September:
- Basic sports activities: Athletics and gymnastics.
- Activities: Training of basic sports disciplines.

October:
- Team sports: Football, basketball, volleyball.
- Activities: Organization and participation in team games.

November:
- Individual sports: Tennis, badminton.
- Activities: Training and mini-competitions in individual sports.

December:
- Recreational activities: Mountaineering and cycling.
- Activities: Organization of recreational trips.

January:
- Winter sports: Skiing and skating.
- Activities: Learning the basic techniques of winter sports.

February:
- Swimming: Basic swimming techniques.
- Activities: Training in the pool.

March:
- Aerobics and fitness: Exercises for fitness.
- Activities: Aerobics and fitness training.

April:
- Martial arts: Basic techniques.
- Activities: Demonstration and practice of martial arts.

May:
- Sports tournaments: Organization and participation.
- Activities: Participation in school sports tournaments.

June:
- Repetition and preparation for the final exam.
- Activities: Review of key concepts and test preparation.

Musik (Music Culture)

September:
- Introduction to musical culture: Getting to know the basic concepts of musical culture.
- Activities: Listening to different musical genres and identifying instruments.

October:
- Music History: An overview of important periods in music history.
- Activities: Analysis of musical works from different historical periods.

HALLO WIR SIND IDSS

November:
- Instruments: Introduction to different musical instruments.
- Activities: Workshops on playing different instruments.

December:
- Music and Emotions: How Music Affects Our Emotions.
- Activities: Listening and analyzing musical compositions that evoke different emotions.

January:
- Musical ensembles: Getting to know different types of musical ensembles (orchestra, band, solo).
- Activities: Creating your own musical compositions and performances.

February:
- Music and Technology: The Impact of Technology on Music Production.
- Activities: Use of music production software.

March:
- Folk music: Introduction to folk music and instruments.
- Activities: Performing folk songs and playing folk instruments.

April:
- World Music: An overview of different musical cultures around the world.
- Activities: Listening and analyzing musical works from different parts of the world.

May:
- Musical composition: Basics of composing music.
- Activities: Creating your own musical compositions.

June:
- Preparation for the final performance: Selection and practice of musical compositions for the final performance.
- Activities: Organization and staging of the musical part of the final performance.

Nachmittingsprogramm (Afternoon Program)

September:
- Getting to know each other: Dating games and team games.
- Activities: Creative workshops and joint projects.

October:
- Reading and writing: Literary workshops and writing short stories.
- Activities: Written creativity and making your own books.

November:
- Sports and recreation: Outdoor games and sports activities.
- Activities: Sports competition games and team exercises.

December:
- Artistic activities: Art workshops and creation of works of art.
- Activities: Making decorations for the holidays and decorating the space.

January:
- Science activities: Simple experiments and research workshops.
- Activities: Scientific workshops and presentations of research results .

February:
- Board games: Strategy and logic through different games.
- Activities: Tournaments in board games and team games.

March:
- Dance and music: Dance workshops and choreographies.

HALLO WIR SIND IDSS

- Activities: Choreographies and dance games and preparation for dance performances.

April:

- Environmental activities: Recycling and environmental protection through various projects.
- Activities: Ecological projects and production of ecological products.

May:

- Workshops: Various creative workshops and handicrafts.
- Activities: Crafting and creative projects.

June:

- Review and preparation for the final performance: Organization and staging of the final performance.
- Activities: Preparation and rehearsal for the final performance, decoration of the space and distribution of invitations.

2.3. Work methods

In accordance with the most modern educational practices and educational standards applied in primary and secondary schools in Baden-Württemberg and Thuringia , Germany, the working methods at the Internationale Deutsche Schule Sarajevo have been carefully selected and implemented to ensure optimal learning and student development. These methods are based on the principles of inclusive education, intercultural learning and sustainable development, which are key aspects of educational policies in these German federal states.

Didactic methods

1. **Lectures and interactive discussions**
   - Structured lectures to introduce new concepts, followed by interactive discussions.
   - Application " Flipped Classroom " method, where students study materials in advance, and classroom time is used for deeper discussions and application of knowledge.
   - Using the " Think-Pair-Share " technique to encourage active participation and exchange of ideas among students.
2. **Group work and project learning**
   - Implementation of long-term interdisciplinary projects that connect different subjects.
   - Using the method " Stationenlernen " (learning by stations), where students rotate through different tasks in small groups.
   - Application of the "Service Learning " concept, where students contribute to the local community through projects.
3. **Experimental and exploratory learning**
   - Conducting laboratory experiments with a focus on STEM areas.
   - Implementation of " Forschendes Lernen " (research learning) method, where students independently formulate hypotheses and conduct research .
   - Organization of field research and excursions for practical experience in a real environment .
4. **Digital technologies and media literacy**
   - Integrating digital tools into teaching, including educational applications and e-learning platforms.

- Development of programming and robotics skills through practical workshops.
- Implementation of "BYOD" (Bring Your Own Virgo) policies to encourage digital literacy.

5. **Art and creative expression**
    - Using dramatic techniques and plays to learn language and cultural content.
    - Implementation of art workshops for the visualization of scientific and social concepts.
    - Organization of musical projects for the development of creativity and teamwork.

Customization and individualization

1. **Individualized learning plans**
    - Development of personal education plans (IEP - Individueller Entwicklungsplan) for each student.
    - Application of " Lernlandkarten " (learning maps) to visualize individual student progress.
    - Implementation of the " Lernbüro " concept, where students independently choose tasks according to their needs and interests .
2. **Differentiation of teaching**
    - Adaptation of teaching materials to different levels of knowledge and learning styles (visual, auditory, kinesthetic).
    - Using the " Binnendifferenzierung " method to adjust tasks within the same classroom.
    - Implementation of " Werkstatunterricht " (workshop classes) to allow students to work at their own pace.
3. **Inclusive education**
    - Applying the principles of Universal Design for Learning (UDL) in the creation of teaching materials.
    - Using assistive technologies to support students with special needs.
    - Implementation of the " Buddy-System " program for peer support and inclusion.
4. **Intercultural learning**
    - Organization of international exchanges and partnerships with schools from other countries.
    - Implementation of the "Tandem- Learning " method for language learning and cultural exchange.
    - Using authentic materials from different cultures in teaching.
5. **Grading and feedback**
    - Application of formative assessment through regular feedback and student self-assessment .
    - Using portfolios and projects for comprehensive assessment of student achievement .
    - Implementation of " Lernentwicklungsgespräche " (learning development conversations) with students and parents.

These work methods are designed to support the holistic development of students, encouraging not only academic skills, but also socio -emotional competence, critical thinking and civic responsibility. They are in line with the educational goals of Baden-Württemberg and Thuringia , which emphasize the importance of lifelong learning, sustainable development and preparing students for a globalized world.

2.4. Evaluation criteria

In accordance with the most up-to-date educational practices and educational standards applied in primary and secondary schools in Baden-Württemberg and Thuringia , Germany, the assessment criteria are designed to be comprehensive, transparent and fair. They are aimed at the holistic development of students and are aligned with the principles of the competency-based approach to education.

Grading rules

1. **Mathematik (Mathematics)**
    - Assessment of accuracy and efficiency in problem solving, with an emphasis on the application of different problem-solving strategies.
    - Assessment of understanding of mathematical concepts through verbal and written explanations.
    - Evaluation of the ability to apply mathematical knowledge in real situations and interdisciplinary contexts.
    - Assessment of skills in modeling mathematical problems and using mathematical language.
    - Assessment of the ability to use digital tools for mathematical analysis and visualization.
2. **Deutsch (German Language)**
    - Assessment of accuracy in grammar and spelling, with a focus on the progressive acquisition of more complex language structures.
    - Evaluation of clarity of expression and richness of vocabulary in oral and written expression .
    - Assessment of creativity in writing through different genres and styles.
    - Assessment of the ability to analyze and interpret different types of texts, including literary works and media content.
    - Evaluation of presentation and argumentation skills in debates and discussions.
3. **Naturwissenschaften (Natural sciences)**
    - Assessment of the ability to plan, perform and document experiments.
    - Assessment of understanding of scientific principles and their application in everyday life.
    - Evaluation of the ability to interpret results and draw conclusions based on evidence.
    - Assessment of critical thinking skills and scientific literacy.
    - Assessment of ability to use scientific terminology and modeling of natural phenomena.
4. **Sozialwissenschaften (Social sciences)**
    - Assessing understanding of historical and cultural contexts, with an emphasis on multiperspectivity .
    - Evaluation of the ability to analyze social structures and processes through different theoretical frameworks.
    - research skills , including data collection, analysis and presentation.
    - Assessment of the ability to think critically and evaluate different sources of information.
    - Evaluation of understanding of the concepts of democracy, human rights and sustainable development.

HALLO WIR SIND IDSS

Types of evaluation

1. **Formative evaluation**
   - Continuous monitoring of progress through regular tasks, projects and discussions.
   - Implementation of " Lerntagebücher " (learning diaries) for student self-reflection.
   - Using digital tools for instant feedback and tracking progress.
   - Application of peer assessment for the development of critical thinking and collaboration.
   - Regular individual discussions with students about their progress and learning goals.
2. **Summative evaluation**
   - Conducting standardized tests at the end of educational units or semesters.
   - Organization of final projects that integrate knowledge from different subjects.
   - Conducting oral exams to assess depth of understanding and communication skills.
   - Implementation of the portfolio as a comprehensive representation of student achievements .
   - Using digital tools for adaptive testing and analysis of results.
3. **Competency assessment**
   - Assessment of key competences defined in the educational standards of Baden-Württemberg and Thuringia .
   - Evaluation of transversal skills such as critical thinking, creativity and digital literacy.
   - Assessment of social and emotional competences through observations and self-assessment .
   - Assessment of media literacy and ability to critically analyze information.
4. **Inclusive assessment**
   - Adapting assessment methods to students with special educational needs.
   - Using different assessment formats to accommodate different learning styles.
   - Implementation of " Nachteilsausgleich " (disadvantage compensation) for fair grading.
5. **Assessment in project teaching**
   - Evaluation of project work processes, including planning, research and collaboration.
   - Assessment of the final product of the project through predefined rubrics.
   - Assessment of presentation skills and ability to answer questions.
6. **Self-assessment and peer assessment**
   - Encouraging students to regularly self-assess through structured forms.
   - Implementation of peer assessment to develop critical thinking and constructive feedback.
   - Using the " Kompetenzraster " (competency grid) to visualize progress.

These assessment criteria are designed to support the individual development of each student, encouraging not only academic achievement , but also the development of key competencies required for lifelong learning and active citizenship. They are aligned with the educational goals of Baden-Württemberg and Thuringia , which emphasize the importance of a holistic approach to education and preparing students for the challenges of the 21st century.

2.5. Teaching materials

In accordance with the latest educational standards and practices in Baden-Württemberg and Thuringia , our teaching materials have been carefully selected and developed to support a comprehensive and quality education. These materials are designed to encourage critical thinking, creativity, and independent learning while providing a strong foundation in key academic areas.

Textbooks
Our textbooks are selected according to rigorous standards of quality and relevance, and are approved by the relevant educational institutions in Baden-Württemberg and Thuringia .

Mathematik (Mathematics)
Mathematics textbooks are structured according to a spiral curriculum , which enables the gradual upgrading of knowledge. They cover:

- Basic arithmetic operations and algebraic concepts
- Geometry and spatial thinking
- Statistics and probability
- Advanced topics like calculus for upper grades

Each textbook contains numerous real-life examples, interactive tasks and projects that connect mathematics with other subjects, in line with the interdisciplinary approach promoted in the German education system.

Deutsch (German Language)
German language textbooks are designed to develop students' language competences through an integrated approach:

- Grammar: Progressive introduction and practice of grammatical structures
- Vocabulary: Thematically organized lessons with a focus on contextual learning
- Literature: Carefully selected texts representing the diversity of German and world literature
- Writing: Structured exercises to develop writing skills in different genres
- Oral communication: Activities to improve speaking skills and presentation skills

Naturwissenschaften (Natural sciences)
Natural science textbooks follow MINT (Mathematics , Informatics , Naturwissenschaften und Technik) approach applied in German schools:

- Biology: Ecology, human anatomy, genetics and evolution
- Chemistry: Atomic structure, chemical reactions, organic chemistry
- Physics: Mechanics, electromagnetism, thermodynamics
- Integrated science: An interdisciplinary approach that connects different scientific disciplines

Each textbook contains detailed descriptions of experiments, safety guidelines, and critical thinking questions.

Sozialwissenschaften (Social sciences)
Social studies textbooks are designed to develop civic competence and critical understanding of social processes:

- History: German, European and world history with a focus on critical analysis of historical sources

HALLO WIR SIND IDSS

- Geography: Physical and human geography with an emphasis on sustainable development and global challenges
- Politics and economics: Basics of political systems and economic principles
- Ethics and Religion: A Comparative Approach to World Religions and Ethical Issues

Manuals

Guides for teachers
Our teacher guides provide comprehensive support for curriculum implementation:
- Detailed lesson plans with clearly defined learning objectives
- Suggestions for differentiating instruction to meet the needs of all students
- Ideas for project teaching and interdisciplinary activities
- Guidelines for formative and summative assessment
- Resources for teacher professional development

Working materials
Additional resources are designed to support and extend learning:
- Workbooks with exercises of different levels of difficulty
- Sheets for independent study and homework
- Preparation materials for standardized tests
- Creative tasks and projects that encourage the application of knowledge in real life

Additional resources
Specialized materials for advanced learning:
- Guides for science experiments with detailed instructions and analysis of results
- Collections of literary texts with critical analyses
- Materials for language immersion and intercultural learning
- Resources for professional orientation and career development

Digital materials
In accordance with the digital education strategy of Baden-Württemberg and Thuringia , our school integrates the most modern digital tools into teaching.

Software tools
- Applications for adaptive learning of mathematics and languages
- Simulations for the natural sciences
- Tools for digital creativity and media production
- Platforms for collaborative learning and project work

We especially highlight our AI chatbot " Lesson Plan (for IDSS Teachers) " which uses artificial intelligence to help teachers create innovative and effective lesson plans. This tool is aligned with the latest pedagogical approaches and enables the personalization of teaching according to the needs of students.

Online resources
- E-books and digital libraries with access to a wide range of educational materials
- Online courses for self-study and professional development of teachers
- Interactive supporting materials gamification in teaching
- Virtual tours and 3D models for an enhanced learning experience

Digital textbooks
Our digital textbooks offer a number of advantages:

- Access from any device, anytime, anywhere
- Interactive content such as videos, animations and quizzes
- The possibility of personalizing the content according to the individual needs of students
- Automatic content updates in accordance with the latest educational standards
- Tools for monitoring student progress and learning analytics

All our teaching materials are regularly evaluated and updated to stay in line with the latest educational trends and labor market requirements. Through the integration of traditional and digital resources, we strive to create a dynamic and inclusive a learning environment that prepares students for the challenges of the 21st century.

2.6. Planning and evaluation

In accordance with the educational standards of Baden-Württemberg and Thuringia , our approach to planning and evaluation is comprehensive, continuous and focused on individual student development. This process is designed to support holistic education, the development of key competencies and the preparation of students for lifelong learning.

Educational goals per semester

Our educational goals are aligned with the Bildungsplan of Baden-Württemberg and Thüringer Lehrplan , and are structured to ensure the gradual development of knowledge and skills.

First semester

- Achieving a basic understanding of key concepts in all subject areas
- Development of fundamental study skills and work habits
- Getting to know the methods of critical thinking and problem solving
- Encouraging independence in learning and research
- Development of basic digital competencies
- Strengthening social skills and teamwork
- Introducing the concepts of intercultural understanding and global awareness

Second semester

- Application and expansion of acquired knowledge through more complex tasks and projects
- Integration of knowledge from different subject areas through interdisciplinary projects
- Development of advanced critical thinking and analysis skills
- Encouraging creativity and innovation in the application of knowledge
- Deepening digital competencies, including programming and media literacy
- Strengthening presentation and communication skills
- Development of awareness of sustainable development and global challenges
- Encouraging independent setting of learning goals and self-evaluation

HALLO WIR SIND IDSS

Evaluation of student progress
evaluation system is designed to be formative and summative , providing continuous insight into student progress and supporting their individual development.

Regular tests and quizzes
- Short, focused tests that track progress in specific learning areas
- Online quizzes that enable instant feedback and adaptive learning
- Practical skills tests, especially in MINT subjects
- Oral presentations and discussions to assess communication skills
- Peer evaluations to encourage critical thinking and collaborative learning

Semester projects
- Interdisciplinary projects that integrate knowledge from several subjects
- Research projects that encourage deep learning and the development of research skills
- Group projects that develop teamwork and leadership skills
- Projects aimed at solving real-life problems, in accordance with the principles of education for sustainable development
- Digital portfolios documenting the learning process and student achievement

Final exams
- Comprehensive exams that assess overall understanding at the end of the school year
- Standardized tests aligned with state educational standards
- Practical exams that assess the application of knowledge in real situations
- Presentations of final projects before a panel of teachers and peers
- Self-evaluation of students on achieved goals and plans for future development

Structure of the progress report
Our progress reports are designed to provide a comprehensive picture of student development, in line with the principles of competency-based education.

Written reports
- Detailed comments on student progress in each subject area
- Analysis of the development of key competencies defined in educational standards
- Description of student strengths and areas for improvement
- Concrete recommendations for further work and development
- Review of the social and emotional development of students
- Comments on participation in extracurricular activities and their contribution to overall development

Ratings
- Traditional grading from 1 to 6 (1 is the best grade, 6 the worst), according to the German grading system
- A detailed explanation of the criteria for each rating
- Comparative display of grades compared to the previous period, showing progress
- Competency assessment on a scale from "developing" to "advanced" for key skills
- Special praise for outstanding achievements or progress

Consultation with parents
- Regular individual meetings with parents at least twice a year

- Discussion on academic progress, social and emotional development of students
- Joint setting of goals for the future development of students
- Tips for supporting learning at home and strengthening the school-family partnership
- Information about opportunities for additional support or program enrichment for students
- Discussion on professional orientation and career planning (for older students)

Additional evaluation elements

- portfolios documenting their work and progress throughout the year
- Regular student self-evaluations that encourage metacognitive skills
- evaluations by students, which contribute to the improvement of teaching
- Periodic external evaluations that ensure compliance with state standards

This comprehensive approach to planning and evaluation ensures that each student receives personalized support in their educational journey, in line with the highest standards of the German education system. Through continuous evaluation and feedback, we encourage the development of independent, critical thinking and competent individuals ready for the challenges of the future.

2.7. Methodology of competence development

Comprehensive Approach to Competence Development

In accordance with the educational standards of Baden-Württemberg and Thuringia , our approach to competence development is holistic and multidimensional . The goal is to create versatile, critically thinking and independent students who are ready for the challenges of the 21st century.

Developing Key Competencies

1. **Mathematical competence**
    - Implementation of a spiral curriculum that ensures a gradual deepening of mathematical understanding throughout the years of schooling.
    - Using manipulatives and concrete materials to visualize abstract concepts, especially in the lower grades.
    - Integrating technology, including dynamic geometry software and algebraic systems, to explore mathematical concepts.
    - Real-world application of mathematics through project tasks, such as planning a school garden or analyzing school energy use.
    - Regular holding of "mathematical evenings" where students present mathematical projects to parents and the community.
2. **Competence in mother language**
    - Implementing a balanced approach to literacy that includes phonics, fluency, vocabulary, comprehension and writing.
    - Organization of regular literary circles where students discuss the works they have read.
    - Introducing creative writing through workshops with local writers.
    - Implementation of the "Reading Aloud" program where older students read to younger students.

- Organization of school debates and speaking competitions for the development of oral communication.

3. **Natural science competence**
   - Implementation of inquiry-based learning (Inquiry-Based Learning) in the teaching of natural sciences.
   - Establishing partnerships with local scientific institutions for access to advanced equipment and expertise.
   - Organization of the annual science fair where students present their research projects.
   - Implementation of the " Citizen Science" program where students participate in real scientific research .
   - Integration of STEM approaches through interdisciplinary projects.
4. **Competence in social sciences**
   - Using the case study method to analyze historical events and contemporary social issues.
   - Organization of field visits to historical locations and cultural institutions.
   - Implementation of simulations and role-playing games for better understanding of social processes.
   - Involvement of students in local community projects for the development of civic awareness.
   - Organization of multicultural days to promote understanding of different cultures.

Application of Interactive Learning Methods

1. **Project learning**
   - Implementation of long-term, interdisciplinary projects that deal with real problems in the community.
   - Using digital tools for collaboration and presentation of project results.
   - Organization of a project fair at the end of the school year where students present their work to the wider community.
   - Establishing partnerships with local businesses and organizations to mentor student projects.
2. **Debates and discussions**
   - Implementation of structured debates in the classroom, using formats such as the Karl Popper debate.
   - Organization of interschool debate competitions.
   - Using the Socratic method to encourage critical thinking in discussions.
   - Implementation of an online forum to extend discussions outside the classroom.
3. **Practical work**
   - Establishing well-equipped natural science laboratories with an emphasis on safety.
   - Organization of regular field research in the local environment .
   - Implementation of the "Service Learning" program where students apply their skills in projects that benefit the community.
   - Establishing school workshops for the development of practical skills in the field of technology and crafts.

HALLO WIR SIND IDSS

Developing Digital Competencies

1. **Use of digital tools**
   - Implementation of a 1:1 program where every student has access to a personal digital device.
   - Integration of Learning Management System (LMS) to support hybrid and online learning.
   - Using virtual laboratories to simulate experiments that are not feasible in a real environment .
   - Implementation of the Digital Storytelling program for the development of creativity and digital skills.
2. **Safety on the Internet**
   - Implementation of regular workshops on digital citizenship and online security.
   - Development of a school policy on safe use of the Internet in cooperation with students and parents.
   - Organization of "Safe Internet Day" with visiting experts in the field of cyber security.
   - Implementation of the online safety peer education program.
3. **Critical use of information**
   - Implementation of the information literacy program in cooperation with the school library.
   - Organization of workshops on identifying fake news and fact-checking.
   - Implementation of projects that require critical analysis of online sources.
   - Using data visualization tools to develop information analysis and presentation skills.

This comprehensive approach to competency development ensures that students acquire not only the knowledge, but also the skills and attitudes needed to succeed in the 21st century. Through a combination of traditional and innovative learning methods, students are prepared for lifelong learning and active citizenship in a global society.

2.8. Individualization of Teaching

Individualization of teaching is a key aspect of modern education in Baden-Württemberg and Thuringia , with the aim of providing each student with optimal support for the development of his potential. This approach is based on recognizing the unique needs, interests and abilities of each student.

Comprehensive Approaches to Individualization

1. **Personalized learning**
   - Implementation of digital platforms for personalized learning that adapt the content and pace of learning to the individual needs of students.
   - Using adaptive tests that adjust to the student's level of knowledge during assessment.
   - Development of personal learning portfolios that track student progress over time and serve as a basis for individualized planning.
2. **Flexible learning models**
   - Introducing a modular teaching system that allows students to progress at their own pace through the teaching units.
   - Implementation of "learning stations" (Lernstationen) where students can choose activities that suit their learning style and interests .

HALLO WIR SIND IDSS

- Organization of "open classes" (offener Unterricht) where students have greater autonomy in choosing topics and learning methods.

3. **Individual mentoring**
   - Assigning a personal mentor to each student who monitors their progress and provides individual support.
   - Regular individual meetings with students to set goals and reflect on progress.
   - Implementation of a peer mentoring system where older students provide support to younger students.

Adaptation of Teaching Methods

1. **Customization of tasks**
   - Development of a bank of tasks with different levels of complexity for each teaching unit.
   - Implementation of a system of "optional tasks" where students can choose between different types of tasks leading to the same learning outcome.
   - Using technology to automatically generate personalized assignments based on past student performance.
   - Implementation of a " scaffolding " approach where students are provided with different levels of support depending on their needs.
2. **Using differentiation**
   - Implementation of the "Parallel teaching" model, where the class is divided into groups working at different levels of complexity.
   - Using "learning stations" with tasks of different difficulty and types (visual, auditory, kinesthetic).
   - Implementation of "flexible grouping" where students are grouped based on current needs and interests rather than fixed abilities.
   - Development of "learning menus" where students can choose between different activities to achieve the same learning outcomes.
3. **Multimodal teaching**
   - Using different media and presentation methods (video, audio, text, hands-on activities) to accommodate different learning styles.
   - Implementation of Universal Design for Learning (UDL) principles that ensure multiple ways of presentation, engagement and expression .

Support for Students with Special Needs

1. **Creating an IEP (Individualized Education Plan)**
   - Formation of multidisciplinary teams for the preparation of IEPs that include teachers, special educators, psychologists and parents.
   - Regular review and adjustment of the IEP based on student progress and new knowledge.
   - Using digital tools to track IEP implementation and share information among all parties involved .
2. **Auxiliary teaching materials**
   - Equipping classrooms with the most modern assistive technology, including screen readers, alternative communication devices and specialized keyboards.
   - Development of a digital library of adapted materials available to all schools in the region.
   - Cooperation with publishers on the development of textbooks in different formats (audio, digital, tactile).

HALLO WIR SIND IDSS

3. **Teaching assistance**
    - Implementation of a training program for teaching assistants that includes the latest methods of supporting students with special needs.
    - Development of a system of rotation of assistants to ensure diversity of support and prevent over-dependence.
    - Using technology to provide virtual assistance when physical presence is not possible.
4. **Inclusive education**
    - Implementation of the "co- teaching " model, where a regular teacher and a special educator lead classes together.
    - Organization of regular sensitization workshops for all students on diversity and inclusion.
    - Adaptation of the school's physical environment for full accessibility to all students.

Mentoring and Support for Students with Exceptional Abilities

1. **Advanced tasks**
    - Development of a bank of advanced tasks and projects in cooperation with universities and research institutes.
    - Implementation of the "acceleration" system where students can take advanced courses in certain subjects.
    - Organization of summer schools and weekend programs for intensive study in specific areas.
2. **Projects for gifted students**
    - Establishing partnerships with local businesses and organizations to work on real projects.
    - Organization of interdisciplinary projects that connect different areas of knowledge.
    - Implementation of the "Student- researcher " program where students work on original research projects under the mentorship of experts.
3. **Mentoring programs**
    - Establishing a network of mentors from different professional fields who are ready to work with gifted students.
    - Organization of online mentoring that allows students to work with experts from all over the world.
    - Implementation of the " Shadowing " program where students spend time with professionals in their field of interest .
4. **Support for socio -emotional development**
    - Organization of support groups for gifted students where they can share experiences and challenges.
    - Implementation of the program for the development of social skills and emotional intelligence.
    - Providing counseling for career guidance and future planning.

This comprehensive approach to individualizing instruction ensures that every student, regardless of their abilities or needs, receives optimal support for their academic, social and emotional development. Through a combination of a personalized approach, flexible learning methods and targeted support, schools in Baden-Württemberg and Thuringia create an inclusive educational environment that fosters excellence and equality.

2.9. The role of parents in the educational process

In the modern education system of Baden-Württemberg and Thuringia , parents are considered key partners in the education of children. Their role is multiple and includes active participation in school life, support for learning at home, and continuous cooperation with the teaching staff. This approach is based on the principle of " Bildungspartnerschaft " (educational partnership) which emphasizes the joint responsibility of school and parents for the educational success of students.

Comprehensive Cooperation with Parents

1. **Regular information**
   - Implementation of a digital system for monitoring student progress (e.g. " Schulmanager Online" or " WebUntis ") that allows parents to have daily insight into their children's grades, attendance and behavior .
   - Organization of monthly "open days" when parents can attend classes and directly observe the educational process.
   - Establishing a system of "weekly reports" sent to parents via email or app, containing a summary of student progress, upcoming assignments and recommendations for support at home.
   - Holding regular video conferences for parents who are unable to physically attend school meetings.
   - Creating personalized student portfolios that are regularly updated and shared with parents, showing not only academic progress, but also socio - emotional development.
2. **Involvement in school activities**
   - Establishment of the "Parent Council" which actively participates in making decisions related to school policy and curriculum .
   - Organization of "Career Days" where parents present their occupations and provide insight into different professional paths.
   - Implementation of the "Parent as teacher" program where parents lead optional modules or workshops in their area of expertise.
   - Establishing a "Parent Volunteer Program" that allows parents to help in various aspects of school life (eg library, school garden, technical support).
   - Organization of cross-cultural events where parents from different cultural backgrounds present their traditions and customs, thus promoting inclusion and understanding.
   - Creation of a "Parent's corner" in the school - a physical space where parents can meet, exchange experiences and organize their own activities.
3. **Learning support at home**
   - Development of an online resource platform for parents, including video tutorials on current teaching methods and learning approaches.
   - Organization of a series of webinars on topics such as " Mindfulness in education", "Digital literacy for parents" or "Supporting children's emotional intelligence".
   - Implementation of the "Family Learning" program where parents and children attend workshops together on learning techniques, time management and the development of critical thinking.
   - Creating a "Parent's Guide" for each class, which explains in detail the expected learning outcomes, key concepts and ways parents can support learning at home.

Buka 13 - 71 000 Sarajevo - Bosna i Hercegovina I tel +387 33 560 520 - mob +387 60 345 1275

info@idss.ba I www.idss.edu.ba

- Establishing a system of "parental ambassadors" where experienced parents mentor new parents on ways to support children in learning.
- Organization of " Mathematics Nights " or "Science Evenings" where parents and children solve tasks and perform experiments together, thus promoting joint learning and interest in STEM fields.

4. **Counseling and support**
   - Establishing a multidisciplinary team to support parents that includes pedagogues, psychologists, social workers and specialists in inclusive education.
   - Organization of monthly "drop-in" sessions where parents can get quick advice and support without an appointment.
   - Implementation of the "Parent to Parent" program that connects parents with similar challenges and enables them to support each other and share experiences.
   - Development of a mobile application that allows parents to anonymously ask questions to the expert team and receive quick answers.
   - Organization of workshops on specific topics such as "Supporting children with ADHD", "How to recognize and support a gifted child" or "Strategies for the prevention of peer violence".
   - Establishing partnerships with local mental health and social service organizations to provide comprehensive support to families.
5. **Parent education**
   - Implementation of the "School for Parents" program, which offers a series of courses on various aspects of parenting and supporting children's education.
   - The organization of "Digital days" where parents are educated about safety on the Internet, the use of educational applications and a critical approach to online information.
   - The development of the " Intercultural Parenting" program, which helps parents from different cultural backgrounds to understand the educational system and expectations in German schools.
   - The establishment of the "Parent Academy" which offers certified courses on topics related to the education and development of children.
6. **Participatory decision-making**
   - Involvement of parents in the process of developing the school curriculum through regular consultations and surveys.
   - Organization of the annual "Forum of the Future" where parents, teachers and students jointly consider the long-term goals and strategies of the school.
   - Implementation of the "participatory budgeting" system where parents have a voice in deciding on the use of part of the school budget for specific projects or initiatives.
7. **Support for parents of students with special needs**
   - Formation of specialized support groups for parents of children with various special needs (eg autism, dyslexia, physical disability).
   - Organization of intensive trainings for parents on specific methods of support and intervention that they can apply at home.
   - Establishing a system of "home visits" where a professional team provides individualized support and advice in the home environment .

This comprehensive approach to involving parents in the educational process ensures that parents are not only informed, but also active partners in their children's education. Through

a combination of regular communication, active participation in school life, targeted support and continuing education, schools in Baden-Württemberg and Thuringia create a strong partnership between school and family, which significantly contributes to the overall success and well-being of students.

2.10. Evaluation and improvement of the curriculum

In the education system of Baden-Württemberg and Thuringia , continuous evaluation and improvement of the curriculum are key components of ensuring the quality of education. This process is designed to be comprehensive, participatory and aimed at continuous improvement , taking into account the latest pedagogical theories, technological innovations and social changes.

Evaluation process

1. **Internal evaluation**

a) **Semester evaluation**

- At the end of each semester, teachers conduct a detailed analysis of the implementation of the curriculum.
- evaluation forms are used that cover various aspects of teaching, including achievement of educational goals, effectiveness of teaching methods, and adequacy of teaching materials.
- Analysis includes quantitative data (eg grade point averages, pass rates) and qualitative data (eg teacher observations, student feedback).

b) **Analysis of student achievements**

- A detailed analysis of student results is conducted, including standardized tests, project papers, and portfolios .
- Advanced statistical tools are used to identify trends and areas that require improvement .
- The results are compared with previous years and with regional and national averages.

c) **Feedback from students and parents**

- A system of anonymous online surveys for students and parents is implemented at the end of each semester.
- organized with a representative sample of students and parents for an in-depth analysis of their experiences and suggestions.
- A "suggestion box" (physical and digital) is established where students and parents can continuously provide feedback.

d) **Peer evaluation**

- Teachers regularly visit their colleagues' classes and provide constructive feedback.
- organized where teachers exchange experiences and discuss challenges in the implementation of the curriculum.

e) **Teacher self-evaluation**

- Teachers keep reflective diaries in which they record their observations about the effectiveness of different teaching methods and materials.
- self-evaluation forms , identifying their own strengths and areas for improvement .

HALLO WIR SIND IDSS

2. **External evaluation**

a) **Cooperation with educational authorities**

- The school actively cooperates with the Ministry of Education of Baden-Württemberg and Thuringia in the process of external evaluation .
- Expert teams from the ministry conduct annual school visits, observing classes and analyzing school documentation.
- The school participates in regional and national projects to evaluate the quality of education.

b) **Independent expert evaluation**

- Independent educational experts are hired to carry out a comprehensive evaluation of the curriculum every third year.
- These experts analyze the compliance of the program with the latest educational trends and the needs of the labor market.

c) **Accreditation and certification**

- The school regularly goes through the process of accreditation by the relevant educational bodies.
- We are actively working on obtaining international quality certificates (eg ISO 21001 for educational organizations).

d) **Benchmarking**

- comparisons are made with other schools in the region and internationally, especially with schools that are recognized as examples of good practice.
- are organized in order to exchange experiences and identify innovative practices.

e) **Evaluation by employers and higher education institutions**

- A system of regular consultations with local employers and universities is being established to assess the relevance of the curriculum for further education and employment .
- The career paths of former students are monitored in order to evaluate the long-term effectiveness of the educational program.

Creation of action plans

1. **evaluation results**
   - A special team is formed to analyze the results of all forms of evaluation .
   - Advanced data analysis techniques, including elements of artificial intelligence, are used to identify key trends and areas for improvement .
2. **Participatory planning**
   - organized for teachers, students and parents where evaluation results are presented and suggestions for improvement are collected.
   - Methods such as "World Café " and "Design Thinking " are used to generate innovative solutions.
3. **Creating SMART goals**
   - For each identified area of improvement , specific, measurable, achievable, relevant and time-bound (SMART) goals are defined.
4. **Defining specific actions**
   - a set of concrete actions is developed with clearly defined responsibilities, resources and time frames.
   - Actions are categorized according to priority and potential impact.
5. **Budgeting and resource allocation**
   - A detailed budget is being developed for the implementation of the action plan.

- of funding are identified , including opportunities to apply for relevant grants.

6. **Implementation and monitoring**
   - monitoring of the implementation of the action plan is being established .
   - organized to monitor progress and resolve potential obstacles.
7. **Evaluation of the action plan**
   - At the end of the school year, a comprehensive evaluation of the implementation of the action plan is carried out.
   - The results of this evaluation are used as input for the development of a new action plan for the next school year.

Continuous professional development

1. **Individual professional development plans**
   - Each teacher develops his annual professional development plan in cooperation with a mentor.
   - The plan is based on the results of self-evaluation and evaluation by students and colleagues.
2. **Internal trainings and workshops**
   - organized where teachers share their expertise with colleagues.
   - A " microlearning " system is being implemented where short educational sessions are organized on a weekly basis.
3. **External trainings and conferences**
   - Teachers are encouraged to participate in relevant conferences and seminars.
   - The school provides a budget to cover the costs of participating in these events.
4. **Online learning**
   - Teachers are provided with access to leading online platforms for professional development (eg Coursera , edX).
   - of micro-credentials is being implemented where teachers receive recognition for completed online courses .
5. **Cooperation with universities**
   - Partnerships are being established with pedagogical faculties for the organization of specialized training for teachers.
   - Teachers are encouraged to participate in research projects in collaboration with university professors.
6. **Mentoring and coaching**
   - A mentoring program is being implemented where experienced teachers provide support to younger colleagues.
   - coaches are engaged who work individually with teachers to improve their skills.
7. **Innovations in teaching**
   - An "Innovation Fund" is being established to support teachers in the implementation of innovative teaching methods and technologies.
   - An annual "Teaching Innovation Festival" is organized where teachers present their innovative practices.
8. **International exchange**
   - The school actively participates in EU teacher exchange programs (eg Erasmus +).
   - Study visits to leading educational institutions in Europe and the world are organized .

This comprehensive approach to curriculum evaluation and improvement ensures that the educational process in the schools of Baden-Württemberg and Thuringia remains dynamic, relevant and aligned with the latest educational standards and practices. Through continuous analysis, reflection and innovation, schools create an environment that supports lifelong learning for both students and teachers, preparing them for the challenges of the 21st century.

2.11. Class schedule

The schedule of classes in the schools of Baden-Württemberg and Thüringen is designed to optimize the learning process, respecting the biorhythm of the students and enabling a comprehensive and balanced educational program. This schedule is aligned with the latest pedagogical research and recommendations from education experts.

Daily schedule of classes

The school day is structured so that it includes morning classes, afternoon activities and an Afternoon Program, giving students the opportunity to spend the whole day in a stimulating educational environment .

1. Morning classes

Preparation for classes

- 7:30 - 7:55: Arrival of students and preparation for classes
  - Students have access to classrooms to prepare materials
  - Teachers are available for short consultations

Regular classes

- First class: 8:00 - 8:45
- Small break: 8:45 - 9:05 (breakfast and recreation)
  - Organized healthy snack in the school canteen
  - Short physical activities to encourage concentration
- Second class: 9:05 - 9:50
- Short break: 9:50 - 9:55 (changing classrooms)
- Third class: 9:55 - 10:40
- Short break: 10:40 - 10:45 (changing classrooms)
- Fourth class: 10:45 - 11:30
- Big break: 11:30 - 12:15 (lunch and recreation)
  - Varied and nutritionally balanced meals in the school canteen
  - Organized recreational activities in the school yard or sports hall
- Fifth class: 12:15 - 13:00
- Short break: 13:00 - 13:05 (change of classrooms)
- Sixth class: 13:05 - 13:50
- Short break: 13:50 - 13:55 (change of classrooms)
- Seventh lesson: 13:55 - 14:40

2. Afternoon activities and Afternoon Program

Transitional period

- 14:40 - 15:15: Big break and snack
  - A healthy snack in the school canteen
  - Free time for rest and socialization

Structured activities

HALLO WIR SIND IDSS

- First block: 15:15 - 16:00 (additional educational activities)
  - Help with homework
  - Supplementary teaching for students who need additional support
  - Additional classes for gifted students
- Second block: 16:00 - 17:00 (extracurricular activities and work on projects)
  - Sports activities (e.g. football, basketball, gymnastics)
  - Art workshops (eg painting, music, drama)
  - STEM projects (eg robotics, programming)
  - Language workshops
  - Ecological projects

End of the day

Stundenplan 1. Klasse IDSS Schuljahr 2024/2025					
Zeit	**Montag**	**Dienstag**	**Mittwoch**	**Donnerstag**	**Freitag**

* Dieser Stundenplan gilt ab dem 24.08.2024					

Example of a lesson schedule

Adjusting the schedule according to age

The schedule is adapted to the different ages of students, taking into account their specific needs and learning capacities:

1. **Lower grades of elementary school (grades 1-4)**
   - Focus on basic skills (reading, writing, math) in the morning hours
   - Shorter lessons (40 minutes) with more frequent breaks
   - More time for play and creative activities in the afternoon

2. **Higher grades of elementary school (grades 5-6)**
    - Gradual introduction of longer classes (45 minutes)
    - Greater emphasis on independent study and project work
    - Introduction of optional subjects in the afternoon
3. **Junior high school grades (grades 7-9/10)**
    - Full lessons of 45 minutes
    - Introduction of advanced subjects and specialization
    - Greater focus on preparation for future education or career
4. **Upper secondary school grades (10/11-12/13 grade)**
    - A more flexible schedule with block classes for certain subjects
    - More independent work and research projects
    - Intensive preparation for final exams and admission to college

Structure of Afternoon Program

Aim and purpose
The Afternoon Program at the Internationale Deutsche Schule Sarajevo is designed according to the standards of the Afternoon Program in primary and secondary schools in Baden-Württemberg and Thuringia , Germany. The program aims to provide students with an organized, safe and stimulating environment after regular classes, with activities that encourage the overall development of children.

Structure and organization:
The Afternoon Program lasts every working day from 14:40 to 17:00, divided into three periods:

- **Snack Time: 14:40 – 15:15**
  Students have a snack break, where the goal is to encourage healthy eating habits and socialize in a relaxed atmosphere.

- **First term: 15:15 – 16:00**
  Organized activities according to sections that change daily.

- **Second term: 16:00 – 17:00**
  Additional activities and free play, depending on the student's plan and needs.

Syllabus and sections

Natur (Nature)
Activities in nature and outdoors include environmental workshops, botanical walks, exploring local flora and fauna, and environmental projects such as making small gardens. The goal is to develop awareness of the importance of nature, environmental protection and connect children with the natural environment .

Freies Spiel (Free Play)
Free play enables children to develop social skills, creativity and independence through free exploration and play with peers. Students choose activities according to their interests , which may include board games, LEGO construction, drawing and other creative activities.

Handarbeit / Spiel (Handwork/Play)
The section is dedicated to the development of fine motor skills and creativity through activities such as making handicrafts, clay modeling, sewing, knitting and other craft techniques. Participation in dramatic games and improvisations is also encouraged in order to develop creativity and expression .

Sport (Sporting activities)
This segment includes various indoor or outdoor sports activities such as futsal, basketball, gymnastics and athletic exercises. The goal is to improve physical fitness, team spirit, and promote a healthy lifestyle.

Additional Sections and Activities

Creative Writing and Reading
Activities aimed at developing language skills through reading stories, journaling, writing poems and creative texts. The goal is to develop imagination, enrich vocabulary and encourage love for writing and reading.

Music and Dance
Activities include singing, playing instruments, learning basic dance steps and rhythmic games. Expression through music is encouraged , as is the development of a sense of rhythm and teamwork.

STEM Workshops
Interactive workshops that include simple science experiments, robotics, coding and logic games. The goal is to improve logical thinking, teamwork, and encourage interest in science and technology.

Cooking Workshops
Practical activities in which children learn basic cooking skills, prepare healthy meals and learn about different culinary cultures. These activities promote responsible behavior towards food and develop self-confidence through practical work.

Innovative layout elements

1. **Flexible modules**
   - Once a week, students have the opportunity to choose between different educational modules according to their interests and needs.
2. **Interdisciplinary project days**
   - Once a month, regular classes are replaced by full-day interdisciplinary projects that connect different subjects.
3. **Digital learning**
   - Periods for online learning and working on digital platforms are integrated into the schedule, preparing students for the digital age.
4. **Mindfulness and mental health**
   - Short sessions of mindfulness and mental health exercises are integrated into the daily schedule.

HALLO WIR SIND IDSS

5. **External teaching**
    - Classes in nature, visits to museums and other educational institutions are regularly organized .

Schedule personalization

Schools in Baden-Württemberg and Thüringen use advanced software systems that allow the personalization of schedules according to the individual needs of students:

1. **Adaptive learning**
    - The system tracks student progress and adjusts the schedule to focus on areas that need extra attention.
2. **Choice of elective subjects**
    - Students have the option of choosing electives that fit into their personalized schedule.
3. **Load balancing**
    - The system ensures that students have a balanced schedule, avoiding overload on certain days.

Evaluation and adjustment of schedules

1. **Regular efficiency analysis**
    - At the end of each semester, a schedule effectiveness analysis is conducted, taking into account academic results, student and teacher feedback, and the latest research on learning effectiveness.
2. **Flexible customization**
    - The schedule can be adjusted during the school year if the need arises, ensuring optimal support for student learning and development.
3. **Inclusivity**
    - Special attention is paid to adapting the timetable to students with special needs, ensuring that they have the necessary support and resources.

This comprehensive approach to the timetable in the schools of Baden-Württemberg and Thuringia ensures that the educational process is efficient, stimulating and adapted to the individual needs of the students. Through careful planning and continuous evaluation , schools create an optimal environment for learning and development, preparing students for the challenges of the 21st century.

3. Planning and organization

3.1. Semester plans

In accordance with the most modern educational practices and standards applied in primary and secondary schools in Baden-Württemberg and Thuringia , Germany, semester plans represent a key element in the organization of teaching. These plans are designed to ensure a comprehensive, structured and flexible approach to education, tailored to the needs of the 21st century learner.

Objectives and contents

Elaboration of objectives

Specific goals

1. **First semester**

The goals of the first semester are set according to the SMART principle (Specific, Measurable, Attainable, Relevant and Time-bound), focusing on building a solid foundation of knowledge and skills. Examples for different subjects include:

a) **Mathematics:**

- Students will master basic arithmetic operations (addition, subtraction, multiplication , division) with 90% accuracy on standardized tests.
- Develop the ability to solve simple mathematical problems by applying learned operations in everyday situations.
- Adopt the concept of fractions and decimal numbers, demonstrating understanding through practical exercises.

b) **Reading and Writing:**

- Students will develop reading fluency, reaching a speed of 60-80 words per minute for their age.
- Demonstrate comprehension of a read text through the ability to summarize main ideas and answer questions about the content.
- Write short compositions (100-150 words) with a clear structure of introduction, elaboration and conclusion.

c) **Natural sciences:**

- Students will understand the basic concepts of the life cycle of plants and animals, demonstrating knowledge through making models and diagrams.
- Conduct simple scientific experiments, formulating hypotheses and recording results.

d) **Digital competences:**

- Students will master the basics of using a computer, including opening and closing programs, creating and saving documents.
- Learn to browse the Internet safely and critically evaluate online sources of information.

2. **Second semester**

The objectives of the second semester build on the achievements of the first semester, focusing on more advanced skills and application of knowledge:

a) **Mathematics:**

- Students will understand and apply basic geometric concepts, including identifying and measuring angles, areas, and perimeters of simple geometric shapes.
- Develop skills in solving more complex mathematical problems that require a combination of multiple operations.
- An introduction to basic algebraic concepts, including solving simple equations.

b) **Reading and Writing:**

- Students will analyze more complex texts, identifying themes, characters and plots in literary works.
- Write structured essays (200-250 words) with clear arguments and using evidence from the text.
- Develop critical thinking skills through discussions about the texts read.

c) **Natural sciences:**

- Students will understand the basic concepts of ecology and biodiversity , demonstrating knowledge through the creation of ecosystem projects.
- Conduct more complex scientific experiments, formulating hypotheses, controlling variables and analyzing results.

HALLO WIR SIND IDSS

d) **Digital competences:**

- Students will create multimedia presentations combining text, images and video.
- Learn the basics of programming through visual programming languages like Scratch .

Setting priorities

1. **First semester:**
   - Priority is placed on the development of basic reading, writing and arithmetic skills.
   - Focus on building work habits and independent learning skills.
   - Development of social skills and teamwork through group projects.
2. **Second semester:**
   - Priority is given to the application of learned skills in more complex situations.
   - Focus on developing critical thinking and problem solving.
   - Encouraging creativity and innovation through interdisciplinary projects.

Contents

Lesson planning

1. **First semester:**

Detailed lesson planning includes a schedule of thematic units, lessons and activities. Examples for different subjects:

a) **Biologie (Biology)**:

- Week 1-3: Basic characteristics of living organisms
- Week 4-6: Cell structure and function
- Week 7-9: Classification of plants and animals
- Week 10-12: Ecosystems and the role of organisms in them
- Practical activities: Microscopy of cells, growing plants, observation of local ecosystems

b) **Geschichte (History)**:

- Week 1-4: Introduction to history and historical methods
- Week 5-8: Ancient civilizations (Egypt, Mesopotamia)
- Week 9-12: Ancient Greece and Rome
- Practical activities: Creation of a timeline, simulations of historical events, analysis of primary sources

2. **Second semester:**

Elaboration of more advanced topics and application of knowledge:

a) **Biologie (Biology)**:

- Week 1-3: Ecology and environmental protection
- Week 4-6: Biodiversity and endangered species
- Week 7-9: Human body and health
- Week 10-12: Genetics and evolution
- Practical activities: Field research biodiversity , environmental conservation projects , experiments on human physiology

b) **Geschichte (History)**:

- Week 1-4: The Middle Ages in Europe
- Week 5-8: The Renaissance and the Age of Discovery
- Week 9-12: The Industrial Revolution and the Modern Age
- Practical activities: Research projects on local history, debates on historical events, creation of digital historical maps

HALLO WIR SIND IDSS

Evaluation

Planning evaluation methods includes a variety of approaches that enable a comprehensive assessment of student progress:

1. **Continuous evaluation:**
   - Weekly quizzes and short tests to check understanding of key concepts
   - Grading homework and projects
   - Monitoring participation in classes and group activities
2. **Mid-semester evaluations:**
   - Standardized tests covering the contents of the first part of the semester
   - Presentations of individual or group projects
   - Practical tasks to assess the application of knowledge (e.g. laboratory experiments in natural sciences)
3. **Final evaluations:**
   - Comprehensive tests that cover the entire material of the semester
   - A portfolio of work that demonstrates student progress over the course of the semester
   - Final projects that integrate knowledge from different fields
4. **Alternative evaluation methods:**
   - self-evaluation through reflective diaries
   - Peer evaluation for group projects
   - Evaluation through digital tools and online platforms

Adapting teaching

Setting up procedures for continuous improvement of the teaching process:

1. **Identification of student needs:**
   - Regularly performing diagnostic tests to identify areas that require additional attention
   - Individual conversations with students and parents for a better understanding of specific challenges
2. **Differentiation of teaching:**
   - Preparation of materials and tasks of different levels of complexity to adapt to different abilities of students
   - Using technology to personalize learning (e.g. adaptive exercise software)
3. **Additional support:**
   - Organizing supplementary classes for students who have difficulties
   - Mentoring programs where older students help younger ones
4. **Enrichment of programs for gifted students:**
   - Offering additional challenging projects and assignments
   - The possibility of accelerated progress through the material
5. **Flexible grouping:**
   - Forming smaller groups of students with similar abilities for targeted teaching
   - Rotation of groups to encourage cooperation and exchange of knowledge among students of different abilities
6. **Continuous professional development of teachers:**
   - Regular workshops and seminars on the latest pedagogical methods
   - Exchange of experiences and best practices among teachers
7. **Feedback integration:**
   - Regular collection of feedback from students and parents
   - evaluation results to identify areas that require adaptation in the curriculum

HALLO WIR SIND IDSS

8. **Interdisciplinary approach:**
    - Development of projects that connect content from different subjects
    - Cooperation of teachers of different subjects in planning and teaching

This detailed approach to semester planning ensures that the educational process in the schools of Baden-Württemberg and Thuringia is comprehensive, flexible and focused on the individual needs of the students. Through careful goal setting, content planning, diverse evaluation methods and continuous adaptation, a dynamic and stimulating educational environment is created that prepares students for the challenges of the modern world.

3.2. Project works

In accordance with the most modern educational practices and educational standards applied in primary and secondary schools in Baden-Württemberg and Thuringia , Germany, project works represent a key element of modern education. They encourage active learning, critical thinking and the development of practical skills, preparing students for the challenges of the 21st century.

Thematic projects

Planning and organization

1. **Choice of topics**

Choosing topics for project work is a crucial step that requires careful consideration and planning. The topics should be relevant, challenging and adapted to the age of the students, while encouraging interdisciplinary learning and the development of key competencies.

a) **Interdisciplinary projects:**

- **Sustainable development:** This comprehensive project integrates knowledge from biology (ecosystems and biodiversity), geography (natural resources and climate change), social sciences (impact on communities and economy) and mathematics (statistical analysis of climate change data).
- **Activities:** Students explore local ecosystems, analyze resource consumption in their community, study global climate trends and propose sustainable solutions.
- **Learning outcomes:** Understanding the complexity of sustainable development, developing critical thinking and problem solving skills.

b) **Cultural diversity and global citizenship:**

- **Description:** A project that includes history (migrations and cultural exchanges), geography (demography and globalization), languages (linguistic diversity) and art (cultural expression).
- **Activities:** Students research their family origins, interview community members with different cultural backgrounds, analyze global migration trends, and organize a multicultural festival.
- **Learning outcomes:** Development of intercultural competence, empathy and global understanding.

c) **Digital literacy and ethics:**

- **Description:** A project that combines informatics (programming and internet security), ethics (digital citizenship), media literacy and social sciences (the impact of technology on society).

- **Activities:** Students develop an app to promote digital safety, analyze the impact of social media on mental health, and create a campaign to raise awareness about digital ethics.
- **Learning outcomes:** Improvement of digital literacy, development of critical thinking about technology and ethical use of digital tools.

2. **Structure of projects**

The structure of the projects should be clearly defined, with precisely defined phases that enable the gradual development of knowledge and skills.

a) **Phases of projects:**

and. **Research paper** (3-4 weeks):

- Students form research questions and hypotheses.
- Conduct research using a variety of sources: books, scientific articles, internet resources, interviews with experts.
- Organize and analyze the collected information.
- **Example:** In a project on sustainable development, students explore local ecosystems, analyze climate change data, and study examples of sustainable practices from around the world.

ii. **Field work** (1-2 weeks):

- Students conduct practical research outside the classroom.
- Collect data, conduct surveys or experiments.
- **Example:** Visiting a local recycling center, measuring water quality in a nearby river or interviewing local farmers about sustainable practices.

iii. **Analysis and synthesis** (2-3 weeks):

- Processing and interpretation of collected data.
- Formulation of conclusions and recommendations.
- **Example:** Analysis of survey results on recycling habits in the local community, creation of graphs showing trends in energy consumption.

iv. **Creation of presentations and reports** (2 weeks):

- Preparation of visual presentations (posters, PowerPoint presentations, video materials).
- Writing reports or essays summarizing findings and conclusions.
- **Example:** Creating an infographic on the impact of climate change on the local ecosystem, writing a policy brief with recommendations for local authorities on improving sustainability .

c. **Presentation of results** (1 week):

- Presentation of the project in front of the class, school or wider community.
- Organization of a mini-conference or project fair.
- **Example:** Presentation of research results at the school eco-fair, where students demonstrate their projects and share knowledge with peers and community members.

Group work and individual tasks

A balance between group and individual work is key to developing both collaborative and independent learning skills.

a) **Organization of group work:**

- Forming groups of 3-5 students with different skills and interests .
- Assignment of specific roles within the group (team leader, researcher , presenter , recorder).
- Regular group meetings for discussion and exchange of ideas.
- Using online collaboration platforms (eg Google Docs , Trello) to coordinate work.

b) **Individual tasks:**

- Writing reflective journals about project progress and personal contribution.
- Creation of individual research essays on specific subtopics of the project.
- Creation of personal portfolios that document the process of learning and developing skills.

c) **Integration of group and individual work:**

- Peer organization review session where students give feedback on the individual works of their colleagues.
- Role rotation within the group so that each student experiences different aspects of project work.
- Individual presentations within the group before the final group presentation.

Presentation and evaluation

presentation and evaluation should be comprehensive, transparent and formative, providing students with valuable feedback and opportunities for self-reflection.

a) **Presentation methods:**

- Formal presentations in front of the class or school.
- Interactive posters and demonstrations at school fairs.
- Digital presentations (websites, video materials, podcasts).
- Public presentations for parents and community members.

b) **Evaluation methods:**

and. **Peer review** (20% of the total grade):
- Students evaluate the works of their peers using pre-defined rubrics.
- Organization of sessions for giving constructive feedback.
- **Example:** Students evaluate presentation skills, quality research and creativity in the approach of their colleagues.

ii. **Self-evaluation** (20% of the total grade):
- Students fill out detailed self-evaluation forms.
- They write reflective essays about their participation, challenges and lessons learned.
- **Example:** Students evaluate their contribution to group work, identify areas for improvement and set goals for future projects.

iii. **Teacher's grade** (40% of total grade):
- Comprehensive evaluation that includes quality research , presentation skills, teamwork and individual contribution.
- Using detailed rubrics to evaluate different aspects of the project.
- **Example:** The teacher evaluates the depth of research , critical thinking, creativity in solving problems and the quality of the final presentation.

iv. **Process evaluation** (20% of the total grade):
- Continuous monitoring of project progress through regular check -in sessions.
- Evaluation of work diaries and portfolios documenting the work process.
- **Example:** The teacher monitors and evaluates how students manage time, resolve conflicts in the team and adapt to challenges during the project.

c) **Feedback and reflection:**

- Organization of sessions to provide detailed feedback after the completion of the project.
- Led discussions on lessons learned and areas for improvement .
- Creation of individual action plans for future development based on the received feedback.

d) **Recognition and celebration of success:**

- Organization of the school exhibition of the best projects.

HALLO WIR SIND IDSS

- Awards for outstanding achievements in different categories (best research , most innovative solution, best presentation).
- Publication of project results on the school website or in local media.

This comprehensive approach to project work in schools in Baden-Württemberg and Thuringia ensures that students develop not only academic knowledge, but also key 21st century skills such as critical thinking, creativity, communication and collaboration. Through carefully planned and structured projects, students prepare for active citizenship and future professional challenges, while developing a deeper understanding of complex social and global issues.

3.3. Excursions and extracurricular activities

3.3.1. Educational and fun trips

Field trips and extracurricular activities are a key element of modern education, providing students with the opportunity to expand their knowledge outside the classroom, develop social skills and gain practical experience. In accordance with the educational standards of Baden-Württemberg and Thuringia, these activities are carefully planned to ensure that they contribute to the overall development of the student.

a) Planning trips

1. **Choice of destinations:**
   - **Educational destinations:**
     - Museums: National Museum of Bosnia and Herzegovina in Sarajevo, which offers a rich collection of archaeological, ethnological and natural history exhibits.
     - Science centers: Center for Ecology and Natural Resources - Academician Sulejman Redžić (CEPRES) in Sarajevo, where students can learn about biodiversity and ecology.
   - **Historical sites:**
     - The old town of Jajce, including a waterfall and catacombs, to learn about medieval Bosnian history.
     - The Old Bridge in Mostar, a UNESCO World Heritage Site, for lessons on architecture and cultural heritage.
   - **Natural destinations:**
     - Una National Park, for the study of ecosystems and biodiversity .
     - Mountain Bjelašnica, for geological studies and the study of alpine flora and fauna.
2. **Organization and logistics:**
   - **Transportation:**
     - Choosing a safe and reliable carrier with experience in organizing student excursions.
     - Ensuring that vehicles meet all safety standards prescribed by law.
   - **Accommodation (for multi-day trips):**
     - Reservation of accommodation in facilities suitable for school groups, with adequate space for educational activities.
   - **Meals:**
     - Planning nutritionally balanced meals, taking into account the special dietary needs of students.
   - **Security:**

HALLO WIR SIND IDSS

        - Development of a detailed security plan, including emergency procedures.
        - Ensuring an adequate number of teachers and chaperones in accordance with regulations.
3. **Educational activities:**
    - **Preparation before the trip:**
        - Organizing lectures and workshops that will prepare students for the topics they will explore during the trip.
    - **Activities during the trip:**
        - Hiring expert guides, e.g. a curator in the National Museum of Bosnia and Herzegovina or a biologist in the Una National Park.
        - Organizing interactive workshops, e.g. an archaeological workshop in Jajce or a workshop on biodiversity in CEPRES.
    - **Project tasks:**
        - Assignment of research projects that students should realize during the trip, such as documenting the flora and fauna in the Una National Park.
4. **Integration into the curriculum:**
    - Linking the content of the excursion with teaching units from different subjects (history, geography, biology, art).
    - Development of interdisciplinary projects that build on the experiences gained during the field trip.

b) Monitoring and evaluation

1. **Performance monitoring:**
    - **Gathering Feedback:**
        - Development of standardized questionnaires for students, teachers and parents to assess various aspects of field trips.
        - Organizing group discussions after the trip for in-depth analysis of experiences.
    - **Assessment of educational outcomes:**
        - Administering short tests before and after field trips to measure progress in knowledge.
        - Analysis of the quality of student projects and presentations related to the field trip.
2. **Evaluation uses:**
    - **Analysis of educational goals:**
        - Assessment of the extent to which the trip contributed to the achievement of the planned educational goals.
        - Identification of unexpected educational benefits resulting from field trips.
    - **Assessment of skill development:**
        - Evaluation of progress in the development of students' social, communication and research skills.
    - **Analysis of organizational aspects:**
        - Review the logistical elements of the trip to identify areas for improvement .
3. **Continuous improvement:**
    - Regular updating of trip plans based on collected feedback and evaluations.
    - Exchange of best practices with other schools and educational institutions.

HALLO WIR SIND IDSS

3.3.2. Extracurricular activities

Extracurricular activities are crucial for the holistic development of students and are in line with the educational goals of Baden-Württemberg and Thuringia which emphasize the importance of developing personality and social competences.

1. **Types of extracurricular activities:**
   - **Sports activities:** Formation of school teams in traditional Bosnian sports such as sitting volleyball.
   - **Art activities:** Organizing sections for traditional Bosnian crafts such as kujundžiluk or pottery.
   - **Volunteering activities:** Establishing a volunteering program in the local community, e.g. helping the elderly or cleaning up the environment.
   - **Science Clubs:** Starting STEM clubs that deal with local environmental issues or renewable energy innovation.
2. **Planning and implementation:**
   - Alignment of activities with student interests and school resources.
   - Ensuring inclusivity - creating opportunities for the participation of all students, including those with special needs.
   - Engagement of experts from the community as mentors for specific activities.
3. **Evaluation and improvement:**
   - Regular collection of feedback from students, parents and teachers.
   - Assessment of the impact of extracurricular activities on academic success and personal development of students.
   - Continuous adaptation of the offer of activities according to the needs and interests of students.

This expanded access to field trips and extracurricular activities ensures that students receive a rich, varied and educational experience that complements their formal education. By integrating local Bosnian destinations and activities, students develop a deeper understanding and respect for their cultural and natural heritage, while acquiring skills and knowledge in accordance with the most modern educational standards.

4. Elective courses

In line with the latest educational trends and standards in Baden-Württemberg and Thuringia , electives play a key role in providing a comprehensive and personalized educational experience. These subjects allow students to explore their interests , develop specific skills and prepare for future careers or further education.

4.1. Technical work

Technical work, as an optional subject, aims to develop technical competences, creativity and innovation in students. This course is aligned with German educational standards that emphasize the importance of STEM (Science, Technology, Engineering and Mathematics) education.

HALLO WIR SIND IDSS

Planning and description of technical skills:

1. **Learning objectives:**

a) **Basic skills:**

- **Introduction to the technique:**
  - Introducing students to basic technical concepts and principles.
  - Developing an understanding of the role of technology in everyday life and society.
  - Encouraging critical thinking about technological solutions and their impact on the environment.
- **Working with tools and materials:**
  - Training for the safe and proper use of hand and power tools.
  - Getting to know different materials (wood, metal, plastic) and their properties.
  - Developing fine motor skills through practical tasks.
- **Basic principles of engineering:**
  - Learning about mechanical principles such as force, moment and equilibrium.
  - Understanding of basic electrical concepts (current, voltage, resistance).
  - Introduction to thermodynamics and its application in everyday life.
- **Design and production:**
  - Developing sketching and technical drawing skills.
  - Learning about the design process, from idea to realization.
  - Creation of simple objects and mechanisms.

b) **Advanced skills:**

- **CAD (Computer- Aided Design):**
  - Training in the use of CAD software such as AutoCAD or SolidWorks .
  - Developing 3D modeling and visualization skills.
  - Preparation of technical documentation and drafts.
- **Electronics and Programming:**
  - Work with electronic components and assemblies.
  - microcontroller programming (eg Arduino).
  - Development of simple robotic systems.
- **Advanced Manufacturing:**
  - Getting to know CNC technology and 3D printing .
  - Basics of automation and industrial processes.
  - Application of principles of sustainable production and circular economy.

2. **Course content:**

a) **Basic units:**

- **Materials and processing:**
  - Detailed study of the properties and applications of various materials.
  - Material processing techniques (cutting, drilling, grinding, welding).
  - Connection and assembly methods.
- **Construction and mechanics:**
  - Making simple mechanical systems (lever, gears, pulleys).
  - Design and construction of stable structures.
  - Basics of statics and dynamics.
- **Electrotechnical projects:**
  - Making basic electrical circuits.
  - Work with electronic components (resistors, capacitors, transistors).
  - Design and manufacture of simple electronic devices.

HALLO WIR SIND IDSS

b) **Project activities:**

- **Models and prototypes:**
  - Design and production of functional models of machines or devices.
  - Development of prototypes to solve everyday problems.
  - Creation of interactive exhibits for school science fairs.
- **Sustainable projects:**
  - Design and implementation of energy saving system in school.
  - Production of devices for water or air purification.
  - Development of recycling or composting systems .
- **Interdisciplinary projects:**
  - Cooperation with other subjects (eg biology - creation of ecosystem models).
  - Development of educational games or applications for younger students.
  - Creating art installations that combine technology and art.

3. **Work methods and evaluation:**

a) **Work methods:**

- **Theoretical lectures:**
  - Interactive lectures with the use of multimedia content.
  - Guest lectures by industry experts.
  - Virtual tours of production facilities and research centers.
- **Practical workshops:**
  - Work in small groups on specific technical tasks.
  - Rotation of students through different workstations to acquire a variety of skills.
  - Organization of " hackathons " or competitions in solving technical challenges.
- **Project tasks:**
  - Long-term individual or group projects.
  - Mentoring by teachers and industry experts.
  - Project presentations to the school community and local partners.

b) **Evaluation:**

- **Practical projects:**
  - Evaluation of final products according to pre-defined criteria.
  - Evaluation of work processes and project documentation.
  - Peer review and self-evaluation of students.
- **Knowledge tests:**
  - A combination of written tests and practical tasks.
  - Online quizzes and interactive knowledge tests.
  - Preparation of technical reports and documentation.
- **Continuous monitoring:**
  - portfolio showing progress over the year.
  - Regular consultation and feedback.
  - Evaluation of participation in group projects and discussions.

This detailed curriculum of technical work as an elective is aligned with the latest educational standards in Baden-Württemberg and Thuringia , with an emphasis on practical experience, an interdisciplinary approach and the development of skills relevant

HALLO WIR SIND IDSS

to the 21st century. The plan allows students to gain a solid foundation in technical disciplines while encouraging creativity, innovation and critical thinking.

4.2. Computer skills

Teaching the basics and advanced skills in the field of information technology:

1. **Basic skills:**
    - **Basic computer skills:**
        - **Using a computer:**
        - Acquaintance of students with different operating systems (Windows, macOS , Linux) and their specificities.
        - Detailed explanation of folder and file structure, including creating, copying, moving and deleting.
        - Training in the use of Microsoft Office Suite (Word, Excel, PowerPoint) with a focus on practical application in academic and professional contexts.
        - Introduction to the cloud computing and using online tools for collaboration (eg Google Workspace).
        - **Internet and Security:**
        - A detailed explanation of how the Internet works, including concepts such as IP addresses, domains, and browsers.
        - Internet Safety Training:
            - Creating strong passwords and managing your digital identity.
            - Identifying phishing attacks and other online threats.
            - Understanding the importance of software updates and antivirus protection.
        - Ethics in the digital environment:
            - Discussions on cyber violence, its consequences and prevention.
            - Thinking critically about online content and identifying fake news.
            - Understanding copyright in the digital space.
    - **Advanced Skills:**
        - **Programming:**
        - **Python:**
            - Introduction to syntax and basic concepts (variables, loops, conditions).
            - Working with functions and modules.
            - Basics of object-oriented programming.
            - Development of simple applications with a graphical user interface.
        - **JavaScript:**
            - Basics of front- end web development.
            - DOM manipulation and event handling .
            - Asynchronous programming and AJAX.
        - **Scratch:**
            - Creating interactive stories and games.
            - An introduction to programming concepts through a visual interface.

HALLO WIR SIND IDSS

- **Multimedia skills:**
- **Graphic design:**
  - Work with vector and raster graphics (Adobe Illustrator , Photoshop).
  - Design principles: color, typography, composition.
  - Creation of infographics and data visualization.
- **Video production:**
  - Basics of shooting and framing .
  - Video editing using professional tools (Adobe Premiere Pro , DaVinci Resolve).
  - Adding effects and subtitles.
- **Audio production:**
  - Sound recording and processing.
  - Basics of mixing and mastering .
  - Creating podcasts and radio shows.
- **Information technologies:**
- **Databases:**
  - Introduction to relational databases.
  - Working with SQL to create, read, update and delete data.
  - Design and normalization of databases.
- **Network technologies:**
  - Understanding of OSI model and TCP/IP protocol.
  - Configuration of basic network devices.
  - Basics of network security and firewalls .
- **Cloud computing:**
  - Getting to know different models of cloud services (IaaS , PaaS , SaaS).
  - Practical work with cloud platforms (eg AWS, Azure).
  -

2. **Work methods and evaluation:**
   - **Working methods:**
     - **Lectures and workshops:**
     - Interactive lectures with real-time demonstrations.
     - Practical workshops where students immediately apply what they have learned.
     - Guest lectures by industry experts.
     - **Work on projects:**
     - Long-term projects that simulate real scenarios from the industry.
     - Team projects that encourage collaboration and communication.
     - Project presentations in front of the class and potential "clients".
     - **Flipped Classroom:**
     - Students prepare for classes by watching video material at home.
     - Classroom time is used for discussions and practical work.
     - **Gamification:**
     - Using game elements in teaching to increase student engagement.
     - Organizing hackathons and programming competitions.
   - **Evaluation:**
     - **Projects:**
     - Evaluating the entire development process, not just the final product.
     - Peer review where students evaluate each other's work.

- Project presentations to a panel of teachers and industry experts.
- **Tests and assignments:**
- A combination of theoretical tests and practical tasks.
- Online quizzes for self-assessment of knowledge.
- Tasks that simulate real problems from industry.
- **Practical exercises:**
- Continuous monitoring of progress through laboratory exercises.
- Portfolio of works that students create during schooling.
- Practical exams where students demonstrate their skills in a controlled environment .
- **Soft skills evaluation:**
- Assessment of teamwork and communication skills.
- Evaluation of the ability to present and explain technical concepts.

This expanded curriculum ensures that students acquire not only technical skills, but also critical thinking, creativity and problem-solving skills, which are key competencies for success in the digital age. It is aligned with the latest trends in the IT industry and the educational standards of Baden-Württemberg and Thuringia , preparing students for further education and future careers in the technology sector.

4.3. Foreign languages

Teaching foreign languages:

1. **Languages offered:**
   - **Required languages:**
     - **German:** As the official language of the provinces, the teaching of the German language is compulsory for all students.
     - **English:** As the first foreign language, English is introduced from the first grade of primary school.
   - **Optional languages:**
     - **French:** As a second foreign language, it is usually introduced from the fifth grade.
     - **Other languages:** Depending on the school's capacity and student interests , other languages such as Spanish, Italian, Russian or Turkish may be offered.
2. **Learning objectives:**
   - **Development of language competences:**
     - **Listening:** Understanding spoken language in different contexts.
     - **Speech:** Ability to communicate clearly and fluently in different situations.
     - **Reading:** Comprehension of written texts of different genres and complexity.
     - **Writing:** Ability to express oneself in writing in a variety of formats and styles.
   - **Intercultural competence:**
     - Developing awareness of cultural differences and similarities.
     - Encouraging openness and respect for other cultures.
   - **Learning strategies:**
     - Developing effective techniques for independent language learning.
     - Encouraging critical thinking and analysis of language structures.

3. **Working methods:**
   - **Communicative approach:**
     - Focus on practical use of language in real life situations.
     - Use of authentic materials such as newspapers, films and songs.
   - **Project teaching:**
     - Working on long-term projects that integrate different language skills.
     - Encouraging teamwork and creativity.
   - **Digital Learning:**
     - Using educational applications and online platforms for interactive learning.
     - Virtual exchanges with students from other countries.
   - **Immersive Learning:**
     - Organizing "language days" where other subjects are taught in a foreign language.
     - Encouraging students to use a foreign language outside the classroom.
4. **Evaluation and assessment:**
   - **Continuous monitoring:**
     - Regular monitoring of student progress through portfolios and learning diaries.
     - self-evaluation and peer assessment.
   - **Formative assessment:**
     - Regular feedback on progress and areas for improvement .
     - Using rubrics to assess different language skills.
   - **Summative assessment:**
     - Standardized tests aligned with the Common European Framework of Reference for Languages (ZEROJ).
     - Projects and presentations that demonstrate integrated language skills.
5. **Additional activities:**
   - **Language camps:** Organizing summer or winter camps for intensive language learning.
   - **International exchanges:** Encouraging student exchanges with partner schools in target language countries.
   - **Language competitions:** Participation in regional and national competitions in foreign languages.
   - **Cultural events:** Organizing cultural days, film evenings or literary clubs in a foreign language.
6. **Student support:**
   - **Differentiated teaching:** Adapting teaching to different levels of knowledge and learning styles.
   - **Supplementary teaching:** Additional support for students who have difficulties in mastering the material.
   - **Advanced programs:** Additional challenges for gifted students, including preparation for international language certificates.
7. **Professional development of teachers:**
   - Regular professional training of teachers in accordance with the latest methods of teaching foreign languages.
   - Encouraging teachers to share experiences and best practices with colleagues from other schools and countries.

HALLO WIR SIND IDSS

This expanded approach to foreign language teaching is in line with the most up-to-date educational practices and standards applied in Baden-Württemberg and Thuringia . The aim is to ensure that students not only master the language at a technical level, but also develop a deep understanding and respect for the cultures associated with those languages, thus preparing them for successful participation in the global society and labor market.

5. Planning and organization

5.1. Semester plans

Objectives and contents for each semester (examples):

1. **Elaboration of objectives:**
   - **First semester:**
     - **Mathematics:**
     - Introduction to basic arithmetic operations (addition, subtraction, multiplication , division) with natural numbers up to 1000.
     - Familiarity with basic geometric figures (square, rectangle , triangle , circle) and their properties.
     - Solving simple problems from everyday life using basic mathematical operations.
     - Developing logical thinking through simple mathematical games and puzzles.
     - **German language:**
     - Learning basic grammar rules (nouns, verbs, adjectives, personal pronouns).
     - Vocabulary expansion with a focus on everyday topics (family, school, hobbies).
     - Development of reading and writing skills through working with short texts and writing simple compositions.
     - Practicing pronunciation and intonation through songs and recitations.
     - **Competence development:**
     - Introduction to research skills through simple projects (eg local community research).
     - Developing critical thinking through age-appropriate discussions of current topics.
     - Improving the ability to express opinions in writing and speaking through presentations and debates.
   - **Second semester:**
     - **Mathematics:**
     - Building on previously learned material with a focus on more complex problems.
     - Working with decimal numbers and introducing the concepts of percentages.
     - Introduction to basic algebraic concepts (simple equations with one unknown).
     - Expanding knowledge of geometry (volume and area of simple figures).
     - **German language:**

HALLO WIR SIND IDSS

- Developing the ability to conduct more complex conversations on topics from everyday life.
- Reading and understanding more complex texts, including short literary texts.
- Vocabulary expansion with a focus on more abstract terms and idiomatic expressions.
- Improving grammatical structures (complex tenses, passive, dependent clauses).
- Writing different types of texts (narrative, descriptive, argumentative).
- **Evaluation of achieved goals:**
- Carrying out periodic evaluations through standardized tests aligned with the educational standards of Baden-Württemberg and Thuringia .
- Implementation of projects that integrate knowledge from different subjects.
- Using portfolios to track individual student progress.

2. **Lesson planning:**
   - **Material planning:**
     - Developing detailed lesson plans for each subject that include:
     - Thematic units aligned with the curriculum .
     - Clearly defined teaching objectives for each unit.
     - Various teaching methods (frontal teaching, group work, individual work, project teaching).
     - Required resources (textbooks, digital tools, laboratory equipment).
     - Implementation of an interdisciplinary approach where contents from different subjects are connected.
     - Incorporating elements of digital learning and media literacy into lesson plans.
   - **Customization:**
     - Developing individualized education plans (IEP) for students with special needs.
     - Preparation of additional materials for advanced students and students who need additional support.
     - Implementation of differentiated teaching that takes into account different learning styles and levels of knowledge.
     - Regular revision and adjustment of lesson plans based on feedback and student progress.

3. **Evaluation:**
   - **Setting evaluation goals:**
     - Defining specific assessment criteria aligned with provincial educational standards.
     - Developing grading rubrics that include:
     - Knowledge and understanding of the material.
     - Application of what has been learned in new situations.
     - Critical thinking and analytical skills.
     - Creativity and innovation in solving problems.
     - Setting clear and measurable goals for each unit and semester.
   - **Track progress:**

HALLO WIR SIND IDSS

- Implementation of a system of continuous monitoring of student progress through:
- Regular short knowledge tests (quizzes, mini-tests).
- Formative assessment during classes.
- Summative assessment at the end of larger teaching units.
- Using digital tools to track progress and analyze learning data.
- Regular meetings of the teachers' council to discuss student progress and necessary interventions.
- Involving students in the process of self-evaluation and setting personal learning goals.

4. **Professional development of teachers:**
   - Organizing regular workshops and seminars for teachers on the latest pedagogical methods and technologies.
   - Encouraging mutual supervision and exchange of experiences among teachers.
   - Establishing a mentoring system for new teachers.

5. **Cooperation with parents and the community:**
   - Organizing regular parent meetings and individual consultations.
   - Involvement of parents in school projects and activities.
   - Developing partnerships with local organizations and businesses to enrich the educational experience of students.

6. **Inclusive education:**
   - Implementation of the principles of inclusive education in all aspects of planning and organization of teaching.
   - Ensuring the necessary support and resources for students with special educational needs.
   - Promotion of a culture of acceptance of diversity among students and teachers.

This expanded approach to teaching planning and organization is aligned with the most up-to-date educational practices and standards applied in Baden-Württemberg and Thuringia . The goal is to create a dynamic and inclusive educational environment that supports the individual development of each student, prepares them for future challenges and nurtures lifelong learning.

5.2. Project works

Project works represent a key element of modern education in the German states of Baden-Württemberg and Thüringen , enabling students to develop key competencies through the practical application of knowledge and skills. This teaching methodology encourages independence, creativity and critical thinking, preparing students for the challenges of the 21st century.

Thematic projects:

1. **Planning and organization of projects:**
   - **Thematic selection:**

HALLO WIR SIND IDSS

        - The selection of projects should be aligned with the educational standards and curriculum of the provinces of Baden-Württemberg and Thüringen .
        - Project topics should be interdisciplinary, connecting different subjects and areas of knowledge (eg STEM projects combining science , technology, engineering and mathematics).
        - Projects should be relevant to the students' real life and local context, encouraging their motivation and engagement.
        - Examples of topics: "Sustainable development in our city", "Digital transformation and its impact on society", "Cultural diversity in Germany".
    - **Types of projects:**
        - Research Projects: Students conduct empirical research on current social, scientific, or environmental issues.
        - Technical projects: Development and creation of functional models or prototypes (eg robotics, 3D printing).
        - Art projects: Creative expression through different media (film, photography, painting, performance).
        - Community-engaged projects: Initiatives that address local problems or community needs.
        - Digital projects: Development of applications, websites or digital content.
        - Language projects: Creation of multilingual materials or organization of cultural exchanges.

2. **Project structure:**
    - **Creating a project plan:**
        - Defining SMART goals (Specific, Measurable, Attainable, Relevant, Time-bound) for each project .
        - Creation of a detailed time plan (Gantt chart) with clearly defined phases and milestones .
        - Distribution of roles and responsibilities within project teams, encouraging the development of leadership skills.
        - Identification of necessary resources (materials, equipment, expertise) and planning of their acquisition.
        - Implementation of agile project management methodologies adapted to the educational context.
    - **Access to research:**
        - Training students on academic integrity and ethical principles of research .
        - Introducing students to different research methods: quantitative (surveys, experiments) and qualitative (interviews, case studies).
        - Using digital tools to collect and analyze data (eg online surveys, statistical software).
        - Development of critical evaluation skills of information sources, especially online content.
        - Collaboration with local universities and research institutes for mentoring and access to resources.

3. **Presentation and evaluation:**

- **Presentation:**
  - Organization of school science fairs and projects open to the public.
  - Implementation of digital platforms for online presentations and virtual exhibitions .
  - Encouraging students to present their projects at regional and national competitions.
  - Using different presentation formats: poster presentations, multimedia presentations, debates, interactive demonstrations.
  - Development of public speaking and communication skills through workshops and exercises.
- **Evaluation:**
  - Implementation of multiple evaluations: self-evaluation , peer evaluation , teacher evaluation and external evaluations (eg industry experts).
  - Using assessment rubrics that cover different aspects of the project: research process, creativity, teamwork, presentation skills, technical performance.
  - Providing constructive feedback through individual and group sessions.
  - Implementation of the portfolio as a tool for continuous monitoring of progress and reflection.

4. **Integration of digital technologies:**
   - Using project management platforms (eg Trello , Microsoft Teams) to plan and track progress.
   - Implementation of virtual laboratories and simulations for projects that require expensive or unavailable resources.
   - Encouraging the use of social media and blogs to document the process and share project results.

5. **Cooperation and partnerships:**
   - Establishing partnerships with local businesses and organizations for mentorship and project support.
   - Organization of interschool project collaborations at the provincial or international level.
   - Involvement of parents and community members as mentors or project evaluators.

6. **Competence development through project work:**
   - Focus on the development of key competencies defined in the educational standards of Baden-Württemberg and Thuringia:
     - Communication skills (presentations, reporting)
     - Digital competences (use of technology in research and presentation)
     - Critical thinking and problem solving
     - Creativity and innovation
     - Cooperation and teamwork
     - Intercultural competences

7. **Adaptation and inclusion:**

HALLO WIR SIND IDSS

- Ensuring that assignments are adaptable to different levels of student ability.
- Implementing Universal Design for Learning (UDL) in project planning to ensure inclusiveness .
- Providing additional support to students with special educational needs through individualized project plans.

8. **Reflection and continuous improvement:**
    - Encouraging students to keep reflective diaries during the project.
    - Organization of sessions to share experiences and lessons learned after the completion of the projects.
    - Regular collection of feedback from students, teachers and partners to improve project teaching.

This extended approach to project work is aligned with the most up-to-date educational practices and standards applied in Baden-Württemberg and Thuringia . The goal is to create a dynamic and stimulating educational environment that prepares students for the challenges of the future, developing their skills of critical thinking, creativity, collaboration and problem solving through a practical and engaging approach to learning.

6. Evaluation and monitoring

In the context of modern education in the German states of Baden-Württemberg and Thüringen , evaluation and monitoring are key components of the educational process. These elements are designed to ensure continuous student progress, provide timely feedback, and allow instructional strategies to be tailored to individual student needs.

6.1. Continuous evaluation

Monitoring student progress throughout the year:

1. **evaluation methods:**
    - **Formative evaluation:**
        - **Quizzes and Tests:**
        - Implementation of regular, short digital quizzes (e.g. via platforms such as Kahoot or Quizizz) to quickly check understanding.
        - Using adaptive tests that adapt to the level of students' knowledge.
        - Application of the concept " exit tickets " at the end of class for a quick review of key concepts.
        - **Homework:**
        - Designing tasks that encourage critical thinking and application of knowledge in real situations.
        - Using online platforms (eg Google Classroom) for assigning and monitoring homework.
        - Implementation of " flipped classroom " model where students independently research topics at home, and in class they focus on discussion and application.
        - **Active participation:**
        - Using digital tools to track participation (eg digital badges for active participation).

        - Implementation of peer -to- peer assessment for group projects and presentations.
        - Organization of debates and discussions that encourage critical thinking and argumentation.
    - **Monitoring work and engagement:**
        - **Student Performance Notes:**
        - Using digital portfolios to document student work and progress.
        - Implementation of a competency monitoring system that enables visualization of progress in various areas.
        - **Trend Analysis:**
        - Application of learning analytics (learning analytics) to identify learning patterns and potential problems.
        - Using predictive models to early identify students who may need additional support.
    - **Self-evaluation and reflection:**
        - **Self-evaluation:**
        - Introduction of digital self-assessment tools (eg online questionnaires for self-reflection).
        - Using rubrics for self-evaluation that are aligned with educational standards.
        - **Reflection:**
        - Implementation of regular " check -in" sessions where students reflect on their learning and set goals.
        - Using digital journals for reflection (eg blog posts or video diaries).
2. **Periodic evaluation:**
    - **Systematic evaluations:**
        - **Periodic tests:**
        - Implementation of standardized tests aligned with the educational standards of Baden-Württemberg and Thuringia .
        - Using computer-adaptive tests that adapt to the level of students' knowledge.
        - **Evaluation of projects:**
        - Application of multidimensional rubrics for evaluation that include technical, creative and collaborative aspects of projects.
        - Organization of exhibitions and presentation of projects with evaluation by industry experts.
    - **Customization of teaching:**
        - **Analysis of results:**
        - Using data analysis software to identify areas where improvement is needed .
        - Implementation of an early warning system that identifies students who need additional support.
        - **Additional support:**
        - Development of personalized learning plans for students who are lagging behind.
        - Implementation of a peer mentoring program for additional support.

6.2. Final grades

Periodic evaluations and final grades at the end of the school year:

1. **Defining evaluation criteria:**
    - **Final grades:**
        - **Criteria:**
        - Development of comprehensive assessment rubrics that include academic skills, socio -emotional competencies, and transversal skills.
        - Implementation of a competency-based scoring system that is aligned with the European Qualifications Framework.
        - **Percentage:**
        - Application of a balanced assessment approach: 40% continuous evaluation , 30% project work, 30% final tests.
        - Introducing a flexible grading system that allows students to choose between different evaluation methods (eg test or project).
    - **Rating Combination:**
        - **Achievement Analysis:**
        - Using data analysis software to objectively combine different assessment components.
        - Implementation of a weighting system that gives more weight to progress and improvement during the year.
2. **Final exams:**
    - **Preparation and performance of final exams:**
        - **Preparation:**
        - Organization of intensive preparatory courses that use active learning methods.
        - Development of online platforms for independent preparation with personalized study plans.
        - **Execution:**
        - Implementation of digital exams that combine traditional testing methods with practical tasks.
        - Using simulations and virtual laboratories to assess practical skills.
    - **Evaluation and analysis of results:**
        - **Analysis:**
        - Application of advanced statistical methods to analyze results and identify areas for improvement curriculum .
        - Using the machine learning algorithms for predicting future academic success and identifying the need for intervention.

6.3. Feedback

Regular feedback to parents and students:

1. **Communication with parents:**
    - **Regular meetings:**
        - **Planning:**
        - Implementation of a flexible system for scheduling meetings through online platforms.
        - Organization of virtual parent meetings for parents who cannot attend in person.
        - **Agenda:**

HALLO WIR SIND IDSS

        - Development of interactive presentations that show student progress in different areas.
        - Using data visualization to clearly represent academic progress and social development.
    - **Progress reports:**
        - **Preparation:**
        - Implementation of digital progress reports that are updated in real time.
        - Development of personalized dashboards for parents that show different aspects of the student's progress.
        - **Format:**
        - Using infographics and interactive elements to clearly present information.
        - Implementation of a system that allows parents to ask questions and receive answers directly through the platform.
2. **Feedback for students:**
    - **Individual feedback:**
        - **Comments:**
        - Implementation of an audio and video feedback system for a more detailed explanation.
        - Using AI-assisted systems to generate personalized recommendations for improvement .
        - **Discussions:**
        - Organizing regular one-on-one mentoring and goal setting sessions.
        - Implementation of a peer feedback system to encourage collaborative learning.
    - **Advice and support:**
        - **Consulting:**
        - Development of an online counseling platform that includes mental health resources and academic support.
        - Implementation of a chatbot system to provide instant support and answers to frequently asked questions.
3. **Consultations and strategies for improvement:**
    - **Development of strategies:**
        - **Strategies for improvement:**
        - Creating personalized learning plans based on learning data analysis.
        - Implementation of gamification elements for motivation and monitoring progress in achieving goals.
    - **Adaptation of teaching:**
        - **Customizing methods:**
        - Using adaptive learning systems that adapt the content and pace of learning to individual needs.
        - Implementation of a student engagement monitoring system that allows teachers to adjust their teaching methods in real time .

Compliance with educational standards:
All elements in section **6. Evaluation and Monitoring** are aligned with the latest educational standards of Baden-Württemberg and Thuringia , with special emphasis on:

- Development of key competencies defined in the educational framework of these provinces.

- Applying the principles of inclusive education and an individualized approach to learning.
- Integration of digital skills and media literacy in the evaluation process .
- Encouraging student independence and developing lifelong learning skills.
- Compliance with the European qualification framework and international education standards.

This comprehensive approach to evaluation and monitoring ensures that the educational process in the schools of Baden-Württemberg and Thuringia is in line with the most modern pedagogical practices, preparing students for the challenges of the 21st century and the globally competitive labor market.

7. Special activities and programs

7.1. Workshops and seminars

Organization of special workshops and seminars:

1. **Goals and purpose of workshops and seminars:**
   - **Development of specific skills:**
     - Organize workshops that focus on the development of key competencies defined in the educational standards of Baden-Württemberg and Thuringia , such as digital literacy, critical thinking, teamwork and intercultural skills.
     - Implement programs that encourage STEM education (Science, Technology, Engineering and Mathematics), in line with Germany's priorities for strengthening these fields.
     - Include workshops that develop " Schlüsselqualifikationen " (key qualifications) such as communication skills, problem-solving abilities and independent learning.
   - **Stimulating interest:**
     - Create diverse workshops that reflect the wide range of " Wahlpflichtfächer " (elective subjects) available in the German education system, allowing students to explore different areas of interest .
     - Organize seminars dealing with current social issues and global challenges, encouraging social responsibility and civic engagement among students.
2. **Planning and organization:**
   - **Topics and Content:**
     - Align the workshop topics with the " Bildungsplan " (educational plan) of Baden-Württemberg and Thuringia , ensuring that the content complements and extends the regular curriculum .
     - To include interdisciplinary topics that reflect the holistic approach to education characteristic of the German system, connecting different subjects and areas of knowledge.
   - **Professional lecturers:**
     - Engage experts from " Bildungspartnerschaften " (educational partnerships) with local companies and institutions, providing students with an insight into the practical application of knowledge.

        - Include visiting lecturers from universities and research institutes, supporting the link between school education and higher education.
    - **Schedule and Duration:**
        - Plan workshops according to the " Ganztagsschule " (all-day school) concept, integrating them into the extended school day.
        - Organize intensive " Projektwoche " (project weeks) focused on specific topics or skills.
    - **Evaluation and feedback:**
        - Implement systematic evaluation in accordance with German standards of quality of education, using quantitative and qualitative methods.
        - Involve students in the evaluation process through " Schülerfeedback ", encouraging their active role in shaping the educational experience.
3. **Fit and Customization:**
    - **Compliance with standards:**
        - Ensure that all activities support the development of competences defined in the " Bildungsstandards " (educational standards) for different subjects and levels of education.
        - Integrate the principles of " individual Förderung " (individual encouragement) in the design of workshops, enabling personalized learning and development.
    - **Adapting to different levels:**
        - Create differentiated activities that correspond to different school types in the German system (Gymnasium , Realschule , Hauptschule), adapting content and methods to the specific educational goals of each school.
        - Develop special programs for students in the " Übergangsstufe " (transition stage) between primary and secondary school, supporting their adaptation to new academic demands.

7.2. Competitions and festivals

Planning participation in competitions and festivals:

1. **Identification of opportunities for participation:**
    - **Local and international events:**
        - Actively seek opportunities to participate in renowned German competitions such as "Jugend forscht " (youth research) for science and technology, or " Bundeswettbewerb Fremdsprachen " (federal foreign language competition).
        - Encourage participation in European and international competitions that promote intercultural understanding and global citizenship, in line with German educational goals.
    - **Selection criteria:**
        - Prioritize competitions that support the development of key competencies defined in the " Bildungsplan ", especially those that encourage innovation, creativity and critical thinking.
        - To select festivals that celebrate cultural diversity and promote inclusion, supporting Germany's educational policy of integration and multiculturalism.
2. **Organization and preparation:**

- **Student preparation:**
  - Implement a structured preparation program that includes " Arbeitsgemeinschaften " (working groups) focused on specific areas of competition.
  - Organize " Probeprüfungen " (trial tests) that simulate competition conditions, helping students develop time and stress management strategies.
- **Logistics and administration:**
  - Ensure that all aspects of participation comply with the " Schulrecht " (school law) of Baden-Württemberg and Thuringia , including obtaining the necessary permits for travel and school absences.
  - Establish clear protocols for " Aufsichtspflicht " (duty of supervision) during travel and participation in events.
- **Team and Mentorship:**
  - Form interdisciplinary teams of teacher-mentors who will provide comprehensive support to students, in accordance with the principle of " ganzheitliche Bildung " (holistic education).
  - Involve " Schulsozialarbeiter " (school social workers) in the preparation process, ensuring emotional and social support for the participants.

3. **Monitoring and evaluation:**
   - **evaluation:**
     - Conduct detailed performance analysis using the " Kompetenzraster " (competency matrix) to assess student progress in key areas.
     - Organize " Reflexionsrunden " (reflective sessions) after the competition, encouraging students to reflect critically on their experience and identify areas for improvement .
   - **Feedback:**
     - Implement a structured feedback system that includes student self-evaluation , peer evaluation, and teacher feedback.
     - Use " Lernentwicklungsgespräche " (talks about learning development) to provide individual feedback and set goals for future development.
4. **Encouraging participation:**
   - **Promotion:**
     - Organize " Informationsabende " (information evenings) for students and parents, presenting opportunities to participate in competitions and festivals.
     - Use school media and platforms to share the successes and experiences of previous participants, inspiring wider involvement.
   - **Motivation:**
     - Establish a recognition system that is consistent with German educational values, emphasizing not only achievement , but also effort, teamwork, and personal development.
     - Integrate achievements in competitions into the school's " Leistungsbewertung " (evaluation system), recognizing them as an important aspect of students' academic and personal development.

Compliance with educational standards:
All special activities must be carefully coordinated with the " Bildungsplan " of Baden-Württemberg and Thuringia , ensuring that they contribute to the development of the competences defined in the national educational standards. This includes a focus on:

- Development of key competences (" Schlüsselkompetenzen ") such as communication, problem solving and independent learning.
- Encouraging interdisciplinary learning and application of knowledge in practical contexts.
- Promotion of the values of democratic citizenship, intercultural understanding and sustainable development.
- Support for individual student development through differentiated approaches to learning and teaching .

Activities should reflect the principles of " Bildungsgerechtigkeit " (educational fairness) and " Chancengleichheit " (equality of opportunity), ensuring that all students, regardless of their background or ability, have access to enriching educational experiences. Through these special programs, schools in Baden-Württemberg and Thuringia strive to create a dynamic and inclusive educational environment that prepares students for success in the global society of the 21st century.

8. Support and additional activities

8.1. Support for students

Individualized help and additional instruction for students with specific educational needs:

1. **Identification and assessment of needs:**
    - **Comprehensive diagnostic assessment:** Implement a systematic approach to identify students who need additional support. This includes the use of standardized tests, classroom observations, analysis of student portfolios, and interviews with students, parents, and teachers. Pay special attention to the early detection of learning difficulties, such as dyslexia, dyscalculia or attention disorders.
    - **Multidisciplinary approach:** Form a team of experts that includes teachers, psychologists, pedagogues and specialists for inclusive education. This team should regularly assess students' needs and develop support strategies.
    - **Individual Education Plans (IEP):** Create detailed, personalized plans for each student who needs additional support. The IEP should contain clearly defined goals, concrete strategies for achieving those goals, time frames, and methods of evaluating progress. Plans should be flexible and regularly revised according to student progress.
2. **Types of support:**
    - **Differentiated teaching:** Implement the principles of differentiated teaching in the regular teaching process. This includes tailoring learning content, processes and products to each student's individual needs, interests and learning styles.
    - **Remedial Education:** Organize structured remedial education programs for students who are lagging behind in certain areas. These programs should be intensive, focused on specific skills or concepts, and led by qualified teachers or specialists.
    - **Mentoring programs:** Establish a peer mentoring system where older or more academically successful students provide support to younger students or those who need help. This not only helps students who need support, but also develops leadership skills in mentors.
    - **Assistive technologies:** Implement the use of assistive technologies for students with special needs. This may include text-to-speech software,

Buka 13 - 71 000 Sarajevo - Bosna i Hercegovina I tel +387 33 560 520 - mob +387 60 345 1275

info@idss.ba I www.idss.edu.ba

organization and planning tools, and specialized devices for students with physical disabilities.
    - **Emotional and social support:** Establish programs for the development of social skills and emotional support. This may include group workshops, individual counselling, and programs to develop resilience and self-confidence.
3. **Progress monitoring and evaluation:**
    - **Continuous formative assessment:** Implement a system of regular formative assessment that enables monitoring of student progress in real time. Use a variety of assessment methods including projects, portfolios , presentations and practical tasks.
    - **Digital monitoring tools:** Use digital platforms to monitor student progress that allow detailed analysis of learning data. These platforms should be accessible to teachers, students and parents, allowing transparency and joint monitoring of progress.
    - **Regular support team meetings:** Organize regular multidisciplinary support team meetings to evaluate student progress and adjust support strategies as needed.
4. **Professional development of teachers:**
    - **Continuous training:** Organize regular training for teachers on the latest methods of inclusive education, differentiation of teaching and support for students with special needs.
    - **Collaborative Learning:** Establish professional learning communities where teachers can share experiences, strategies and resources to support students.

8.2. Working with parents

Partnering with parents for a holistic approach to education:

1. **Structured communication:**
    - **Digital platforms:** Implement a comprehensive digital platform for communication with parents that allows for regular updates on student progress, assignments, and school activities. This platform should be user-friendly and accessible via mobile devices.
    - **Regular Reports:** Create detailed, personalized student progress reports that are sent to parents on a monthly or quarterly basis. These reports should include not only the academic progress, but also the social and emotional development of the student.
    - **Open days:** Organize regular "open days" when parents can visit the school, attend classes and talk directly with teachers.
2. **Educational programs for parents:**
    - **Workshops and Seminars:** Organize a series of educational workshops for parents on topics such as: home learning strategies, social skills development, managing stress and anxiety in children, internet safety, and healthy lifestyles.
    - **Online Resources:** Create an online resource library for parents that includes video tutorials , articles, and interactive guides on various aspects of supporting children's education.
    - **Support groups:** Facilitate the formation of support groups for parents, especially for those whose children have similar challenges or special needs.
3. **Active involvement of parents:**

- **Volunteer Programs:** Develop structured volunteer programs for parents at the school, including teaching assistance, organizing school events, and mentoring.
- **Advisory Councils:** Establish parent advisory councils that play an active role in making decisions related to school policies and programs.
- **Cultural and sports activities:** Organize regular cultural and sports events that involve both parents and students, promoting a sense of community and belonging to the school community.

4. **Support for parents of students with special needs:**
   - **Specialized trainings:** Organize targeted trainings for parents of students with special needs, focusing on specific support strategies and resources available in the community.
   - **Individual Support Plans:** Develop individual support plans for families of students with special needs, including regular meetings with a team of professionals and linkage to external resources and services.
5. **Evaluation and improvement:**
   - **Regular surveys:** Conduct regular surveys among parents to assess their satisfaction and collect ideas for improving cooperation between school and family.
   - **Focus groups:** Organize focus groups with parents in order to deeply explore specific issues and challenges in the educational process.

Compliance with the educational standards of Baden-Württemberg and Thuringia:
All mentioned activities and approaches should be in accordance with the current educational standards and guidelines prescribed by the educational authorities in Baden-Württemberg and Thuringia . Special attention should be paid to:

- The implementation of the principle of inclusive education according to the guidelines of " Gemeinsamer Unterricht " (Community teaching) in Thüringen and " Sonderpädagogische Bildungs - und Beratungszentren " (Special education and counseling centers) in Baden-Württemberg .
- Harmonization of individual education plans with the " Bildungsplan " (Education Plan) of both federal states, ensuring that all students have the opportunity to reach the key competences defined by these plans.
- Apply the principle of " Ganztagsschule " (All-day school) in the organization of additional support and activities for students, integrating academic support with extracurricular activities.
- Regular evaluation and improvement of support programs in accordance with the " Qualitätsrahmen " (Quality Framework) defined by the educational authorities of these federal states.

This comprehensive approach to student support and collaboration with parents ensures that the educational process is carried out in accordance with the highest standards and practices, providing each student with the opportunity for optimal development and success.

9. Administrative aspects

9.1. Organization of classes

Detailed elaboration of administrative procedures, timetables and organization of classes:

1. **Planning and implementation of the teaching schedule:**
   - **Creating a comprehensive class schedule:**
     - Create a detailed timetable for each class, taking into account all compulsory and optional subjects according to the curriculum Baden-Württemberg and Thuringia .
     - Include additional activities, Afternoon Program and extracurricular activities in the schedule.
     - Ensure that the schedule meets the minimum number of hours of instruction prescribed by the education law of these provinces.
   - **Optimizing your schedule for effective learning:**
     - Arrange subjects so that more difficult subjects (e.g. mathematics, natural sciences) are held in the morning when students are most concentrated .
     - Implement "block teaching" for certain subjects, allowing for deeper exploration of topics.
     - Include short breaks between classes for rest and preparation, in accordance with the recommendations of pedagogical experts.
   - **Flexibility and adaptability:**
     - Provide for the possibility of adjusting the schedule in case of unforeseen circumstances (e.g. teacher's illness, school events).
     - Create alternative schedules for special days (eg project days, school field trips).
2. **Administrative procedures and management:**
   - **Student enrollment process:**
     - Establish an online system for registering new students, in accordance with the digital strategy of Baden-Württemberg and Thüringen .
     - Organize information sessions for parents of new students, introducing them to school rules and expectations .
     - Implement an enrollment tracking system that automatically notifies parents of enrollment status.
   - **Communication systems:**
     - Adopt digital platforms for communication between school, students and parents (eg school portal, smartphone applications).
     - Organize regular parent meetings, including options for online presence.
     - Create monthly newsletters with important information and events.

HALLO WIR SIND IDSS

- **Records and documentation management:**
  - Implement a digital system for keeping records of students' grades, attendance and progress.
  - Ensure data security in accordance with the General Data Protection Regulation (GDPR) and local data protection laws.
  - Regularly train staff on the proper handling of sensitive information.

3. **Management of resources and finances:**
   - **Planning and procurement of materials:**
     - Develop an annual plan for the procurement of teaching materials and equipment.
     - Establish an inventory system for monitoring and maintaining school equipment.
     - Implement sustainable practices in the procurement of materials, in accordance with the environmental initiatives of Baden-Württemberg and Thuringia .
   - **Financial management and reporting:**
     - Create a detailed annual budget, taking into account all aspects of school functioning.
     - Establish a system for monitoring expenses and income in real time.
     - Prepare quarterly financial reports for the school board and relevant educational institutions.
4. **Coordination and professional development:**
   - **Formation and management of school teams:**
     - Establish teams for different aspects of school life (eg curriculum team , student welfare team).
     - Organize regular team meetings and ensure effective communication between different groups.
   - **Professional development of staff:**
     - Create an annual professional development plan for teachers and administrative staff.
     - Organize internal workshops and invite external experts for specific topics.
     - Encourage teachers to participate in exchange programs and study visits to other schools in the region.

9.2. Legislative and educational guidelines

Detailed alignment with legislative frameworks and educational standards relevant to schools in Baden-Württemberg and Thuringia:

1. **Implementation of the legislative framework:**
   - **Compliance with local and national laws:**

HALLO WIR SIND IDSS

Buka 13 - 71 000 Sarajevo - Bosna i Hercegovina I tel +387 33 560 520 - mob +387 60 345 1275
SPARKASSE BANK d.d., Sarajevo – 199 499 002 180 9884 I IBAN: BA39 199 499 002 180 9884 I SWIFT (BIC): ABSBBA22
ID broj: 4202220420007 I REG broj: 580342
info@idss.ba I www.idss.edu.ba

        - Regularly review and update school policies in accordance with the latest changes to the Education Act of Baden-Württemberg and Thuringia .
        - Establish a working group for monitoring legislative changes and their implementation in school procedures.
        - Organize annual audits of compliance with relevant laws and regulations.
    - **Data protection and privacy:**
        - Appoint a data protection officer in accordance with the GDPR.
        - Develop a comprehensive data protection policy specific to the school environment .
        - Conduct regular data protection training for all employees, including scenarios specific to the education sector.
2. **Application of educational standards:**
    - **Curriculum development and implementation:**
        - Harmonize the school curriculum with the Bildungsplan of Baden-Württemberg and Thüringer Lehrplan -om.
        - Implement a competency-based approach to teaching, focusing on the development of key competencies defined in educational standards.
        - Regularly evaluate and update the curriculum in accordance with the latest pedagogical research and guidelines of the provincial ministries of education.
    - **Ensuring the quality of teaching:**
        - Establish a system of regular supervision and peer review among teachers.
        - Implement standardized evaluations of teaching by students and parents.
        - Develop a plan for continuous improvement of teaching based on collected feedback and student results.
    - **Reporting and Accreditation:**
        - Prepare annual school progress reports in accordance with the requirements of the Schulamt (school administration) of Baden-Württemberg and Thuringia .
        - Participate in the process of external school evaluation (Schulinspektion) every 4-5 years.
        - Maintain accreditations and certifications relevant to specific educational programs (eg bilingual teaching certifications).
3. **Development and implementation of school protocols and guidelines:**
    - **Creating comprehensive school policies:**
        - Develop a detailed rulebook on student behavior in accordance with the principles of positive discipline.
        - Establish clear procedures for resolving conflicts and preventing violence at school.

HALLO WIR SIND IDSS

        - inclusive education policies , ensuring support for students with special needs.
    - **Safety and Health:**
        - Implement a comprehensive school safety plan, including emergency procedures.
        - Develop protocols for student mental health promotion and stress prevention.
        - Establish a healthy eating program in the school canteen in accordance with nutritional guidelines.
    - **Monitoring and evaluation:**
        - Establish an internal monitoring system to monitor the implementation of school policies and procedures.
        - Organize annual school self- evaluations , including all aspects of school life.
        - Create action plans for improvement based on the results of monitoring and evaluation .

Ensuring compliance with educational standards:
All administrative practices and procedures must be fully aligned with the educational standards and legal frameworks of Baden-Württemberg and Thuringia . This entails:

- Regular updating of school documents and procedures in accordance with the latest guidelines of the provincial ministries of education.
- Active participation in professional networks and associations of schools at the provincial level in order to exchange best practices.
- Implementation of a quality management system specific to the education sector (eg Q2E - Qualität durch Evaluation und Entwicklung).
- Continuous education of administrative staff on the latest trends in educational management.

This comprehensive approach to administrative aspects ensures that the Internationale Deutsche Schule Sarajevo not only fulfills its obligations, but also provides an optimal environment for learning and student development, in accordance with the highest standards of education in Baden-Württemberg and Thuringia .

HALLO WIR SIND IDSS
